# 1 Introduction

## 1.1 Document Overview

The NPAC SMS Interoperable Interface Specification contains the information model for the Number Portability Administration Center and Service Management System (NPAC SMS) mechanized interfaces. Both Service Order Activation (SOA) and Local Service Management System (LSMS or Local SMS) interfaces to the NPAC SMS are described in this document.

## 1.2 How To Use This Document

*The NPAC SMS Interoperable Interface Specification* contains the following sections:

Section 1 **Introduction** -- This section describes the conventions and organization of this document. It also lists related documentation.

Section 2 **Interface Overview** -- This section contains an overview of protocol requirements and a brief description of the functionality provided in each interface.

Section 3 **Hierarchy Diagrams** -- This section contains the class hierarchy diagrams for all managed objects defined in the interoperable interface.

Section 4 **Interface Functionality to CMOP Definition Mapping** -- This section contains the mapping of the interface functionality to the managed objects, attributes, actions, and notifications.

Section 5 **Secure Association Establishment** -- This section contains information on secure association establishment

Section 6 **GDMO Definitions** -- This section contains the GDMO interface definitions supporting the SOA to NPAC SMS interface and the NPAC SMS to Local SMS interface

Section 7 **General ASN.1 Definitions** -- This section contains the ASN.1 definitions that support the GDMO definitions in Section 7.

Section 8 **Subscription Version Status** -- This section contains a Subscription Version Status diagram, which illustrates the transition from one subscription version state to another.

Appendix A **Errors** -- This appendix contains the valid errors associated with CMISE confirmed primitives used in the interoperable interface definitions.

Appendix B **Message Flow Diagrams** -- This appendix contains the message flow diagrams.

Appendix C **Midwest Region Number Pooling Message Flow Diagrams** -- This appendix is deleted in Release 3.0.0.

## 1.3 Document Numbering Strategy

Starting with Release 2.0 the documentation number of the IIS document will be Version X.Y.Z as follows:

X – will only be incremented when a new major release of the NPAC SMS system is

---

authorized. It will contain only the Change Orders that have been authorized for inclusion in this new major release.

Y – will only be incremented when a new sub-release of an existing release X is authorized. It will contain only the Change Orders that have been authorized for inclusion in this new sub-release.

Z – will be incremented when documentation only clarifications and/or backward compatibility issues or other deficiency corrections are made in the IIS and/or FRS. This number will be reset to 0 when Y is incremented.

For example, the first release of the Release 2 IIS will be numbered 2.0.0. If documentation only clarifications are introduced in the next release of the IIS document it will be numbered 2.0.1. If requirements are added to Release 2.0 that require NPAC SMS software changes then the next release of the IIS document will be numbered 2.1.0. This number scheme is intended to make the mapping between NPAC SMS and the FRS and IIS documentation consistent.

## 1.4 Document Version History

### 1.4.1 Release 1.0

**NANC Version 1.0, released on 04/07/97, contains changes from the ICC Subcommittee IIS Version 1.1.5.**

**NANC Version 1.1, released on 05/08/97, contains changes from the NANC IIS Version 1.0.**

**NANC Version 1.2, released on 05/25/97, contains changes from the NANC IIS Version 1.1.**

**NANC Version 1.3, released on 07/09/97, contains changes from the NANC IIS Version 1.2.**

**NANC Version 1.4, released on 08/08/97, contains changes from the NANC IIS Version 1.3.**

**NANC Version 1.5, released on 09/09/97, contains changes from the NANC IIS Version 1.4.**

**NANC Version 1.6, released on 11/12/97, contains changes from the NANC IIS Version 1.5.**

**NANC Version 1.7, released on 12/12/97, contains changes from the NANC IIS Version 1.6.**

**NANC Version 1.8, released on 2/11/98, contains changes from the NANC IIS Version 1.7.**

**NANC Version 1.9, released on 5/13/98, contains changes from the NANC IIS Version 1.8.**

**NANC Version 1.10, released on 7/8/98, contains changes from the NANC IIS Version 1.9.**

### 1.4.2 Release 2.0

**NANC Version 2.0.0, released on 12/14/98, contains changes from the NANC IIS Version 1.10.**

**NANC Version 2.0.1, released on 2/25/99, contains changes from the NANC IIS Version 2.0.0.**

**NANC Version 2.0.2, released on 9/1/99, contains changes from the NANC IIS Version 2.0.1.**

### 1.4.3 Release 3.0

**NANC Version 3.0.0, released on 1/28/00 and 2/14/00 (revised version), contains changes from the NANC IIS Version 2.0.2.**

**NANC Version 3.0.1, released on 6/6/00, contains the following changes from the NANC IIS Version 3.0.0:**

- **Change Order** NANC 303 – R3 IIS documentation-only updates
- **Change Order** NANC 309 – Block Transition Diagram in FRS and IIS

**[NANC Version 3.0.2, released on 9/11/00, contains the following changes from the NANC IIS Version 3.0.0:](#)**

- [Updated Part 2 IIS Flow diagrams](#)

## 1.6 Abbreviations/Definitions

A-PDU	Application Protocol Data Unit
ASN.1	Abstract Syntax Notation 1
BER	Basic Encoding Rules
CARE	Customer Account Record Exchange
Central Time (standard/daylight)	This is the time in the central time zone, which includes daylight savings time. It changes twice a year based on standard time and daylight savings time. The NPAC SMS runs on hardware that uses this time.
CER	Canonical Encoding Rules
CLASS	Custom Local Area Signaling Services
CME	Conformance Management Entity
CMIP	Common Management Information Protocol
CMISE	Common Management Information Service Element
CNAM	Caller Id with Name
GDMO	Generalized Definitions of Managed Objects
DER	Distinguished Encoding Rules
DES	Data Encryption Standard
FR	Frame Relay
IEC	International Electrotechnical Commission
ISO	International Organization of Standardization
ISVM	Inter-Switch Voice Mail
LIDB	Line Information Database
LNP	Local Number Portability
LRN	Location Routing Number
LSMS	Local Service Management System
LSPP	Local Service Provider Portability
MAC	Media Access Control
MD5	Message Digest (Version 5)
MIB	Management Information Base
NE	Network Element
NMF	Network Management Forum
NPAC SMS	Number Portability Administration Center and Service Management System
NPA	Numbering Plan Area
NXX	Exchange
OCN	Operating Company Number
OSI	Open Systems Interconnect
PPP	Point-To-Point Protocol
RFP	Request for Proposal
RSA	Encryption Scheme
SOA	Service Order Activation
SMS	Service Management System
TMN	Telecommunications Management Network
TN	Telephone Number
WSMSC	Wireless Short Message Service Center

## 2 Interface Overview

### 2.1 Overview

This specification defines the interfaces between the NPAC SMS and the service providers' Service Order Entry System and Local SMS. The interfaces, defined using the CMIP protocol, are referred to as the SOA to NPAC SMS interface and the NPAC SMS to Local SMS interface respectively. CMISE M-CREATE, M-DELETE, M-SET, M-GET, M-EVENT-REPORT, and M-ACTION primitives are fully supported in a confirmed mode. Thus, the sequencing of operations is implied by the receipt of the confirmation or operation response, and NOT by the sequence that the operation request is received. The relationship from the SOA to the NPAC SMS and from the Local SMS to NPAC SMS is a manager to agent or an agent to manager relationship depending on the function being performed. The SOA and Local SMS interfaces are defined by Association Functions. These functions allow each association to define the services it supports. Association establishment from the SOAs and Local SMSs to the NPAC SMS, Association Function and security for each of these interfaces is discussed in Section 5, *Secure Association Establishment*.

Note: The M-CANCEL-GET primitive may not be supported in some NPAC SMS implementations due to the fact that this functionality was not determined necessary for the interface defined.

The sections that follow provide an overview of protocol requirements and a brief description of the functionality provided in each interface. Complete functional descriptions for the interfaces are provided in the process flow diagrams in Appendix B, *Message Flow Diagrams*, as well as the behavior for the managed objects.

The interface between the SOA and the NPAC SMS is called the "SOA to NPAC SMS interface". The interface between the Local SMS and the NPAC SMS is called the "NPAC SMS to Local SMS interface". No direction for operations is implied by the names of these interfaces.

All timestamps (GeneralizedTime fields) that are sent over the SOA to NPAC SMS interface and NPAC SMS to Local SMS interface, shall use Greenwich Mean Time (GMT). The universal time format (YYYYMMDDHHMMSS.0Z) is used. The default value is a non-specific format of 00000000000000.0Z.

### 2.2 OSI Protocol Support

The SOA to NPAC SMS and NPAC SMS to Local SMS interfaces must be implemented over the protocol stack shown in Exhibit 1.

*Exhibit 1. NPAC/SMS Primary Network Protocol Stacks*

Layer	Mechanized Interface	Function
7	CMIP Agent Server CMISE, ACSE, ROSE	User Application
6	ANSI T1.224	Presentation
5	ANSI T1.224	Session
4	TCP, RFC1006, TPO	Transport
3	IP	Network

Layer	Mechanized Interface	Function
2	PPP, MAC, FRAME Relay, ATM (IEEE 802.3)	Link
1	DS-1, DS-0 x n, ISDN, V.34	Physical

Multiple associations per service provider to the NPAC SMS can be supported. The secure association establishment is described in *Section 5*.

### 2.3 SOA to NPAC SMS Interface

The SOA to NPAC SMS interface, which allows communication between a service provider's Service Provisioning Operating Systems and/or Gateway systems and the NPAC SMS, supports the retrieval and update of subscription, service provider, and network information. The following transactions occur to support local number portability functionality:

- SOA requests for subscription administration to the NPAC SMS and responses from the NPAC SMS to the SOA.
- Audit requests from the SOA to the NPAC SMS and responses from the NPAC SMS to the SOA.
- Notifications from the NPAC SMS to the SOA of subscription version data and number pool block data changes, needed for concurrence or authorization for number porting, conflict-resolution, cancellation, outage information, customer disconnect dates, or the first use of an NPA-NXX.
- Network data from the NPAC SMS to SOA.
- Service provider data administration from the SOA to the NPAC SMS.
- SOA requests for number pool block administration (creation and modification) to the NPAC SMS and responses from the NPAC SMS to the SOA.

Mapping of this functionality into the CMIP Definitions is provided in *Section 4 (see Exhibit 8.)* The NPAC SMS currently uses a 32-bit signed integer for the Naming ID Value. The maximum value is  $(2^{31} - 1)$  or 2.14B. It is anticipated that all Service Providers will be able to successfully handle Naming ID Values up to this maximum. Additionally, it should be noted that there is NOT any rollover strategy (NANC 147), once this number is attained within the NPAC SMS.

#### 2.3.1 Subscription Administration

Service provider subscription administration functionality includes the capability to:

- Create a subscription version
- Cancel a subscription version
- Acknowledge cancellation of a subscription version
- Modify a subscription version or range of versions
- Retrieve a specific subscription version or range of versions
- Activate a version or range of versions
- Disconnect a subscription version or range of versions
- Place a subscription into conflict
- Remove a subscription version from conflict

#### 2.3.2 Audit Requests

Audit functionality allows the SOAs to request audits for a subscription version or group of subscription versions based on a Telephone Number (TN) for a specified service

---

provider or all service provider networks. The requesting SOA receives discrepancy reports as they are found in the network. Upon audit completion it receives a notification of the success or failure of the audit and the total number of discrepancies found.

### 2.3.3 Notifications

SOAs are sent notifications to ensure that they are fully informed of relevant events for their subscriptions. Notification of creation, deletion, or data value changes for subscription versions will be sent to the SOA as they occur. Notification will be sent to the SOA if the service provider has not authorized transfer of service for a TN in the amount of time specified in the “Service Provider Concurrence Interval” defined on the NPAC. This notification will indicate to the service provider that authorization is needed for the pending subscription version. If the service provider has not acknowledged version cancellation within a timeframe specified by the NPAC SMS, notifications will be sent requesting cancellation acknowledgment. The donor service provider SOA is notified of the customer’s disconnect date. SOA systems are also sent notifications to ensure they are aware of planned down time in the NPAC SMS. Notification of data value changes and object creations are sent for number pool block objects.

First usage notifications are also sent to the SOA when the first use of an NPA-NXX occurs from a subscription version or number pool block creation.

Notifications can be recovered by the SOA from the NPAC SMS. Notifications to be recovered are requested by time range.

### 2.3.4 Service Provider Data Administration

Service providers can use, read, and update their service provider information on the NPAC SMS using the SOA. Service providers can update information in the service provider profile as well as add and delete their own network data. Changes to network data that result in mass updates are prevented from the SOA to the NPAC. Mass changes must be initiated by the service provider contacting the NPAC personnel directly.

### 2.3.5 Network Data Download

When network data (NPA-NXX, NPA-NXX-X, Service Provider, or LRN data for service providers) is created, modified, or deleted on the NPAC SMS, the data is automatically downloaded from the NPAC SMS to the SOA. The SOA may request that data be recovered using a recovery request that is sent from the SOA to the NPAC SMS. The SOA then receives the data to be recovered in the request response. Network data to be recovered can be requested based on a time range, service provider or all service providers, an NPA-NXX range or all NPA-NXX data, an NPA-NXX-X range or all NPA-NXX-X data, an LRN range or all LRN data, or all network data can be requested. If all network data is specified and the “NPAC Customer SOA NPA-NXX-X Indicator” has been set to TRUE in the service provider’s profile on the NPAC SMS, then NPA-NXX-X object data will be included in the recovery response.

Service providers can also directly read data they wish to download from the NPAC SMS MIB.

### 2.3.6 Number Pool Block Administration

Number pool blocks are a set of 1000 TNs represented by a 7 digit NPA-NXX-X (i.e. 555-333-1 represents 555-333-1000 through 1999). Service providers can create and modify the number pool blocks for which they are the block holder. Service providers can query all number pool block objects. Only the NPAC Personnel can initiate the removal of a number pool block object.

## 2.4 NPAC SMS to Local SMS Interface

The NPAC SMS to Local SMS interface is used for communications between a service provider's Local SMS and the NPAC SMS for support of LNP network element provisioning. The following transactions occur to support Local Number Portability:

- Subscription version, number pool block and network data from the NPAC SMS to the Local SMS.
- Service provider data administration from the Local SMS to the NPAC SMS.
- Notifications from the NPAC SMS to the Local SMS of planned NPAC SMS outages and the first use of a new NPA-NXX.

Mapping of this functionality into the CMIP Definitions is provided in *Section 4 (see Exhibit 8.)* The NPAC SMS currently uses a 32-bit signed integer for the Naming ID Value. The maximum value is  $(2^{31} - 1)$  or 2.14B. It is anticipated that all Service Providers will be able to successfully handle Naming ID Values up to this maximum. Additionally, it should be noted that there is NOT any rollover strategy (NANC 147), once this number is attained within the NPAC SMS.

### 2.4.1 Subscription Version, Number Pool Block and Network Data Download

When network data (NPA-NXX, NPA-NXX-X or LRN data for service providers) or subscription data or number pool block data is created, modified, or deleted on the NPAC SMS, the data is automatically downloaded from the NPAC SMS to the Local SMS. The Local SMS may request that data be recovered using a recovery request that is sent from the Local SMS to the NPAC SMS. The Local SMS then receives the data to be recovered in the request response. Subscription data to be recovered can be requested based on time range, a TN, or a TN range. If the "NPAC Customer LSMS EDR Indicator" is set to TRUE in the service provider's profile on the NPAC SMS, only number pool block data will be sent and no subscription versions with LNP type set to 'pool' will be sent. Number pool block data to be recovered can be requested by time-range, NPA-NXX-X or NPA-NXX-X range. Network data to be recovered can be requested based on a time range, service provider or all service providers, an NPA-NXX range or all NPA-NXX data, an NPA-NXX-X range or all NPA-NXX-X data, an LRN range or all LRN data, or all network data can be requested. If all network data is specified and the "NPAC Customer LSMS NPA-NXX-X Indicator" has been set to TRUE in the service provider's profile on the NPAC SMS, then NPA-NXX-X object data will be included in the recovery response.

Service providers can also directly read data they wish to download from the NPAC SMS MIB.

### 2.4.2 Service Provider Data Administration

Service providers can use, read, and update their service provider information on the NPAC SMS using the Local SMS to NPAC SMS interface. Service providers can update information in the service provider profile as well as add and delete their own network data. Changes to network data that result in mass updates are prevented by the NPAC SMS to Local SMS interface. Mass changes must be initiated by the service provider contacting the NPAC personnel directly.

### 2.4.3 Notifications

Local SMSs are sent notifications to ensure they are aware of planned down time in the NPAC SMS. Local SMSs are also sent notifications when a new NPA-NXX is to be used

for the first time in a subscription version or number pool block by a serviceProvNPA-NXX-X creation.

Notifications can be recovered by the Local SMS from the NPAC SMS. Notifications to be recovered are requested by time range.

## 3 *Hierarchy Diagrams*

### 3.1 Overview

The following five exhibits show the class hierarchy diagram for all managed objects (*Exhibit 2*), Log Record Objects (*Exhibit 3*), the Local SMS (*Exhibit 4*), the NPAC SMS naming hierarchies for the Local SMS (*Exhibit 5*), the SOA (*Exhibit 6.*), and the NPAC SMS naming hierarchies for the SOA. (*Exhibit 7*). These exhibits will help the user gain a better understanding of the structure of the interface definitions provided.

#### 3.1.1 Managed Object Model Inheritance Hierarchy

The Managed Object Model Inheritance Hierarchy shows the inheritance hierarchy used for object definitions in the NPAC SMS to Local SMS and the SOA to NPAC SMS interfaces.

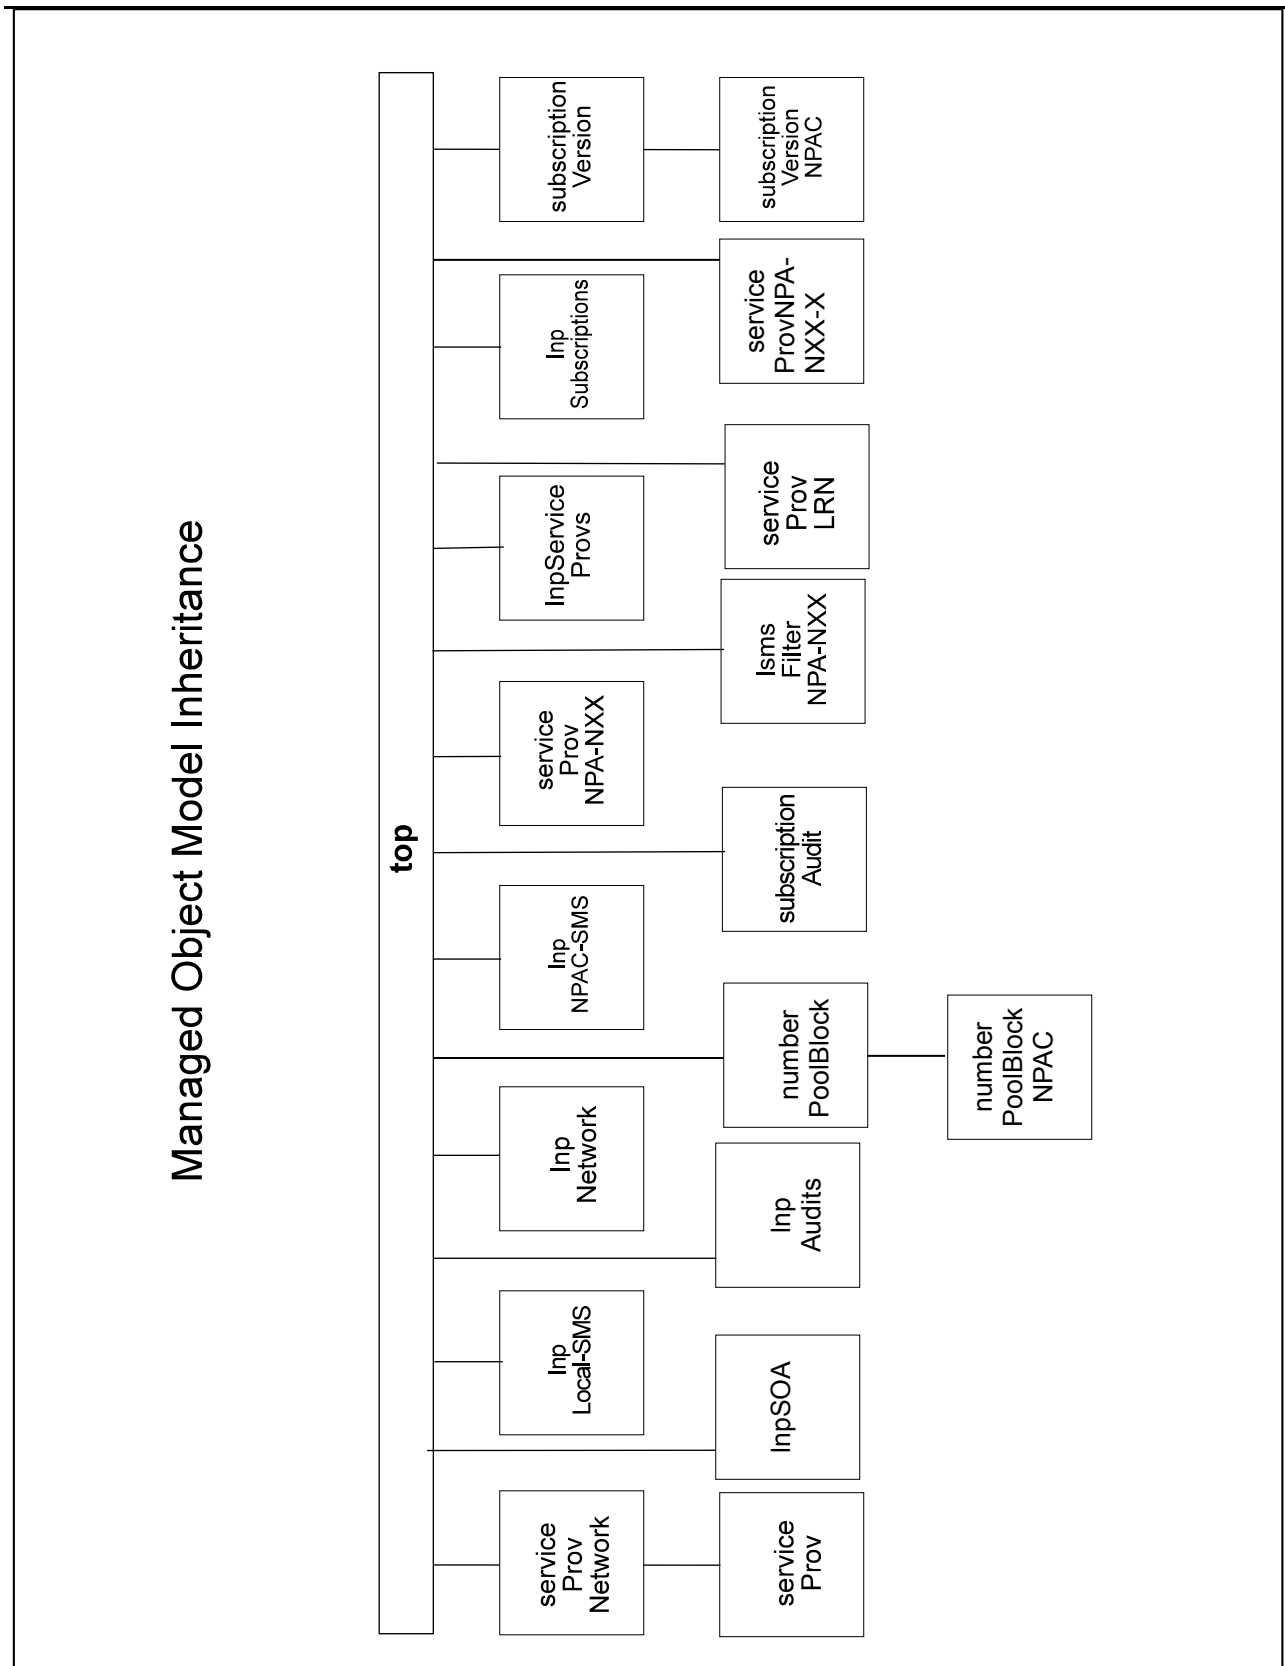

Exhibit 2. The Managed Object Model Inheritance Hierarchy

3.1.2 Log Record Managed Object Hierarchy

The Log Record Managed Object Hierarchy shows the inheritance hierarchy of the log records used in the NPAC SMS to Local SMS and SOA to NPAC SMS interfaces.

*Exhibit 3 . Log Record Managed Object Hierarchy*

3.1.3 NPAC SMS to Local SMS Naming Hierarchy for the NPAC SMS

The NPAC SMS to Local SMS Naming Hierarchy for the NPAC SMS shows the naming hierarchy used in the NPAC SMS to instantiate objects defined in the NPAC SMS to Local SMS interface.

Shaded objects are instantiated at NPAC SMS start-up and are not created via M-CREATE or M-DELETE requests. All other objects are created at start-up from a persistent object store on the NPAC SMS or from actions taken while the NPAC SMS is running.

Each object class belongs to one or more Association Functions. Refer to *Section 5.2.1.8, Association Functions*.

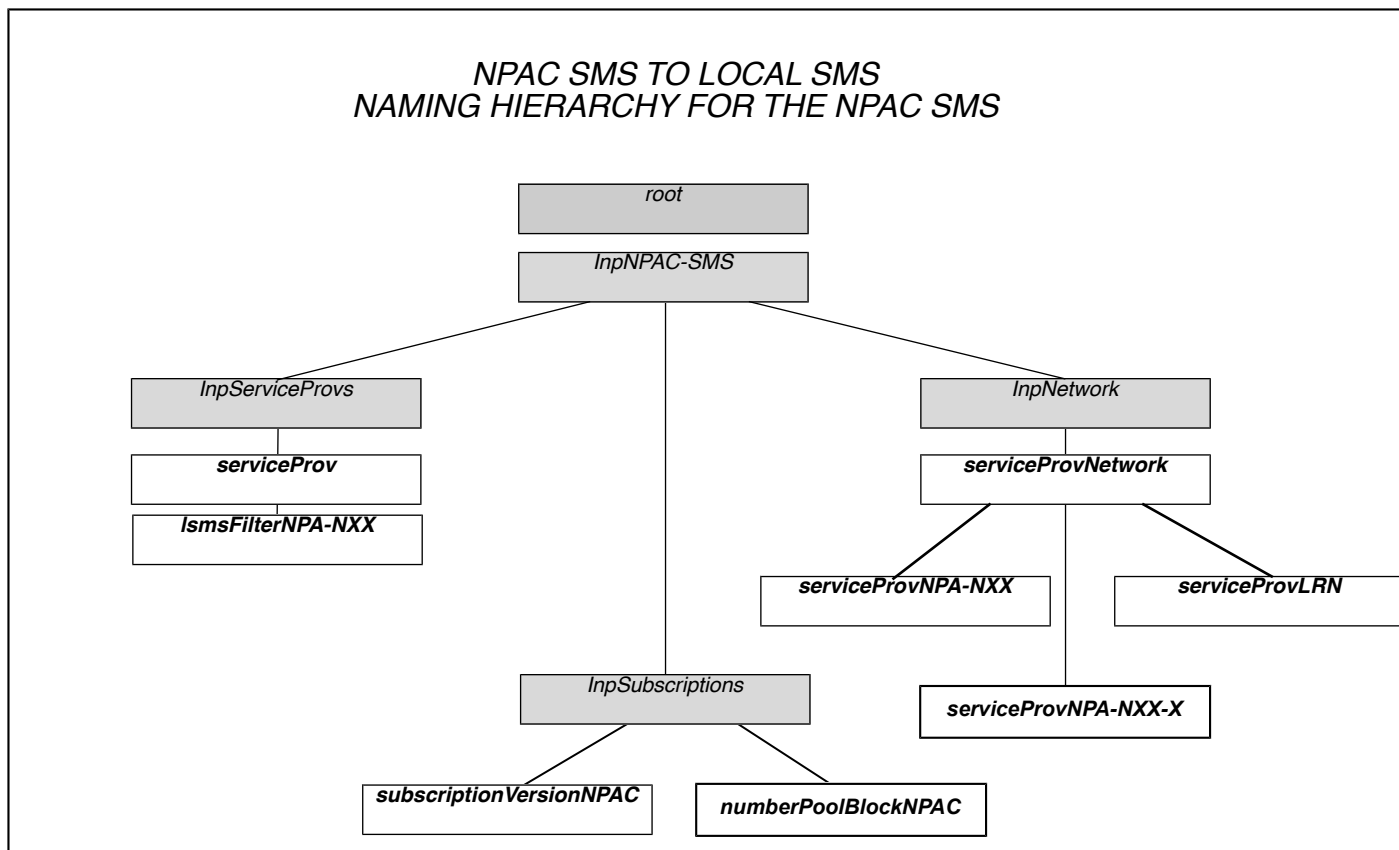

Exhibit 4. The NPAC SMS to Local SMS Naming Hierarchy for the NPAC SMS.

### 3.1.4 NPAC SMS to Local SMS Naming Hierarchy for the Local SMS

The NPAC SMS to Local SMS Naming Hierarchy for Local SMS shows the naming hierarchy used in the Local SMS to instantiate objects defined in the NPAC SMS to Local SMS interface.

Shaded objects are instantiated at Local SMS start-up and are not created via M-CREATE or M-DELETE requests. All other objects are created at start-up from a persistent object store on the Local SMS or from actions taken while the Local SMS is running.

Each object class belongs to one or more Association Functions.

Refer to *Section 5.2.1.8, Association Functions*.

*Exhibit 5. The NPAC SMS to Local SMS Naming Hierarchy for the Local SMS.*

3.1.5 SOA to NPAC SMS Naming Hierarchy for the NPAC SMS

The SOA to NPAC SMS Naming Hierarchy for the NPAC SMS shows the naming hierarchy used in the NPAC SMS to instantiate objects defined in the SOA to NPAC SMS interface.

Shaded objects are instantiated at NPAC SMS start-up and are not created via M-CREATE or M-DELETE requests. All other objects are created at start-up from a persistent object store on the NPAC SMS or from actions taken while the NPAC SMS is running.

Each object class belongs to one or more Association Functions.  
Refer to *Section 5.2.1.8, Association Functions*.

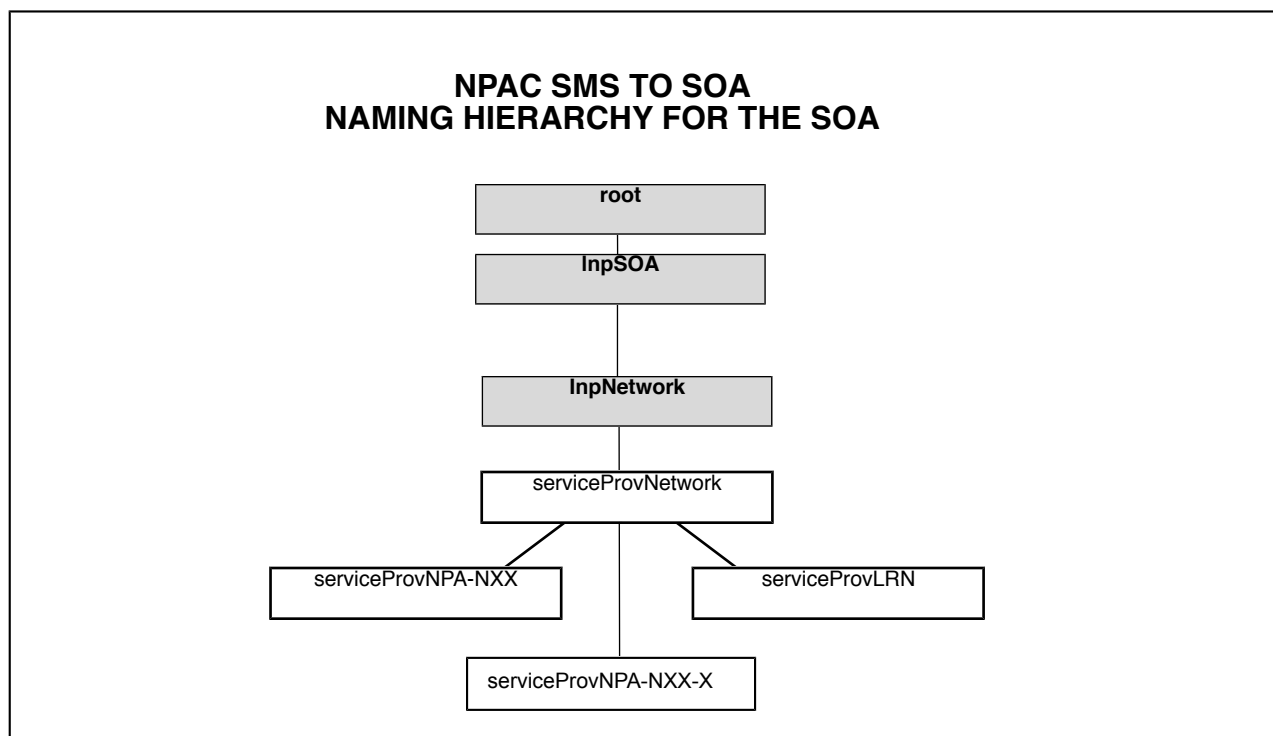

Exhibit 6. The SOA to NPAC SMS Naming Hierarchy for the NPAC SMS.

### 3.1.6 NPAC SMS to SOA Naming Hierarchy for the SOA

The NPAC SMS to SOA Naming Hierarchy for SOA shows the naming hierarchy used in the SOA to instantiate objects defined in the SOA to NPAC SMS interface.

Shaded objects are instantiated at SOA start-up and are not created via M-CREATE or M-DELETE requests. All other objects are created at start-up from a persistent object store on the SOA or from actions taken while the SOA is running.

Each object class belongs to one or more Association Functions.  
Refer to Section 5.2.1.8, Association Functions.

*Exhibit 7. NPA SMS to SOA Naming Hierarchy for the SOA.*

## 4 Interface Functionality to CMIP Definition Mapping

### 4.1 Overview

The following tables, Exhibits 8-12, contain the mapping of the interface functionality to managed objects, attributes, actions, and notifications.

#### 4.1.1 Primary NPAC Mechanized Interface Operations

The primary interface functions in support of the NPAC requirements are described in the table below, as well as their corresponding Common Management Information Exchange (CMISE) operation and referenced object type for that operation. This table does not include miscellaneous operations, such as service provider network data querying or downloading, etc. These functions are described in the object behaviors in the GDMO source below.

*Exhibit 8. Primary NPAC Mechanized Interface Operations Table*

Function	Direction (To/From)	CMIP Operation	Referenced Object Type
Abort/Cancel Audit Request	from SOA	M-DELETE	subscriptionAudit
Audit Complete	to SOA	M-EVENT-REPORT: subscriptionAuditResults	subscriptionAudit
Audit Discrepancy	to SOA	M-EVENT-REPORT: subscriptionAuditDiscrepancyRpt	subscriptionAudit
Audit Query	from SOA	M-GET	subscriptionAudit
Audit Request SOA	from SOA	M-CREATE	subscriptionAudit
Cancellation Acknowledgement	from SOA (new service provider)	M-ACTION: subscriptionVersionNewSP-CancellationAcknowledge	InpSubscriptions
Cancellation Acknowledgement	from SOA (old service provider)	M-ACTION: subscriptionVersionOldSP-CancellationAcknowledge	InpSubscriptions
Conflict Removal	from SOA (new service provider)	M-ACTION: subscriptionVersionRemoveFromConflict	InpSubscriptions
Customer Disconnect Date	to SOA	M-EVENT-REPORT: subscriptionVersionDonorSP-CustomerDisconnectDate	subscriptionVersionNPAC
Final Request for Version Create	to SOA (old service provider)	M-EVENT-REPORT: subscriptionVersionOldSP-FinalConcurrenceWindowExpiration	subscriptionVersionNPAC

Function	Direction (To/From)	CMIP Operation	Referenced Object Type
LSMS Filter NPA-NXX Create	from LOCAL SMS or from SOA	M-CREATE	lsmsFilterNPA-NXX
LSMS Filter NPA-NXX Delete	from LOCAL SMS or from SOA	M-DELETE	lsmsFilterNPA-NXX
LSMS Filter NPA-NXX Query	from LOCAL SMS or from SOA	M-GET	lsmsFilterNPA-NXX
Network Data Download	from LOCAL SMS or from SOA	M-ACTION: InpDownload  or M-GET: scoped and filtered for intended serviceProvLRN, serviceProvNPA-NXX serviceProvNPA-NXX-X, service provider attributes	InpNetwork
Network Data Update	from LOCAL SMS or from SOA	M-CREATE	serviceProvLRN, serviceProvNPA-NXX
NPA-NXX-X Create	to LOCAL SMS or to SOA	M-CREATE;	serviceProvNPA-NXX-X
NPA-NXX-X Delete	to LOCAL SMS or to SOA	M-DELETE	serviceProvNPA-NXX-X

Subscription	to LOCAL SMS	M-GET:	InpSubscriptions

Function	Direction (To/From)	CMIP Operation	Referenced Object Type
Version Query		scoped and filtered for intended subscriptionVersion criteria	

#### 4.1.2 Managed Object Interface Functionality

The table below contains the mapping of the SOA to NPAC SMS and the Local SMS to NPAC SMS managed objects to the interface functionality.

**Exhibit 9. Managed Object Interface Functionality Table**

Managed Object Name	Interface Functionality Mapping
InpAudits	Container object used to contain all subscription audit objects on the NPAC SMS and the Local SMS. It is used in the SOA to NPAC SMS interface to support audit functionality.
InpLocal SMS	Container object used to contain all objects on a Local SMS. It is used in the NPAC SMS to Local SMS interface to support NPAC SMS communication to the service provider Local SMS system.
InpLogAudit-DiscrepancyRptRecord	Object used to log information from a subscriptionAudit-DiscrepancyRpt notification.
InpLogAuditResultsRecord	Object used to log information from a subscriptionAuditResults notification.
InpLogCancellation AcknowledgeRequest Record	Object used to log information from a subscriptionVersionCancellationAcknowledgeRequest notification.
InpLogDonorSP-CustomerDisconnectDate Record	Object used to log information from a subscriptionVersionDonorSP-CustomerDisconnectDate notification.
InpLogLocalSMS-ActionResultsRecord	Object used to log information from a subscriptionVersionLocalSMS-ActionResults notification.
InpLogNewNPA-NXXRecord	Object used to log information from a subscriptionVersionNewNPA-NXX notification.
InpLogNewSP-CreateRequestRecord	Object used to log information from a subscriptionVersionNewSP-CreateRequest notification.
InpLogNumberPoolBlockStatusAttributeValueChangedRecord	Object used to log information from a numberPoolBlockStatusAttributeValueChanged notification.
InpLogOldSP-ConcurrenceRequestRecord	Object used to log information from a subscriptionVersionOldSP-ConcurrenceRequest notification.
InpLogOldSP-FinalConcurrenceWindowExpiration	Object used to log information from a subscriptionVersionOldSP-FinalConcurrenceWindowExpiration notification.
InpLogOperational-InformationRecord	Object used to log information from a InpNPAC-SMS-Operational-Information notification.
InpLogStatusAttributeValueChangedRecord	Object used to log information from a subscriptionVersionStatusAttributeValueChanged notification.
InpNetwork	Container object used to contain all service provider network data on the NPAC

Managed Object Name	Interface Functionality Mapping
	SMS, SOA, and Local SMS. It is used in the NPAC SMS to Local SMS and SOA to NPAC SMS interfaces to support downloading of network data to the Local SMS and/or SOA and the functionality that allows service providers to create/delete their network data on the NPAC SMS.
InpNPAC-SMS	Container object used to contain all objects on a NPAC SMS. It is used in the NPAC SMS to Local SMS and SOA to NPAC SMS interfaces to support NPAC SMS communication from the service provider Local SMS and the SOA systems.
InpServiceProvs	Container object used to contain all service provider data on the NPAC SMS. It is used in the NPAC SMS to Local SMS interface and SOA to NPAC SMS interface to support retrieving of service provider data by the Local SMS and/or SOA and the functionality that allows service providers to update their service provider data on the NPAC SMS. Service providers can only retrieve their service provider data.
InpSOA	Container object used to contain all objects on a SOA. It is used in the SOA to NPAC SMS interface to support NPAC SMS communication to the service provider SOA system.
InpSubscriptions	Container object used to contain all subscription versions and number pool blocks on the NPAC SMS and the Local SMS. It is used in the NPAC SMS to Local SMS and SOA to NPAC SMS interfaces to support query of subscription and number pool block data on the NPAC SMS and downloading of subscription and number pool block data to the Local SMS.
lsmsFilterNPA-NXX	Object used to represent the NPA-NXX values for which a service provider does not want to be informed of subscription version broadcasts.
numberPoolBlock	Object used to represent a number pool block on the Local SMS. These objects are used to support number pool block download from the NPAC SMS to the EDR Local SMS using the NPAC SMS to Local SMS interface.  Local SMS may support this object by setting the “NPAC Customer LSMS EDR Indicator” to TRUE in their service provider profile on the NPAC SMS.
numberPoolBlockNPAC	Object used to represent a number pool block on the NPAC SMS. These objects are used to support number pool block administration from the SOA using the SOA to NPAC SMS interface. Capability is provided to the SOA for creation and modification. The NPAC SMS can create, modify and delete.
serviceProv	Object used to represent a service provider and its associated data on the NPAC SMS. These objects are used in the NPAC SMS to Local SMS and SOA to NPAC SMS interfaces to support retrieving of service provider data and the functionality that allows service providers to update their service provider data on the NPAC SMS except serviceProvId and serviceProvType. Service providers can only retrieve their service provider data.
serviceProvLRN	Object used to represent an LRN associated with a service provider on the NPAC SMS, SOA, or Local SMS. These objects are used to support downloading of network LRN data to the Local SMS and/or SOA and the functionality that allows service providers to create/delete their own network LRN data. The service provider will have to add a new object and delete the old one to modify the data.
serviceProvNetwork	Container object used to contain network data for a service provider on the NPAC SMS, SOA or Local SMS. It is used in the NPAC SMS to Local SMS and SOA to NPAC SMS interfaces to support downloading of network data to the Local SMS and the functionality that allows service providers to update their network data on the NPAC SMS.
serviceProvNPA-NXX	Object used to represent an NPA-NXX associated with a service provider on the

Managed Object Name	Interface Functionality Mapping
	NPAC SMS, SOA or Local SMS. These objects are used to support downloading of network NPA-NXX data to the Local SMS and/or SOA and the functionality that allows service providers to create/delete their own network NPA-NXX data. NPA splits are supported only through direct contact with NPAC personnel.
serviceProvNPA-NXX-X	<p>Object used to represent an NPA-NXX-X associated with a service provider on the NPAC SMS, SOA or Local SMS. These objects are used in number pooling to support downloading of network NPA-NXX-X data to the Local SMS or SOA. Only the NPAC SMS is allowed to create, delete and modify a service provider's NPA-NXX-X data.</p> <p>Local SMS may support this object by setting the "NPAC Customer LSMS NPA-NXX-X Indicator" to TRUE in their service provider profile on the NPAC SMS.</p> <p>SOA may support this object by setting the "NPAC Customer SOA NPA-NXX-X Indicator" to TRUE in their service provider profile on the NPAC SMS.</p>
subscriptionAudit	Object used to represent a subscription audit request on the NPAC SMS. These objects are used to support subscription audit requests from the SOA to the NPAC SMS using the SOA to NPAC SMS interface. The object supports notifications for audit discrepancies found and audit completion results. If the subscription version LNP type is equal to 'pool', the appropriate number pool block will also be audited.
subscriptionVersion	Object used to represent a subscription version on the Local SMS. These objects are used to support subscription version download from the NPAC SMS to the Local SMS using the NPAC SMS to Local SMS interface
subscriptionVersionNPAC	Object used to represent a subscription version on the NPAC SMS. These objects are used to support subscription administration from the SOA using the SOA to NPAC SMS interface. Capability is provided for version creation, activation, modification, cancellation, disconnect, and query.

## 4.1.3 Action Interface Functionality

The table below contains the mapping of the SOA to NPAC SMS and the Local SMS to NPAC SMS actions to the interface functionality.

*Exhibit 10. The Action Interface Functionality Table*

Action Name	Interface Requirements Mapping
InpDownload	This action is used to support the downloading of subscription, number pool block and network data to the Local SMS from the NPAC SMS. It also supports the downloading of network data to the SOA from the NPAC SMS.
InpRecoveryComplete	This action is used to specify the system has recovered from down time and the transactions performed since the association establishment can now be sent to the Local SMS from the NPAC SMS using the Local SMS to NPAC SMS interface or the SOA from the NPAC SMS using the SOA to NPAC SMS interface.
numberPoolBlock-Create	This action is used to support creation of the number pool block object by the block holder service provider from the SOA to the NPAC SMS using the SOA to NPAC SMS interface.
subscriptionVersionActivate	This action is used to support subscription version activation by the new service provider from the SOA to the NPAC SMS using the SOA to NPAC SMS interface.
subscriptionVersionCancel	This action is used to support subscription version cancellation by a service provider from the SOA to the NPAC SMS using the SOA to NPAC SMS interface.
subscriptionVersionDisconnect	This action is used to support subscription version disconnection by the current service provider from the SOA to the NPAC SMS using the SOA to NPAC SMS interface.
subscriptionVersionLocalSMS-Create	This action can be used by the NPAC SMS to create multiple subscription versions via the Local SMS to NPAC SMS interface.
subscriptionVersionModify	This action is used to support subscription version modification by a service provider from the SOA to the NPAC SMS using the SOA to NPAC SMS interface.
subscriptionVersionNewSP-CancellationAcknowledge	This action is used to support the acknowledgment of subscription versions with a status of cancel-pending by the old service provider from the SOA to the NPAC SMS using the SOA to NPAC SMS interface.
subscriptionVersionNewSP-Create	This action is used to support subscription version creation by the new service provider from the SOA to the NPAC SMS using the SOA to NPAC SMS interface.
subscriptionVersionOldSP-CancellationAcknowledge	This action is used to support the acknowledgment of subscription versions with a status of cancel-pending by the old service provider from the SOA to the NPAC SMS using the SOA to NPAC SMS interface.
subscriptionVersionOldSP-Create	This action is used to support subscription version creation by the old service provider from the SOA to the NPAC SMS using the SOA to NPAC SMS interface.
subscriptionVersion RemoveFromConflict	This action is used on the NPAC SMS via the SOA to NPAC SMS interface to set the subscription version status from conflict to pending.

Action Name	Interface Requirements Mapping
InpNotificationRecovery	This action is used on the NPAC SMS via the SOA to NPAC SMS or Local SMS to NPAC SMS interface to recover notifications.

#### 4.1.4 Notification Interface Functionality

The table below contains the mapping of the SOA to NPAC SMS and the Local SMS to NPAC SMS notifications to the interface functionality.

*Exhibit 11. The Notification Interface Functionality Table*

Notification Name	Interface Requirements Mapping
InpNPAC-SMS-Operational-Information	This notification is used to support the reporting of NPAC SMS scheduled down time. This notification can be issued from the InpNPAC-SMS object on the NPAC SMS to a SOA via the SOA to NPAC SMS interface or from the NPAC SMS to the Local SMS via the NPAC SMS to Local SMS interface.
numberPoolBlockStatusAttributeValueChange	This notification is issued when the number pool block status is modified and can contain the number pool block status and failed service provider list. This notification is issued over the NPAC SMS to SOA interface from the numberPoolBlockNPAC object.
subscriptionAudit-DiscrepancyRpt	This notification is used to support the reporting of audit discrepancies found during audit processing. This notification can be issued from an audit object on the NPAC SMS to a SOA via the SOA to NPAC SMS interface.
subscriptionAudit-Results	This notification is used to support the reporting of audit processing results. This notification can be issued from an audit object on the NPAC SMS to a SOA via the SOA to NPAC SMS interface.
subscriptionVersionCancellationAcknowledgeRequest	This notification is issued to new and old service providers to request that a cancellation acknowledgment be sent for a subscription version in a cancel-pending state. This notification is issued via the SOA to NPAC SMS interface from the NPAC subscription version object if the service provider fails to acknowledge the cancellation after a tunable amount of time specified in the NPAC SMS.
subscriptionVersionDonorSP-CustomerDisconnectDate	This notification informs the donor service provider SOA that a subscription version is being disconnected. This notification is issued from a subscription version object on the NPAC SMS to a SOA via the SOA to NPAC SMS interface.
subscriptionVersionLocalSMS-ActionResults	This notification contains the results of a subscriptionVersionLocalSMS-Create action once all the create requests have been attempted. It is issued from the Local SMS to the NPAC SMS via the NPAC SMS to Local

Notification Name	Interface Requirements Mapping
	SMS interface.
subscriptionVersionNew-NPA-NXX	This notification informs the Local SMS or SOA of a pending subscription version or new number pool block involving the first use of an NPA-NXX.
subscriptionVersionNewSP-CreateRequest	This notification is issued to the new service provider to request that a create request be sent for the subscription version created by the old service provider to provide authorization and/or porting information. This notification is issued via the SOA to NPAC SMS interface from the NPAC subscription version object if the new service provider failed to authorize porting of a number after a tunable amount of time specified in the NPAC SMS.
subscriptionVersionOldSP-ConcurrenceRequest	This notification is issued to the old service provider to request that a create request be sent for the subscription version created by the new service provider to provide concurrence for porting. This notification is issued via the SOA to NPAC SMS interface from the NPAC subscription version object if the old service provider failed to authorize porting of a number after a tunable amount of time specified in the NPAC SMS.
subscriptionVersionStatusAttributeValueChange	This notification is issued when the subscription version status is modified. This notification is issued from the NPAC SMS to the SOA via the SOA to NPAC SMS interface from the subscriptionVersionNPAC object.
SubscriptionVersionOldSPFinalConcurrenceWindow Expiration	This notification is issued to the old service provider to request for a final time that a create request be sent for the subscription version created by the new service provider to provide concurrence for porting. This notification is issued via the SOA to NPAC SMS interface from the NPAC subscription version object if the old service provider failed to authorize porting of a number after a tunable amount of time.

## 4.2 Scoping and Filtering Support

The following section defines the scoping and filtering support for both the SOA to NPAC SMS interface and LSMS to NPAC SMS interface.

### 4.2.1 Scoping

The NPAC SMS to Local SMS or SOA to NPAC SMS interfaces do not support scoping of CMIP operations of any type by the LSMS or SOA for the following objects:

- root
- InpLocal-SMS
- InpNetwork
- any object with an “empty” filter

NPAC SMS is not required to support Scope other than baseObject Scope for CMIP operations that specify baseManagedObjectClass of one of the following:

- InpNPAC-SMS
- InpServiceProvs

Scoped operations for subscriptionVersions or numberPoolBlocks to the LSMS must be supported on the baseObject (level 0) or from the InpSubscriptions object with a non-empty filter.

The limit in scoping and functionality prevents the NPAC, SOA, and the LSMS systems from having to implement functionality or respond to large requests that are not necessary to support LNP over the mechanized interfaces.

### 4.2.2 Filtering

Filtering on the NPAC SMS is supported as defined in the GDMO. The NPAC SMS requires the Local SMS to support at a minimum the filter criteria specified below.

**Limitations:**

- OR and NOT filter support is not required for the Local SMS or SOA.
- NOT filter support is not required for the NPAC SMS.
- Filtering requests with a scope will not be issued to the Local SMS or SOA by the NPAC SMS for any object other than the subscriptionVersion and numberPoolBlock objects. No query will be used that requests both subscription versions and number pool blocks at the same time..
- All authorization rules apply to scoped and filtered operations. For example, a query for data that a service provider is not authorized to view will be failed with a reason of access denied.
- CMISync is not supported for any scoped/filtered CMIP operation.

The following table shows the CMISE primitive filtering support required of the Local SMS by the NPAC SMS for the subscriptionVersion object.

**Exhibit 12 - CMISE Primitive Filtering Support for the Subscription Version Object**

CMISE Primitives	Filter Supported	Notes
M-ACTION	N	No filtering is applied to the actions for the subscriptionVersion object.
M-GET	Y	TN Range with greaterOrEqual, lessOrEqual, equality must be supported for auditing.
M-SET	Y	TN Range with greaterOrEqual, lessOrEqual, equality must be supported for Mass Update or TN range modify requests.
M-DELETE	Y	TN Range with greaterOrEqual, lessOrEqual, equality will be supported for range disconnect or port to original requests.

**Exhibit 13 CMISE Primitive Filtering Support for the Number Pool Block Object**

CMISE Primitives	Filter Supported	Notes
M-ACTION	N	No filtering is applied to the actions for the number pool block object.
M-GET	Y	NPA-NXX-X Range with greaterOrEqual, lessOrEqual, equality must be supported for auditing.
M-SET	Y	NPA-NXX-X Range with greaterOrEqual, lessOrEqual, equality must be supported for Mass Update modify requests.
M-DELETE	N	Single request deletes are sent to the number pool block.

#### 4.2.3 Action Scoping and Filtering Support

For messages sent to any object, the scope and filter will be checked to ensure it is appropriate for that object class.

- All M-ACTIONS that relate to subscriptions and number pool blocks are targeted to InpSubscriptions.
- The ONLY filters allowed by the GDMO for InpSubscriptions are "equality" and "present" for the single attribute InpSubscriptionsName.
- If any one of the above M-ACTIONS is sent to a subscriptionVerisonNPAC or numberPoolBlockNPAC object you will get a "no such action" error response from that object.
- If you send a scoped/filtered M-ACTION whose scope includes objects of class subscriptionVersionNPAC or numberPoolBlockNPAC, you will receive an error "no such action" from each object specified by the filter.

#### 4.3 InpLocal-SMS-Name and InpNPAC-SMS-Name Values

The following table (Exhibit 14) shows the values to be used for all currently identified NPAC regions for InpNPAC-SMS-Name in the InpNPAC-SMS object. The InpLocal-SMS-Name for the InpLocal-SMS object will be the service provider ID followed by a dash and the InpNPA-SMS Name (e.g., 9999-Midwest Regional NPAC SMS).

**Exhibit 14 - Defined InpLocal-SMS-Name and InpNPAC-SMS-Name Values**

NPAC Customer Ids	NPAC SMS Region	InpNPAC-SMS-Name
0000	Midwest	Midwest Regional NPAC SMS

NPAC Customer Ids	NPAC SMS Region	InpNPAC-SMS-Name
0001	Mid-Atlantic	Mid-Atlantic Regional NPAC SMS
0002	Northeast	Northeast Regional NPAC SMS
0003	Southeast	Southeast Regional NPAC SMS
0004	Southwest	Southwest Regional NPAC SMS
0005	Western	West Regional NPAC SMS
0006	West Coast	West Coast Regional NPAC SMS
0007	Canada	Region8 NPAC Canada

#### 4.4 OID Usage Information

##### 4.4.1 OIDs Used for Bind Requests

Value	OID
CMIPUserInfo	2:1:1 (per standards and pp.49 IIS1.5)
CMIPAbortInfo	2:1:1 (per standards and pp.51 IIS1.5)
LnpAccessControl	{Inp-attribute 1} = 1:3:6:1:4:1:103:7:0:0:2:1
UserInfo (NpacAssociationInfo)	1:3:6:1:4:1:103:7:0:0:2:105
Application context	2:9:0:0:2 (per standards)

##### 4.4.2 Other OIDs of Interest

Value	OID
AccessControl OID as part of a SMI notification	1:3:6:1:4:1:103:7:0:0:8:1
AccessControl as part of LNP notifications	{Inp-attribute 1} = 1:3:6:1:4:1:103:7:0:0:2:1

#### 4.5 Naming Attributes

Non-zero values are not supported in the auto-instance naming attributes for Local Number Portability objects defined in the IIS.

#### 4.6 Subscription Version M\_DELETE Messages

M\_DELETE commands are not sent for subscription versions set to old as a result of subsequent porting activity. M\_DELETEs for subscription versions are only sent as a result of disconnect or port to original processing. Local SMS systems are responsible for deletion of the subscription versions in their Local SMS database due to the fact that some LSMS implementations may choose to retain old subscription versions in their database.

#### **4.7 Number Pool Block M\_DELETE Messages**

M\_DELETE commands are not sent for number pool blocks set to old as a result of subsequent porting activity. M\_DELETEs for number pool blocks are only sent as a result of de-pool. Local SMS systems are responsible for deletion of the number pool blocks in their Local SMS database due to the fact that some LSMS implementations may choose to retain old number pool blocks in their database.

## 5 *Secure Association Establishment*

### 5.1 Overview

This section describes the security, the association management and recovery procedures for the service provider SOAs and Local SMSs to follow, and how error information will be passed between interfaces.

The first section describes the security and authentication procedures used in the NPAC SMS interface. The second section describes the NPAC SMS's behavior and error handling and suggests how a service provider SOA or Local SMS should proceed when establishing an association.

### 5.2 Security

This section describes the security processes and procedures necessary for service provider SOA systems and Local SMSs to establish a secure association and maintain secure communication with the NPAC SMS. Security threats to the NPAC SMS include:

- Spoofing - An intruder may masquerade as either the SOA, Local SMS, or NPAC SMS to falsely report information.
- Message Tampering - An intruder may modify, delete, or create messages passed.
- Denial or Disruption of Service - An intruder may cause denial or disruption of service by generating or modifying messages.
- Diversion of Resources - An intruder may generate or modify messages that cause resources to be diverted to unnecessary tasks.
- Slamming - An intruder may generate or modify messages that cause customer's service to be moved between service providers.

Security threats are prevented in the NPAC SMS by use of the following methods:

- Strong two way authentication at association.
- Insuring data integrity by detection of replay, deletion, or modification to a message.
- Insuring non-repudiation of data by guaranteeing integrity and supporting data origination authentication for each incoming message.
- Implementation of access control and application level security that allows only authorized parties to cause changes to the NPAC SMS database.

#### 5.2.1 Authentication and Access Control Information

The following access control information definition will be used in the AccessControl field of the association and CMIP PDUs to ensure a secure communication for both the SOA to NPAC SMS interface and the NPAC SMS to Local SMS interface:

```

LnpAccessControl ::= SEQUENCE {
    systemId          [0] SystemID,
    systemType       [1] SystemType,
    userId           [2] GraphicString60 OPTIONAL,
    listId           [3] INTEGER,
    keyId            [4] INTEGER,
    cmipDepartureTime [5] GeneralizedTime,
    sequenceNumber   [6] INTEGER (0...4294967295),
    function         [7] AssociationFunction,
    recoveryMode     [8] BOOLEAN signature
    signature        [9] BIT STRING
}

ServiceProvId ::= GraphicString4

SystemID ::= CHOICE {
    serviceProvID [0] ServiceProvId,
    npac-sms [1] GraphicString60
}

SystemType ::= ENUMERATED {
    soa(0),
    local-sms(1),
    soa-and-local-sms(2), -- value not supported

    npac-sms(3)          --value is only valid for AccessControl
                        definition
}

AssociationFunction ::= SEQUENCE {
    soaUnits [0] SoaUnits,
    lsmsUnits [1] LSMSUnits
}

SoaUnits ::= SEQUENCE {
    soaMgmt [0] NULL OPTIONAL,
    networkDataMgmt [1] NULL OPTIONAL,
    dataDownload [2] NULL OPTIONAL
}

LSMSUnits ::= SEQUENCE {
    dataDownload [0] NULL OPTIONAL LSMSUnits ::= SEQUENCE {
        dataDownload [0] NULL OPTIONAL,
        networkDataMgmt [1] NULL OPTIONAL,
        query [2] NULL OPTIONAL
    }
}

```

Exhibit 15. Access Control

### 5.2.1.1 System Id

The system Id is the unique Id for the system using an interoperable interface and must be specified in the systemId field. For a service provider using the SOA and/or Local SMS interfaces, this is the Service Provider ID. For the NPAC SMS, it is the unique identifier for the regional SMS.

In cases where a service provider is providing SOA services for an associated service provider, the primary service provider must establish the association with their System Id set to their primary Service Provider ID. PDUs that are subsequently sent to the NPAC SMS may contain the primary or associated Service Provider Ids of the requesting service provider. Associated Service Provider Ids are sent in the System Id when actions are being taken on behalf of an associated service provider by the service provider providing SOA services (the primary service provider). The Service Provider ID specified in the access control for PDUs sent after association establishment, whether it's the primary or secondary Service Provider ID, is considered the requesting service provider and all validations will use this Service Provider ID.

### 5.2.1.2 System Type

The system type that indicates the type of system using the interoperable interface must be specified in the systemType field. The valid types are SOA and/or Local SMS and NPAC SMS.

### 5.2.1.3 User Id

The user Id of the user of the interface can optionally be specified in the userId field for the SOA interface. This is the 60 character graphics string user identifier for a user on a SOA system. It is not validated on the NPAC SMS, however, it is used for logging purposes.

### 5.2.1.4 List Id

The list Id must be specified as an integer in the listId field to identify a key list. This key list is one of the key lists exchanged outside of the interface process that is known to both the NPAC SMS and the Local SMS or SOA system it is communicating with.

NPAC key lists and service provider key lists are to be managed based upon service provider id and presentations layer address (P-selector) of the service provider's SOA system and/or Local SMS system. Also, a given service provider id and P-selector value can exist for one or more Network Service Access Points (NSAP).

The NPAC SMS must generate and maintain NPAC key lists based upon the service provider's service provider id and P-selector value of the system(s) that support its SOA and LSMS interfaces. In addition, service providers(SOA systems and Local SMS systems) must also manage the NPAC's key lists. Each side of the interface must support multiple NPAC key lists per service provider id and P-selector value.

Service providers (SOA system and Local SMS system) must generate and maintain key lists based upon the service provider's service provider id and P-selector value of the system(s) that support its SOA and LSMS interfaces. Furthermore, the NPAC SMS must also manage the service provider's key lists. Each side of the interface must support multiple service provider(SOA system and Local SMS) key lists per service provider id and P-selector value.

---

In cases where a service provider is providing SOA services for an associated service provider, key lists are only exchanged with the primary service provider using the primary service provider id.

#### 5.2.1.5 Key Id

The key Id of a key in the key list must be specified as an integer in the keyId field. This uniquely identifies the key in the key list used to create the digital signature. The size of the modulus for the key is variable between 600 and 2048 bits.

Since key lists are to be managed based upon service provider id and the P-selector value of a service provider's SOA system and/or Local SMS system, keys are to be treated independently at the presentation layer for an association. By using presentation layer support of a key list, SOA and Local SMS systems can have one key or unique keys to support the SOA and LSMS interfaces. The following situations are supported:

1. If a service provider has one process supporting the SOA and LSMS interface, then the process has one P-selector value supporting both interfaces. The SOA/Local SMS system would use the same key list and the same key for all associations created for the both the SOA and LSMS interface. The NPAC SMS would in turn have one NPAC key list and key to support both interfaces.
2. If a service provider has two processes supporting the SOA and LSMS interface, then each process would have different P-selector values. The SOA and Local SMS systems would use separate key lists and keys per interface. In detail, the SOA system would use a key list and key for all associations involving the SOA interface and the Local SMS system would use a different key list and key for all associations involving the LSMS interface. The NPAC SMS would also manage separate key lists and keys per the SOA and LSMS interface. Furthermore, the NPAC SMS would use the same key list and key for all associations within a given interface.
3. If a service provider has an SOA system or a Local SMS system that consists of multiple processes, then each processes would have different P-selector values. Therefore, each process would manage separate key lists and separate keys per process. The NPAC SMS would also manage separate key lists/keys per process. For example, if a Local SMS system consists of 2 processes (one process supporting subscription data and the other supporting network/query data), the processes would have separate P-selector values and use separate key lists/keys per association. The NPAC SMS would also manage separate key lists and keys per process within the LSMS interface.

Note: In cases where a service provider is providing SOA services for an associated service provider, keys are used from primary service provider key lists

If the service provider determines their key is compromised they should change their own private key and list. If the NPAC determines that their key is compromised then they should change their own private key and list. The NPAC should not invalidate a service provider's key and vice versa. However, should either side of the industry interfaces (SOA and Local SMS interface) change keys, the remote side is expected to mark the previously used key as used (key expiration). Previously used keys (ListId/KeyId combinations) are considered expired and result in a security violation across the industry interface when re-used.

## 5.2.1.6 CMIP Departure Time

The CMIP departure time must be specified in GeneralizedTime in the cmipDepartureTime field as the time the PDU departed the sending system. The universal time format (YYYYMMDDHHMMSS.0Z) is used. In order to ensure data integrity and no-repudiation the NPAC SMS system must be synchronized to within five minutes of the Local SMS and SOA systems that it communicates.

## 5.2.1.7 Sequence Number

The sequence number is a 32 bit integer that must be specified in the sequenceNumber field. It should be specified as zero at association time and incremented by one for every message sent over the association. Once the sequence number reaches 4294967295 the counter will be reset to one for the association. Please note that each sender independently keeps its own counter for the sequence number of messages sent and received. For example, after association is established, a Local SMS could send three messages to the NPAC SMS with sequence numbers 1, 2, and 3 respectively. The NPAC SMS when sending its first message to the Local SMS would use sequence number 1 not sequence number 4.

## 5.2.1.8 Association Functions

The Association Function(s) must be specified on the initial association request (AARQ PDU). The following table lists the possible Association Functions that can be specified for each of the Association Request Initiators and the associated bit mask value:

Exhibit 16 Association Functions

Association Request Initiator	SOA	Local SMS
<b>Association Function</b>		
<b>SOA Management (Audit and Subscription Version)</b> <b>Classes:</b> InpSubscriptions numberPoolBlock numberPoolBlockNPAC subscriptionAudit subscriptionVersion subscriptionVersionNPAC	0x01	
<b>Service Provider and Network Data Management</b> <b>Classes:</b> InpNetwork InpNPAC-SMS InpServiceProvs IsmsFilterNPA-NXX serviceProv serviceProvLRN serviceProvNetwork serviceProv-NPA-NXX serviceProvNPA-NXX-X	0x02	0x04
<b>LSMS Network and Subscription Data Download</b>		0x08

	Association Request Initiator	SOA	Local SMS
<b>Association Function</b>			
<b>Classes:</b> <b>InpNetwork</b> <b>InpSubscriptions</b>			
<b>SOA Network Data Download</b> <b>Classes:</b> <b>InpNetwork</b>		0x20	
<b>Query Outbound from the NPAC SMS</b> <b>Classes:</b> <b>All</b>			0x10

The association functions specified upon association are stored. Then all subsequent operations performed by that associations are then validated against that data to verify that they are 'legal'. All outbound messages from the NPAC are also validated against the association functions and if a service provider does not have the correct masking set, they will not receive the transmission. Note that the multiple Association Functions can be specified for an association. For example, a Local SMS can establish an association for both the process audit and network and subscription data download association functions.

#### 5.2.1.9 Recovery Mode

The recovery mode flag is set to TRUE when a Local SMS or SOA is establishing a connection after a downtime. This flag indicates to the NPAC SMS to hold all current transactions until the Local SMS or SOA sends the Recovery Complete action. Once an association is established in recovery mode by a Local SMS, the Local SMS should request subscription and network downloads and notifications that occurred during downtime. Once an association is established in recovery mode by a SOA, the SOA should request network downloads and notifications that occurred during downtime. After these steps are complete, the Local SMS or SOA should submit the Recovery Complete action. The NPAC SMS will respond to the recovery complete action, send all updates that occurred since association establishment and then normal processing will resume. See *Appendix B, Section 7.1*.

Service Provider Local SMS and SOA systems recover data independently. SOA systems can recover their information before, after, or concurrently with an LSMS using the same Service Provider Id.

A service provider providing SOA services for associated service providers can recover notifications for the primary and each associated service provider id prior to issuing the Recovery Complete action.

#### 5.2.1.10 Signature

The signature field contains the MD5 hashed and encrypted systemId, the system type, the userId, the cmipDepartureTime, and sequenceNumber without separators between those fields or other additional characters. Before hashing and encryptions, character fields are ASCII format and integer fields are 32 bit big endian. Encryption is done using RSA encryption using the key from the key list specified. Validation of this field ensures data integrity and non-repudiation of data. The following is additional information about how the information should be represented for digital signature encoding:

Field	Format	Contents
systemID	ASCII	
systemType	Integer	e.g. local-sms = 1
userId	ASCII	
cmipDepartureTime	ASCII	"YYYYMMDDHHMMSS.OZ" format
sequenceNumber	Integer	

## 5.2.2 Association Establishment

Strong two way authentication at association is done for both the SOA to NPAC SMS interface and the NPAC SMS to Local SMS interface. This secure association establishment is done at the application level using the access control field described above. The access control information used during association set-up is sent in the association control messages. Association establishment can be done by the SOA to NPAC SMS or Local SMS to NPAC SMS. The NPAC SMS cannot initiate an association. The initiator of the association specifies its information in the AARQ PDU message and the responder in the AARE PDU.

When the SOA or LSMS initiate an association with the NPAC the NSAP and P-selector values will be validated to ensure that they are valid for the service provider initiating the association. The following is an example of the information exchanged in the AARQ and AARE PDUs and the processing involved. Assume for the example:

- A Local SMS is making an association with the NPAC SMS.
- The Local SMS systemId is "9999."
- The NPAC SMS systemId is "NPAC SMS User Id."
- The listId for the key list is 1.
- The keyId is 32.
- The key in listId 1 with a keyId of 32 is "ABC123."
- The sequence number is 0 (as required).

The Local SMS initiates the association request by creating and sending an AARQ PDU to the NPAC SMS. This AARQ PDU contains the following access control information in the syntax described above:

- The systemId of "9999".
- The listId of 1.
- The keyId of 32.
- The current Local SMS GMT time in the cmipDepartureTime.
- A sequence number of 0.
- The signature contains MD5 hashed and encrypted systemId, systemType, userId, cmipDepartureTime, and the sequenceNumber using the encryption key "ABC123" as found in key list 1 with key id 32.

- And all BOOLEAN items are set to FALSE in the functional groups field, except for the LSMSUnit of Query item which is set to TRUE.

Once the AARQ PDU is sent, the sender (in this case the Local SMS), starts a tunable timer (with a default value of 2 minutes). If the timer expires before the AARE PDU is received then the Local SMS will terminate the association attempt.

When the NPAC SMS receives the association request it validates the data received. The data is validated as follows:

- Ensure the systemId is present and valid for the association.
- Ensure the sequence number is 0.
- Ensure the cmipDepartureTime is within 5 minutes of the current NPAC SMS GMT time.
- Find the key specified and decrypt the signature insuring that the systemId, systemType, userId, cmipDepartureTime, and sequenceNumber are the same as those specified in the PDU.
- The functional groups requested are valid for the system type that requested the association. In this example, the system type must be "local-sms(1)" {"soa-andlocal-sms(2)" value is to be removed from a future version of the IIS}.

If validation of the AARQ PDU fails then an A-ABORT will be issued by the NPAC SMS with an error of access denied. If the validation of the AARQ PDU is successful then an AARE PDU would be sent back to the Local SMS. This AARE PDU contains the following access control information in the syntax described above:

- The systemId of "NPAC SMS User Id."
- The listId of 1.
- The keyId of 32.
- The current NPAC SMS GMT time in the cmipDepartureTime.
- A sequence number of 0.
- And the signature contains MD5 hashed and encrypted systemId, systemType, userId, cmipDepartureTime, and the sequenceNumber using the encryption key "ABC123" as found in key list 1 with key id 32.

The NPAC SMS may choose to optionally specify a new listId and keyId if for any reason it wants to make a key change. Should either side of the interface change its listId/keyId values, both sides of the interface must mark the previously used keyId as used.

When the Local SMS receives the association response it validates the data received. The data is validated as follows:

- Ensure the systemId is present and valid for the association. (Note: the userId field is not required for Local SMS and NPAC SMS associations).
- Ensure the sequence number is 0.
- Ensure the cmipDepartureTime is within 5 minutes of the current Local SMS GMT time.

- Find the key specified and decrypt the signature insuring that the systemId, systemType, userId, cmipDepartureTime, and sequenceNumber are the same as those specified in the PDU.

If validation of the AARE PDU fails then an A-ABORT will be issued by the Local SMS. If validation is successful then a secure association has been established.

### 5.2.3 Data Origination Authentication

For M-GET, M-SET, M-CREATE, M-DELETE, and M-ACTION, the access control field described above is used for data origination authentication. Please note that any of the messages sent between manager and agent must be sent in confirmed mode. The following is an example of the information exchanged in the CMIP PDUs and the processing involved. Assume for the example:

- A SOA is making an association with the NPAC SMS.
- The SOA system provides SOA functionality for another Service Provider.
- The SOA systemId is “9999” for the primary Service Provider Id and is “8888” for an associated Service Provider Id.
- The NPAC SMS systemId is “NPAC SMS User Id.”
- The listId for the key list is 1.
- The keyId is 32.
- The key in listId 1 with a keyId of 32 is “ABC123.”
- The sequence number is 1.

The SOA sends an M-GET to the NPAC SMS. The M-GET PDU contains the following access control information in the syntax described above:

- The systemId of “8888.”
- The listId of 1.
- The keyId of 32.
- The current Local SMS GMT time in the cmipDepartureTime.
- A sequence number of 1.
- And the signature contains MD5 hashed and encrypted systemId, systemType, userId, cmipDepartureTime, and the sequenceNumber using the encryption key “ABC123” as found in key list 1 with key Id 32.

Once the M-GET is sent, the sender (in this case the SOA), starts a tunable timer (with a default value of 2 minutes). If the timer expires before the M-GET CMISE service response is received then the SOA will regenerate the sequenceNumber, cmipDepartureTime and signature and resend the request. The SOA should resend a default of 3 times and abort the association if no response is received. If a response is received after the timeout period, it should be discarded. If an error message is received on a retry request, it should be evaluated to see if the request was processed or the error was received for other reasons. For example, an error of “duplicateObjectInstance” for an M-CREATE request most likely indicates a successful create.

When the NPAC SMS receives the M-GET request it validates the data received. The data is validated as follows:

- Ensure the systemId is present and valid for the association. For the SOA the systemId can be the primary or associated Service Provider Id depending on the requestor.
- Ensure the sequence number is the next sequence number expected. (In this case 1).
- Ensure the cmipDepartureTime is within 5 minutes of the current NPAC SMS time.
- Find the key specified and decrypt the signature, insuring that the systemId, systemType, userId, cmipDepartureTime, and sequenceNumber are the same as those specified in the PDU.

If validation of the M-GET PDU fails then an A-ABORT will be issued by the NPAC SMS without any additional information to prevent tampering and unauthorized use of network resources by intruders. If the validation of the M-GET PDU is successful then the NPAC SMS would get the data requested and send back an M-GET Response to the SOA.

Since CMIP notifications (M-EVENT-REPORT) do not have access control fields, all notifications defined contain the access control information in the notification definition. ObjectCreation, ObjectDeletion, and AttributeValueChange should use the “information” attribute, which is an ANY DEFINED BY to contain the access control field. The values and authentication for the notification access control fields are the same as above.

When the NPAC sends a notification, the destination service provider is uniquely identified in the distinguishedName of the M-EVENT-REPORT. The InpLocalSMS-Name attribute value(2.17) is appended to the service provider's id and is used to populate the value of the first element of the EventReportArgument's managedObjectInstance distinguishedName. This allows primary service providers to distinguish notifications destined for themselves and for each secondary service provider.

#### 5.2.4 Audit Trail

Audit trails will be maintained in logs on the NPAC SMS for the following association information:

- Association set-up messages.
- Association termination messages.
- Invalid messages:
  - Invalid digital signature.
  - Sequence number out of order.
  - Generalized time out of range.
  - Invalid origination address.
- All incoming messages regardless of whether or not they cause changes to data stored in the NPAC SMS.

This information will be made available for report generation on the NPAC SMS system. It will not be made available through the NPAC SMS Interoperable Interface.

## 5.3 Association Management and Recovery

### 5.3.1 Establishing Associations

#### 5.3.1.1 NpacAssociationUserInfo

The following structure will be used to report the status of a login attempt or the current state of the NPAC SMS:

```
NpacAssociationUserInfo ::= SEQUENCE {
    error-code [0] IMPLICIT ErrorCode,
    error-text [1] IMPLICIT GraphicString(SIZE(1..80))
}
```

```
ErrorCode ::= ENUMERATED
{
    success (0),
    access-denied (1)
    retry-same-host (2)
    try-other-host (3)
}
```

#### Bind Requests and Responses

For AARQ (M-Bind requests) the NPAC SMS will be ignoring the CMIPUserInfo userInfo field. The SMASEUserInfo will be ignored by the NPAC SMS.

In order to validate a successful login, the AARE (M-Bind response) from the NPAC SMS will contain the NpacAssociationUserInfo as the “userInfo” field of the CMIPUserInfo that is contained on the AARE. The ErrorCode will be set to “success”.

The following structure will be used for CMIPUserInfo:

```
CMIPUserInfo ::= 2:9:1:1:4
--{joint-iso-ccitt(2) ms(9) cmip(1) cmip-pci(1)
abstractSyntax(4)}

CMIPUserInfo ::= SEQUENCE {
    protocolVersion [0] IMPLICIT ProtocolVersion
    DEFAULT {version1-cmip-assoc},
    functionalUnits [1] IMPLICIT FunctionalUnits DEFAULT {},
    accessControl [2] EXTERNAL OPTIONAL
    userInfo [3] EXTERNAL OPTIONAL
}
```

#### 5.3.1.2 Unbind Requests and Responses

The NPAC SMS will never be issuing the RLRQ (M-Unbind request), but will respond to them from the SOA or Local SMS.

#### 5.3.1.3 Aborts

For unsuccessful logon attempts or situations where the NPAC SMS application must abort all associations, the ABRT CMIPAbortInfo structure's "userInfo" will contain the NpacAssociationUserInfo structure. The ErrorCode will be set to one of the enumeration values.

The following structure will be used for CMIPAbortInfo:

```
CMIPAbortInfo ::= 2:9:1:1:4
--{joint-iso-ccitt(2) ms(9) cmip(1) cmip-pci(1)
abstractSyntax(4)}

CMIPAbortInfo ::= SEQUENCE {
    abortSource [0] IMPLICIT CMIPAbortSource,
    userInfo    [1] EXTERNAL OPTIONAL
}
```

#### 5.3.1.4 NPAC SMS Failover Behavior

Under normal conditions, the primary NPAC SMS will be responding by accepting association requests while the secondary NPAC SMS will be responding by denying association requests with an ABRT and error code of TRY\_OTHER\_HOST.

When the primary NPAC SMS needs to go down for a short period of time (secondary will not take over), the primary NPAC SMS will either not be responding (if down) or be denying association requests with an error code of RETRY\_SAME\_HOST (if partially up). The secondary NPAC SMS will be responding by denying association requests with an ABRT and error code of TRY\_OTHER\_HOST.

When the primary NPAC SMS goes down (scheduled or unscheduled) and the secondary NPAC SMS is re-synchronizing to become active, the primary NPAC SMS will be denying association requests with an ABRT and error code of TRY\_OTHER\_HOST. The secondary NPAC SMS will be responding by denying association requests with an ABRT and error code of RETRY\_SAME\_HOST. Once the secondary NPAC SMS is done re-synchronizing, it will then start accepting association requests.

#### 5.3.1.5 Service Provider SOA and Local SMS Procedures

The following is an algorithm that can be used by a service provider SOA or Local SMS when trying to establish an association with the NPAC SMS:

```
try to establish an association on the primary NPAC SMS if a
response was obtained
{
    if the response was an ABRT and the ABRT is from the NPAC
    Application
    {
        switch (error code)
        {
            case ACCESS_DENIED
                find out what is causing the error and fix it
                retry the association on the primary NPAC SMS
            case RETRY_SAME_HOST
                wait X seconds
                retry the association on the primary NPAC SMS
```

```

case TRY_OTHER_HOST
    wait X seconds
    execute this algorithm again substituting
    "secondary" for "primary"
}
}
else
{
    if the response was an ABRT and from the PROVIDER
    (not application)
        find out what is causing the error and fix it
        retry the association on either the primary or
        secondary NPAC SMS
    }
else
{
    # timeout - some type of network error has occurred
    # a number of different things can be done:
    #
    #   wait X seconds
    #   retry primary
    #
    #       or
    #
    #   find out what is causing the error and fix it
    #   retry the association on the primary NPAC SMS
    #
    #       or
    #
    #   wait X seconds
    #   execute this algorithm again substituting
    #   "secondary" for "primary"
}
}

```

### 5.3.2 Releasing or Aborting Associations

Any of the systems, NPAC SMS, service provider SOA or Local SMS can abort an association at any time. Only the SOA and Local SMS can perform an RLRQ request. Once a scheduled outage has arrived, the NPAC SMS will abort associations (error code of "Try Other Host" or "Retry Same Host" depending on the type of outage).

### 5.3.3 Error Handling

#### 5.3.3.1 NPAC SMS Error Handling

The NPAC SMS will issue errors to the Local SMS and SOA interfaces based upon the definitions and mappings in Appendix A. The NPAC SMS expects the SOA and Local SMS to support the same error definitions when both issuing and receiving error responses for the operations each interface supports.

The NPAC SMS will attempt to interpret an error returned from a SOA or Local SMS. The NPAC SMS will log the error. If the request is not resent and the

error response was returned from a Local SMS and related to a subscription version broadcast (M-CREATE or Create Action, M-DELETE, M-SET), a broadcast failure will be noted for the service provider on the subscription version. If a service provider does not have an active Local SMS association at the time of a broadcast, the broadcast will be automatically failed for the service provider.

The Local SMS and SOA are expected to recover themselves with the NPAC SMS when their association is reestablished. Thus it is the responsibility of the Local SMS and SOA to request the necessary data to rectify the failed transmission of M-EVENT-REPORTs, network data updates and non-broadcast oriented subscription version updates.

If the NPAC SMS sends a request to a Local SMS or SOA and receives no response from the CMISE service within the tunable period, the NPAC SMS will resend the message according to the tunable retry periods for the specific message type. If a response is received after the timeout period, it will be discarded. If the NPAC SMS receives no response, the NPAC SMS will assume the association is down and abort the connection. The Local SMS and SOA systems should assume the same behavior with the NPAC SMS.

### 5.3.3.2 Processing Failure Error

In addition to the standard CMIP error reporting mechanisms, the following attribute will be passed in the SpecificErrorInfo structure on CMIP errors that return a PROCESSING FAILURE error. This structure will be used to detail errors not covered by the standard CMIP error codes.

#### **GDMO Definition**

```

lnpSpecificInfo ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.LnpSpecificInfo;
    MATCHES FOR EQUALITY;

### 5.3.4 Recovery

The SOA and Local SMS associations are viewed to be permanent connections by the NPAC SMS. Thus when the association is broken for any reason, the system connecting to the NPAC SMS must assume responsibility to recover and resynchronize themselves with the NPAC SMS. One association should be established for recovery and no other associations should be established in normal mode until recovery is complete.

During the recovery processing, other messages may be generated at the NPAC SMS that are intended for the recovering SOA or LSMS. These messages are queued on the NPAC SMS until the SOA or LSMS finishes the recovery process and sends an lnpRecoveryComplete action to the NPAC SMS. Additionally, during the recovery process, the “x by y” retry functionality (where “x” is the number of attempts, and “y” is the interval in number of minutes in between attempts) continues on the NPAC SMS, but message sending is suspended to the SOA or LSMS, and the retry attempts counter is not

decremented, as long as the SOA or LSMS is still in recovery mode. Therefore, a Subscription Version could stay in a “sending” status for a period of time longer than expected, since the retry logic will not transition the status to “partial failure” or “failed” as long as a Service Provider is in recovery mode.

While recovering subscription data, the NPAC SMS excludes Subscription Versions with a status of failed. The value in the Broadcast Timestamp field in each Subscription Version is used to determine whether or not a Subscription Version is included in the recovering LSMS’s requested criteria.

The SOA or LSMS is capable of recovering data based on the association functions. The SOA recovers network data and notification data using the network data management association function (networkDataMgmt). The LSMS recovers network data and subscription data using the data download association function (dataDownload), and recovers notification data using the network data management association function (networkDataMgmt).

#### 5.3.4.1 Local SMS Recovery

To recover, the Local SMS starts by setting the recoveryMode flag of the access control parameter. This flag signals the NPAC SMS to hold all data updates to this Local SMS. The Local SMS should then request the network and subscription data downloads and the notifications that occurred during downtime. Once this is complete, the Local SMS should issue the InpRecoveryComplete action to turn off the recoveryMode flag. After the NPAC SMS responds to the InpRecovery Complete action it will send to the LSMS any other messages that have occurred since the association was established.

#### 5.3.4.2 SOA Recovery

To recover, the SOA starts by setting the recoveryMode flag of the access control parameter. This flag signals the NPAC SMS to hold all data updates to this SOA. The SOA should then request the network data downloads and notifications that occurred during downtime. Once this is complete, the SOA should issue the InpRecoveryComplete action to turn off the recoveryMode flag. After the NPAC SMS responds to the InpRecovery Complete action it will send to the SOA any other messages that have occurred since the association was established.

### 5.4 Congestion Handling

The following sections define NPAC SMS behavior when in congestion and the NPAC handling of Local SMS and SOA congestion. The recommendation for Congestion Control follows the “Flow Control” mechanism and is described in OSI Communication Reference Model (ISO/IEC 7498).

The two types of flow control defined are:

1. Peer Flow Control
2. Inter-Layer Flow Control

Peer Flow Control can be used when two peer layers of the OSI Stack talk to each other. The most common form of Peer Flow Control is the sliding window protocol. This protocol is implemented by TCP. This is the flow control approach used by the NPAC SMS.

#### 5.4.1 NPAC SMS Congestion

Once the number of incoming messages to be queued to the NPAC SMS is exceeded at the transport layer, TCP/IP, an indication will be sent to the sender from the transport layer, TCP/IP, that congestion is occurring. Upon clearing of the congestion situation, the transport layer, TCP/IP will indicate to the sender that congestion has been cleared. As

the receiver, the NPAC SMS application will not be aware that it is congested. The NPAC SMS application will be continually processing the information being sent as quickly as possible. Only the sender will be aware that the NPAC SMS is congested due to the fact that it can not send any more information to the NPAC SMS via the transport layer, TCP/IP. Implementation of functionality to handle NPAC congestion situations is at the discretion of SOA and LSMS vendors.

#### 5.4.2 NPAC Handling of Local SMS and SOA Congestion

The NPAC SMS application must be able to handle congestion when attempting to send out a message to a SOA or LSMS system. When receiving indications of congestion via the transport layer from a SOA or LSMS the NPAC SMS application stops dispatching messages for the SPID (primary or associated) and SOA or LSMS interface that returned congestion. Note: If a SOA system returns congestion it will not affect the LSMS for the same service provider and vice versa. When the NPAC SMS stops dispatching messages to a congested SOA or LSMS, the retry attempts and retry timer values and the behavior associated with them apply to the messages not dispatched. The NPAC will abort the SOA or LSMS association once the retry attempts are exhausted. Any unacknowledged messages at the NPAC SMS application layer will be handled as failures as they are when an association is aborted today, for example for security reasons.

Once the NPAC SMS gets an indication via the transport layer that a SOA or LSMS system that was previously congested is ready to receive information, the NPAC SMS resumes sending of messages to that system. Note that the NPAC SMS will use the sequence number for the message it sends first that was the sequence number on the message that was sent when congestion indication was received. This is done since the SOA or LSMS system did not receive this message. If the sequence number were incremented this would cause the SOA or LSMS to abort the association due to the sequence number value being larger than expected. SOA and LSMSs should use the same sequence number as well when communicating with the NPAC to prevent the NPAC from aborting the association due to the sequence number value being larger than expected.

## 6 GDMO Definitions

### 6.1 Overview

The GDMO interface definitions (gdmo\_v3\_0\_2\_051200) provided below support the SOA to NPAC SMS interface and the NPAC SMS to Local SMS interface. Included in this section of the interface specification are object name bindings, attribute, package, action, and notification definitions.

### 6.2 Object Definitions

```
-- 1.0 LNP Audits Managed Object
```

```
lnpAudits MANAGED OBJECT CLASS
  DERIVED FROM "CCITT Rec. X.721 (1992) | ISO/IEC 10165-2 : 1992":top;
  CHARACTERIZED BY
    lnpAuditsPkg;
  REGISTERED AS {LNP-OIDS.lnp-objectClass 1};
```

```
lnpAuditsPkg PACKAGE
  BEHAVIOUR
    lnpAuditsDefinition,
    lnpAuditsBehavior;
  ATTRIBUTES
    lnpAuditsName GET;
  ;
```

```
lnpAuditsDefinition BEHAVIOUR
  DEFINED AS !
    The lnpAudits class is the managed object that is used as
    the container object for the subscriptionAudit objects on the
    NPAC SMS. This object has been created for scoping efficiency.
  !;
```

```
lnpAuditsBehavior BEHAVIOUR
  DEFINED AS !
    NPAC SMS Managed Object for the SOA to NPAC SMS interface.

    The service provider SOA can M-GET any lnpAudits object on the
    NPAC SMS. (SOA Management Association Function).
    The Local SMS can not M-GET any lnpAudits object on the NPAC SMS.

    The lnpAuditsName attribute is read only and can not
    be changed via the Local SMS or SOA Interface once the object has
    been created. The value of lnpAuditsName will always be "lnpAudits".

    Only one of these objects will exist per agent and it will only be
    created at startup of the CMIP agent software on the NPAC SMS.

        Local SMS and NPAC SMS Managed Object

        The Local SMS (Data Download Association Function) and the service
        provider SOA (SOA Management Association Function) can M-GET any
        lnpSubscriptions object. The lnpSubscriptionsName attribute
        is read only and can not be changed via the Local SMS Interface
        once the object has been created. The value of
        lnpSubscriptionsName will always be "lnpSubscriptions".

        Only one of these objects will exist and it will only be
        created at startup of the CMIP agent software on the NPAC SMS
        or the Local SMS.

        The lnpDownloadPkg will only be used for a lnpSubscriptions
        object instantiated on the NPAC SMS. This package is used
        for initiating downloading of subscriptionVersions and
        numberPoolBlock object creation, deletion, or modifications
        to the Local SMS (Data Download Association Function).
    !;

```

---

The `subscriptionVersionOldSP-CreatePkg` will only be used for a `lnpSubscriptions` object instantiated on the NPAC SMS. This package is used for creation of subscription versions for porting TNs by the old service provider.

The `subscriptionVersionNewSP-CreatePkg` will only be used for a `lnpSubscriptions` object instantiated on the NPAC SMS. This package is used for creation of subscription versions for porting TNs by the new service provider.

The `subscriptionVersionDisconnectPkg` will only be used for a `lnpSubscriptions` object instantiated on the NPAC SMS. This package is used for disconnection of a ported TN by the current service provider.

The `subscriptionVersionModifyPkg` will only be used for a `lnpSubscriptions` object instantiated on the NPAC SMS. This package is used for modification of a ported TN by a service provider.

The `subscriptionVersionActivatePkg` will only be used for a `lnpSubscriptions` object instantiated on the NPAC SMS. This package is used for activation of a ported TN by a new service provider.

The `subscriptionVersionCancelPkg` will only be used for a `lnpSubscriptions` object instantiated on the NPAC SMS. This package is used for cancellation of a ported TN by a service provider.

The `subscriptionVersionOldSP-CancellationPkg` will only be used for a `lnpSubscriptions` object instantiated on the NPAC SMS. This package is used for acknowledgment of subscription versions with status values of cancel-pending. This action is used by the old service provider SOA.

The `subscriptionVersionNewSP-CancellationPkg` will only be used for a `lnpSubscriptions` object instantiated on the NPAC SMS. This package is used for acknowledgment of subscription versions with status values of cancel-pending. This action is used by the new service provider SOA.

The `subscriptionVersionRemoveFromConflictPkg` will only be used for a `lnpSubscriptions` object instantiated on the NPAC SMS. This package is used for setting the status of subscription versions with status values of conflict to pending. This action is used by either the new or old service provider SOA.

The `numberPoolBlock-CreatePkg` will only be used for a `lnpSubscriptions` object instantiated on the NPAC SMS. This package is used for creation of number pool blocks.

The serviceProvLRN class is the managed object used to identify Service Provider LRN values open for porting.

!;

serviceProvLRN-Behavior BEHAVIOUR

DEFINED AS !

Local SMS and NPAC SMS Managed Object used for the Local SMS to NPAC SMS and SOA to NPAC SMS interfaces.

All attributes are read only. Once created, the serviceProvLRN object can only be deleted via the Local SMS or SOA interface.

The serviceProvLRN-ID is specified by the NPAC SMS. The serviceProvLRN-CreationTimeStamp will reflect the current system date and time when the object is created.

NPAC SMS can M-GET, M-DELETE and M-CREATE any serviceProvLRN object on the Local SMS or SOA (Network Data Functional Unit). The Local SMS or SOA only creates local copies of serviceProvLRN objects after receiving the objects from an NPAC SMS create request, reading them from the NPAC SMS for initial instantiation, or from a download request.

A Local SMS or SOA can M-GET any serviceProvLRN object (Network Data Functional Unit).

The Local SMS or SOA can M-DELETE and M-CREATE any serviceProvLRN object on the NPAC SMS for the service provider id specified in the access control (Network Data Functional Unit). Attempts to take actions on unauthorized service provider objects will be rejected.

The creation or deletion of a serviceProvLRN object will be distributed to all Local SMSs and SOAs.

The serviceProvLRN-Value attributes on the NPAC SMS can not be modified by the Local SMS or SOA. The service provider will have to add a new object and delete the old one to modify the data.

## subscriptionAuditDefinition BEHAVIOUR

## DEFINED AS !

The subscriptionAudit class is the managed object that represents a subscription audit request. This object is only instantiated on the NPAC SMS.

!;

## subscriptionAuditBehavior BEHAVIOUR

## DEFINED AS !

When the subscriptionAuditStatus changes an attribute value change will be emitted to the audit requester.

All attributes must be specified upon create with the exception of the subscriptionAuditTN-ActivationRange, if an audit is not being performed on an activation date range. If the subscriptionAuditAttributeList is not specified then a full audit is assumed. If the subscriptionAuditTN-ActivationRange is specified then an audit of all TNs in the range specified in subscriptionAuditTN-Range will be audited. The serviceAuditId is determined by the NPAC SMS.

The subscriptionAuditRequestingSP is the id of the service provider who requested the audit.

The subscriptionAuditTN-Range is the range of TNs to be audited. If only a single TN is to be audited, the ending TN station should be set to the value of the starting TN station.

---

The NPAC SMS will be required to set the number of TNs that will be audited in the subscriptionAuditNumberOfTNs attribute based on the NPAC SMS audit request criteria.

The SOA or NPAC SMS can M-CREATE, M-GET subscriptionAudit managed objects on the NPAC SMS (SOA Management Function). When a subscriptionAudit object is created on the NPAC SMS the NPAC SMS will begin the audit for the service provider specified or all service providers. The SOA can only M-GET subscriptionAudit that they created.

The SOA will be required to set the requesting SP with their service provider id so that the origination of the audit request can be tracked and notifications can be sent to the requesting SOA.

When this object is created and deleted, object creation and deletion notifications will be sent to the requester. Object deletion indicates completion of an audit. The audit results notification will be sent before the object is deleted by the entity performing the audit indicating how many discrepancies the audit found and reported during execution.

If discrepancies are found during the audit, audit discrepancy notifications will be sent to the requester at the time they are found. When audit discrepancy notifications are sent by the NPAC SMS to the requesting SOA, create, modify or delete requests will be sent to the Local SMS by the NPAC SMS to correct the discrepancies found.

For audits involving TNs that are within a pooled block or subscription versions with an LNPTYPE of 'pool', the NPAC SMS will query subscription version objects from the non-EDR Local SMS and it will query the number pool block object and subscription version objects from the EDR Local SMS. The EDR Local SMS should not return any subscription versions with an LNPTYPE of 'pool'. The NPAC SMS will report to the SOA the discrepancies with subscription version identifiers. Thus, if a numberPoolBlock object is in error, the discrepancy will be reported as all TNs within the audit range. Subscription version discrepancies will be reported as usual.

If a subscription version or a number pool block is in a state of 'sending' at the time of the audit, the NPAC SMS will not perform comparisons and corrections to the requested objects.

Deletion of an audit object cancels an audit request.

The purge of audits are based on the tunable "Audit Log Retention Period" which defaults to 90 days.

!;

subscriptionVersionDefinition BEHAVIOUR
DEFINED AS !
    The subscriptionVersion class is the managed object that
    represents a subscription version on the Local SMS.
!;

subscriptionVersionBehavior BEHAVIOUR
DEFINED AS !
    Local SMS Managed Object used for the NPAC SMS to Local SMS
    Interface.

    NPAC SMS can M-GET (Query Association Function), M-SET, M-DELETE
    and M-CREATE (Data Download Association Function) any
    subscriptionVersion object on the Local SMS (Data Download
    Association Function). The Local SMS only creates local copies
    of subscriptionVersion objects after receiving the objects from an
    NPAC SMS create request or reading them from the NPAC SMS for
    initial instantiation.

    The subscriptionVersionId is assigned upon creation by the
    NPAC SMS and is read only.

    The subscriptionTN, subscriptionLRN and associated routing
    information, are specified by the new service provider SOA upon
    creation of a new subscription version.

    The subscriptionActivationTimeStamp is set by the NPAC SMS as the
    current date and time when the subscriptionVersion activation

```

---

request is received from the new service provider.

The Local SMS will receive the subscriptionWSMSC-DataPkg attributes if the 'NPAC New Functionality Support' indicator is set for the 'LSMS WSMSC DPC SSN Data' in their service provider profile on the NPAC SMS.

When the subscription version is downloaded to the locals, the subscriptionDownloadReason is set to one of new, delete, modified, or audit-discrepancy. This field is not validated in audits.

When the subscription version disconnect is broadcast, the subscriptionVersionDonorSP-CustomerDisconnectDate is sent to the donor SOA informing the service provider of the actual customer disconnect date.

The Local SMS can not modify any of the subscription version data locally unless changes were downloaded via a download request.

The Local SMS must be able to support a scoped request (M-GET, M-SET, M-DELETE) with a filter for equality and ordering on the subscriptionTN from the NPAC SMS.

subscriptionVersionNPAC-Definition BEHAVIOUR
DEFINED AS !
    The subscriptionVersionNPAC class is the managed object
    that represents a subscription version on the NPAC SMS.
!;

subscriptionVersionNPAC-Behavior BEHAVIOUR
DEFINED AS !
    NPAC SMS Managed Object for the SOA to NPAC SMS and the Local SMS
    to NPAC SMS interface.

    A Local SMS can M-GET any subscriptionVersionNPAC objects
    from the NPAC SMS via the Local SMS Interface (Data Download
    Association Function).

    A Service Provider SOA can M-GET any subscriptionVersionNPAC
    objects from the NPAC SMS via the SOA Interface (SOA Management
    Association Function).

    If a Service Provider SOA or Local SMS does a scoped filtered
    M-GET for subscription versions, this request will only be
    successful if the number of records to be returned is less
    than or equal to the NPAC SMS tunable parameter,
    "Max Subscriber Query", in the Service Data table.

    When the status of an object is changed to "cancel-pending",
    subscriptionPreCancellationStatus is first set to the current status.

    The subscriptionCreationTimeStamp is set to the current system
    time when the object is created.

    When the subscription version is modified for any reason, the
    subscriptionModifiedTimeStamp is updated with the current system time.

    When the subscription version is broadcast to Local SMSs via
    the NPAC to Local SMS interface, the subscriptionBroadcastTimeStamp
    is updated with the current system time.

    When the subscription version has its version status set to old,

```

---

the subscriptionOldTimeStamp is updated with the current system time.

When the subscription version has its version status set to cancel, the subscriptionCancellationTimeStamp is updated with the current system time.

When the subscription version has its version status set to conflict, the subscriptionConflictTimeStamp is updated with the current system time.

When the subscription version is being disconnected and the first successful response is received from the Local SMS to the subscription version disconnect request, the subscriptionDisconnectCompleteTimeStamp is updated with the current date and time.

When the subscription version status is set to disconnect pending the subscriptionEffectiveReleaseDate is set to the date the disconnect should be broadcast.

When the subscription version in a cancel-pending state is acknowledged by an old service provider SOA, the subscriptionOldSP-CancellationTimeStamp is updated with the current system time.

When the subscription version in a cancel-pending state is acknowledged by a new service provider SOA, the subscriptionNewSP-CancellationTimeStamp is updated with the current system time.

When the subscription version in a conflict state is removed from conflict by the old service provider SOA, the subscriptionOldSP-ConflictResolutionTimeStamp is updated with the current system time.

When the subscription version in a conflict state is removed from conflict by the new service provider SOA, the subscriptionNewSP-ConflictResolutionTimeStamp is updated with the current system time.

When the subscription version broadcast is not successful to all service providers, the subscriptionFailed-SP-List is populated with a list of the failed service providers.

When the subscription version is created, the subscriptionTimerType is set according to the type of timer the old and new service providers support.

When the subscription version is created, the subscriptionBusinessType is set according to the business days and hours selection of the old and new service providers.

The Service Provider SOA can M-GET and M-SET subscriptionVersionNPAC objects via the SOA to NPAC SMS interface (SOA Management Association Function). Rules for M-SET are described below.

For M-GET requests, the filter will support all attributes for a specified ported TN.

Any service provider SOA can view any subscription version for any active ported TN (SOA Management Association Function).

Subscription versions are created on the NPAC SMS via actions over the SOA to NPAC SMS interface to the lnpSubscriptions object (SOA Management Association Function). New service provider SOAs must use the subscriptionVersionNewSP-Create action and old service provider SOAs must use the subscriptionVersionOldSP-Create action. Creates can be performed provided there is only one currently active subscription version for the TN.

subscriptionPortingToOriginal-SPSwitch can only be specified as TRUE for a TN that is currently ported and is being ported back to the original service provider. If the value of subscriptionPortingToOriginal-SPSwitch is TRUE, the LRN and GTT data should not be specified. This data is not specified because when the activate occurs for the subscription version, the Local SMS will receive requests to delete the old subscription version routing data in their networks and they will not receive any new network routing data for the subscription. Concurrence from the old service provider is required.

If the port of the subscription version is an intra-service provider port, the new service provider SOA can use the subscriptionVersionNewSP-Create action specifying the old service provider equal to the new service provider. In this case, the old service provider create action is not required and processing proceeds after a valid pending version is created in the same manner as it does for inter-service provider porting.

The new service provider SOA must provide the subscriptionWSMSC-DataPkg attributes if the 'NPAC New Functionality Support' indicator is set for the 'SOA WSMSC DPC SSN Data' in their service provider profile on the NPAC SMS.

Once a version has been created that passes validation, the subscriptionVersionNPAC object subscriptionVersionStatus will be set to pending and an object creation notification will be sent to both old and new service provider SOAs. If a version previously existed, attribute value change notifications will be sent to both old and new service provider SOAs.

If there is a pending version that does not have concurrence during the "Service Provider Concurrence Window" specified in the Service Data table, a subscriptionVersionConcurrenceRequest notification will

be

sent to the service provider SOA that has not responded. The subscriptionVersionStatus will be set to cancel if the new service provider SOA has not responded or to conflict if the old service provider SOA has not responded after the "Service Provider Final Concurrence Window". A status attribute value change will be sent to both service providers.

The Service Provider SOA can M-SET or use an M-ACTION to modify attributes associated with pending or conflict subscription versions (SOA Management Association Function).

Attempts to modify an active, sending, failed, partial failure,

---

anceled, cancel-pending, disconnect-pending or old version using an M-SET will result in an access denied error.

Modification of an active subscription can be done only by the current/new service provider SOA using the subscriptionVersionModify action.

Old service provider SOAs can only modify the following attributes:

subscriptionOldSP-DueDate  
subscriptionOldSP-Authorization  
subscriptionStatusChangeCauseCode

New service provider SOAs can only modify the following attributes:

subscriptionLRN  
subscriptionNewSP-DueDate  
subscriptionCLASS-DPC  
subscriptionCLASS-SSN  
subscriptionLIDB-DPC  
subscriptionLIDB-SSN  
subscriptionCNAM-DPC  
subscriptionCNAM-SSN  
subscriptionISVM-DPC  
subscriptionISVM-SSN  
subscriptionWSMSC-DPC  
subscriptionWSMSC-SSN  
subscriptionEndUserLocationValue  
subscriptionEndUserLocationType  
subscriptionBillingId

Upon subscription version creation, the subscriptionOldSP-DueDate and subscriptionNewSP-DueDate must match.

Validation will be done for both old and new service provider data that is specified on an M-SET. If validation fails, no changes will be made and a processing failure will be returned. If the version passes validation, the version status will be set to pending. An error message will be returned to the service provider if the status is not pending when they attempt to change the version status to cancel-pending.

Once a pending version has been created, the new service provider can activate the subscription version if the new service provider due date has been reached and the NPA-NXX effective date has been reached.

Once the version is activated, the version status is set to sending, the broadcast time stamp is updated, and creates are sent to the Local SMSs.

If the create requests are successful for all Local SMSs, the version status will be marked as active and the previously active subscription version will have its version status set to old.

If create requests fail for a subscription version after the retry periods have expired, the version status will be set to failed or partial failure based on whether the download failed in all or some of the Local SMSs respectively.

Prior to the subscription version becoming active, a status version attribute value change will be sent to both old and new service providers when the subscriptionVersionStatus is modified. If the version status is failed or partial failure then a list of failed service providers is provided in the subscriptionVersionStatus notification.

A subscription version can be put into conflict by either the NPAC SMS or by the old service provider explicitly setting the subscriptionOldSP-Authorization off.

If the old service provider explicitly sets the subscriptionOldSP-Authorization off, the subscriptionStatusChangeCauseCode must be given.

The old service provider can only put a subscription version into conflict once and only by explicitly setting the subscriptionOldSP-Authorization off.

A service provider should acknowledge the cancel pending state within a tunable time frame specified on the NPAC SMS with a cancel acknowledgement action.

If a new service provider SOA fails to acknowledge the cancel pending state, a subscriptionVersionCancellationAcknowledgeRequest is sent to the service provider SOA. If they do not respond to this acknowledgement in a tunable time frame specified on the NPAC SMS, the version status will be set to conflict. If the old service fails to acknowledge the cancel pending state, the subscription version status will be set to cancel.

Attribute value change notifications will be sent to both service provider SOAs when the following attribute values change for a pending, cancel-pending, or conflict subscription versions (AVCs are not sent for modify active subscription

versions):

subscriptionNewSP-DueDate  
subscriptionNewSP-CreationTimeStamp  
subscriptionOldSP-DueDate  
subscriptionOldSP-Authorization  
subscriptionOldSP-AuthorizationTimeStamp  
subscriptionStatusChangeCauseCode  
subscriptionVersionStatus

Object creation notifications will be sent to both old and new service provider SOAs when a subscriptionVersionNPAC associated with their Service Provider id is created. Object deletion notifications will not be used. Objects will only be deleted by the NPAC SMS as a result of housekeeping processing.

When a subscription version disconnect is broadcast, the subscriptionVersionDonorSP-CustomerDisconnectDate is sent to the donor SOA informing the service provider of the actual customer disconnect date.

The subscriptionTimerType is only returned on SOA queries to service

---

providers that support the timer information and is only sent on object creation notifications to service providers that support it.

The subscriptionBusinessType is only returned on SOA queries to service providers that support business days/hours and is only sent on object creation notifications to service providers that support business days/hours.

For number pooling, the number pool block has corresponding subscription versions with LNP type equal to 'pool'. The number pool block status represents the status of the number pool block and all subscription versions. The status of each subscription version contains the results of the broadcast of that subscription version to the non-EDR Local SMS and the result of the number pool block broadcast to the EDR Local SMSs. If a subscription version with LNP type equal to 'pool' fails a broadcast, the failed service provider list on both that subscription version and the number pool block will be set to the service provider(s) who failed. If an EDR Local SMS fails the number pool block broadcast, each subscription version with LNP type equal to 'pool' within the number pool block TN range will contain that service provider in the subscriptionFailed-SP-List.

Creation, modification or deletion of a subscription version with subscriptionLNPTType equal to 'pool' by the SOA is not allowed. All updates must be performed on the number pool block object. The NPAC SMS will update and broadcast the subscription versions with LNP type equal to 'pool' that are within the TN range specified by the number pool block object.

numberPoolBlock-Definition BEHAVIOUR
DEFINED AS !
  The numberPoolBlock class is the managed object
  used to identify number pool block information as stored on the LSMS.
!;

numberPoolBlock-Behavior BEHAVIOUR
DEFINED AS !
  Local SMS and NPAC SMS Managed Object used for the Local SMS to
  NPAC SMS interface.

  The NPAC Customer LSMS EDR Indicator in the service provider profile
  on the NPAC SMS indicates which type of object will be broadcasted to
  each LSMS. If the LSMS supports the number pool block object,
  no subscription version objects should exist on the LSMS with the
  LNP type equal to 'pool'.

  The number pool block object represents the default routing
  information for 1000 TNs. If a subscription version exists on the
  LSMS for a TN within the number pool block range, the subscription
  routing information should be used. Otherwise, if no subscription
  version exists for a TN within a number pool block range, the number
  pool block routing information should be used.

  The object can be created on the LSMS via the NPAC SMS to LSMS
  interface.

  The NPAC SMS can M-GET (Query Association Function), M-CREATE, M-
  DELETE,
  and M-SET (Data Download Association Function) any numberPoolBlock
  object on the Local SMS. The Local SMS only creates local copies of
  the numberPoolBlock objects after receiving the objects from a NPAC

```

SMS create request or reading them from the NPAC SMS for initial instantiation.

The numberPoolBlockId is assigned upon creation by the NPAC SMS and is read only.

The numberPoolBlockHolderSPID must be the same as the service provider ID of the service provider who sent in the request and the service provider ID of the serviceProvNPA-NXX-X object for the specified NPA-NXX-X.

The numberPoolBlockActivationTimeStamp is set by the NPAC SMS as the current date and time when the create request is received.

The Local SMS will receive the numberPoolBlockWSMSC-DataPkg attributes if the 'NPAC New Functionality Support' indicator is set for the 'LSMS WSMSC DPC SSN Data' in their service provider profile on the NPAC SMS.

When the number pool block is downloaded to the LSMS, the numberPoolBlockDownloadReason is set to one of new, delete, modified or audit discrepancy. This field is not validated in audits.

The Local SMS can not modify any of the number pool block data locally unless changes were downloaded via a download request.

The Local SMS must support equality and ordering on the

numberPoolBlockNPA-NXX-X attribute in a scoped and filtered request for mass updates and audits.

        accessControlParameter;  
;  
numberPoolBlockNPAC-Definition BEHAVIOUR  
    DEFINED AS !  
        The numberPoolBlock class is the managed object  
        used to identify number pool block NPAC information.  
    !;  
  
numberPoolBlockNPAC-Behavior BEHAVIOUR  
    DEFINED AS !  
        SOA SMS and NPAC SMS Managed Object used for the SOA SMS to  
        NPAC SMS interface.  
  
        The numberPoolBlock object is used to represent a block of 1000 TN  
        values. A service provider LSMS either supports the number pool block  
        representation of the TNs or individual subscription versions with  
        LNPTYPE value of 'pool'. The NPAC Customer LSMS EDR Indicator in the  
        service provider profile on the NPAC SMS indicates which type of  
        objects will be broadcasted to each LSMS.  
  
        An object creation attempt will be rejected by the NPAC SMS if  
        any subscription versions exist with a status of pending,  
        conflict, cancel-pending or failed ("pending-like") for a TN implied  
        by the NPA-NXX-X value and an active subscription version object does  
        not exist for that TN.  
  
        Once created, the numberPoolBlock object can only be deleted  
        via the NPAC SMS.  
  
        The numberPoolBlockCreationTimeStamp will be set to the  
        current date and time when the object is created by the NPAC  
        SMS.  
  
        If the SOA sends the numberPoolBlock-Create M-ACTION to create a  
        number pool block object, the numberPoolBlockSOA-Origination  
        will be set to true when the object is created by the NPAC SMS.  
        Otherwise, the value will be set to false.  
  
        The numberPoolBlockStatus is set at creation time by the NPAC SMS  
        to a value of 'sending'. Other values include: active, failed,  
        partial failure and old.  
  
        The numberPoolBlockBroadcastTimeStamp is set to the date and time  
        of the start of the last broadcast to the LSMSs for the number  
        pool block.  
  
        The numberPoolBlockDisconnectCompleteTimeStamp is set to the date and  
        time once the first successful response is received to a  
        delete broadcast to the LSMSs for the number pool block or  
        corresponding subscription versions with LNP type equal to 'pool'.  
  
        The numberPoolBlockModifiedTimeStamp is set to the date and time of  
the  
        last modification to the number pool block object.  
  
        The numberPoolBlockFailed-SP-List is set when a failure occurs  
        in sending to the LSMSs. It contains the list of EDR and non-EDR  
        service provider IDs who failed to successfully respond to the
```

broadcasted data.

Service providers can M-GET any numberPoolBlockNPAC object from the LSMS and SOA.

If the SOA supports the numberPoolBlock object, it can M-ACTION and M-SET any numberPoolBlockNPAC object on the NPAC SMS for their own service provider id (SOA Management Association Function). The NPAC SMS will reject any attempts to take actions on other service provider objects (soa-not-authorized) or attempts to M-DELETE the objects (accessDenied).

When the SOA or NPAC SMS creates the numberPoolBlockNPAC, the status is set to "sending". The NPAC SMS creates the corresponding subscription versions that represent the block with a status of "sending" and LNP type equal to 'pool'. The NPAC SMS broadcasts to the LSMSs either the numberPoolBlock object or subscriptionVersion objects according to their service provider NPAC Customer LSMS EDR Indicator on the NPAC SMS.

The object creation notification will be sent to the SOA once the number pool block object has been created on the NPAC SMS, if the SOA-origination flag is true, and contain the following attributes:

```

numberPoolBlockId
numberPoolBlockNPA-NXX-X
numberPoolBlockHolderSPID
numberPoolBlockSOA-Origination
numberPoolBlockCreationTimeStamp
numberPoolBlockStatus
numberPoolBlockLRN
numberPoolBlockCLASS-DPC
numberPoolBlockCLASS-SSN
numberPoolBlockLIDB-DPC
numberPoolBlockLIDB-SSN
numberPoolBlockCNAM-DPC
numberPoolBlockCNAM-SSN
numberPoolBlockISVM-DPC
numberPoolBlockISVM-SSN
numberPoolBlockWSMSC-DPC (OPTIONAL)
numberPoolBlockWSMSC-SSN (OPTIONAL)

```

The SOA can only M-SET a single number pool block instance. The M-SET can specify the numberPoolBlockNPA-NXX-X in a scoped and filtered request or direct the request at the specific numberPoolBlock object.

If the NPAC SMS or SOA sends a valid M-SET for the number pool block object, the NPAC SMS will also set the data on the corresponding subscription versions with LNPTYPE of 'pool' and broadcast the number pool block modifications to the EDR LSMSs and the subscription versions to the Non-EDR LSMSs. The non-EDR Local SMS will receive a scope level-1 request with the filter specifying the TN-Range and LNP type equal to 'pool'.

The attribute value change notification will be sent out to the SOA, if the SOA-origination flag is true, when any of the following

---

attributes change:

```

numberPoolBlockSOA-Origination
numberPoolBlockLRN
numberPoolBlockCLASS-DPC
numberPoolBlockCLASS-SSN
numberPoolBlockLIDB-DPC
numberPoolBlockLIDB-SSN
numberPoolBlockCNAM-DPC
numberPoolBlockCNAM-SSN
numberPoolBlockISVM-DPC
numberPoolBlockISVM-SSN
numberPoolBlockWSMSC-DPC (OPTIONAL)
numberPoolBlockWSMSC-SSN (OPTIONAL)

```

The attribute value change will not be sent when the SOA-Origination flag is set to false.

The attribute value change notification attribute list contains only the modified attribute(s).

The number pool block status attribute value change notification will be sent out to the SOA, if the SOA-origination flag is true, when the status changes and can contain the following attributes:

```

numberPoolBlockStatus
numberPoolBlockFailed-SP-List

```

If the NPAC SMS M-DELETES the number pool block object, the corresponding subscription versions with LNPTtype of 'pool' will also be disconnected. The NPAC SMS will send the M-DELETE for the number pool block object to the EDR LSMSs and send the M-DELETE(s)

for

the subscription versions to the Non-EDR LSMSs. The non-EDR Local SMS will receive a scope level-1 request with the filter specifying the TN-Range and LNP type equal to 'pool'. The NPAC SMS can only remove one numberPoolBlockNPAC object at a time.

serviceProvNPA-NXX-X-Definition BEHAVIOUR

DEFINED AS !

The serviceProvNPA-NXX-X class is the managed object used to identify Service Provider NPA-NXX-X data.

!;

serviceProvNPA-NXX-X-Behavior BEHAVIOUR

DEFINED AS !

This is the Local SMS, SOA and NPAC SMS managed object used for the Local SMS to NPAC SMS interface and SOA to NPAC SMS interface. A Local SMS supports the serviceProvNPA-NXX-X via the NPAC Customer LSMS NPA-NXX-X Indicator in their service provider profile. A SOA supports the object via the NPAC Customer SOA NPA-NXX-X Indicator in their service provider profile. Only the NPAC SMS can create, modify or delete the object. All updates are initiated by the NPAC SMS and downloaded to the Local SMSs and SOAs.

An object creation attempt will be rejected by the NPAC SMS if any subscription versions exist with a status of pending, conflict, cancel-pending or failed ("pending-like") for a TN implied by the NPA-NXX-X value and an active subscription version object does not exist for that TN or the subscription version is a port-to-original request.

NPAC SMS personnel can modify the date of the serviceProvNPA-NXX-X-EffectiveTimeStamp only prior to the number pool block activation and only if the current date is less than the effective date and the new serviceProvNPA-NXX-X-EffectiveTimeStamp is greater than or equal to the serviceProvNPA-NXX-X-CreationTimeStamp plus the NPAC SMS's NPA-NXX-X Holder Effective Date Window Tunable.

The serviceProvNPA-NXX-X-ID is specified by the NPAC SMS at creation time.

The serviceProvNPA-NXX-X-CreationTimeStamp is set to the current date and time of when the NPAC SMS creates the object.

The serviceProvNPA-NXX-X-ModifiedTimeStamp is set to the current date and time of when the NPAC SMS last modified the object.

NPAC SMS can M-DELETE, M-SET and M-CREATE a single serviceProvNPA-NXX-X object on the Local SMS or SOA (Network Data Functional Unit). The Local SMS or SOA only creates local copies of serviceProvNPA-NXX-X objects after receiving the objects from an NPAC SMS create request, reading them from the NPAC SMS download file, or from an lnpDownload request.

The following attribute can be modified by the NPAC SMS:

serviceProvNPA-NXX-X-EffectiveTimeStamp

The serviceProvNPA-NXX-X-DownloadReason and serviceProvNPA-NXX-X-ModifiedTimeStamp can be updated as a result.

The NPAC SMS will send to the Local SMS or SOA the M-SET with

---

the new serviceProvNPA-NXX-X-EffectiveTimeStamp and serviceProvNPA-NXX-X-ModifiedTimeStamp.

The SOA and Local SMS can M-GET the serviceProvNPA-NXX-X object.

The subscriptionVersionNewNPA-NXX will be sent to notify the service providers SOA and Local SMS systems of the creation of this object if the creation is the first usage of the NPA-NXX. However, this

notification is not emitted from the serviceProvNPA-NXX-X object,

but rather from the lnpNPAC-SMS object (top-level) instead.

lnpAuditsNameBehavior BEHAVIOUR
  DEFINED AS !
    This attribute provides an identifier for the lnpAudits managed
    object. The value for this attribute is "lnpAudits".
!;

-- 17.0 LNP Local SMS Name

lnpLocal-SMS-Name ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.LnpSMS-Name;
  MATCHES FOR EQUALITY;
  BEHAVIOUR lnpLocal-SMS-NameBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 17};

lnpLocal-SMS-NameBehavior BEHAVIOUR
  DEFINED AS !
    This attribute provides an identifier for the lnpLocalSMS
    object. The valid value is the service provider id of the
    Local SMS followed by a dash and then the region name of the
    NPAC-SMS specified in the lnpNPAC-SMS-Name for the NPAC SMS to
    Local SMS Interface. For example, if the region name is
    "Midwest Regional NPAC SMS" and the service provider id is "1234",
```

---

```
the lnpLocal-SMS-Name would be "1234-Midwest Regional NPAC SMS".
!;

-- 18.0 LNP Network Name

lnpNetworkName ATTRIBUTE

  MATCHES FOR EQUALITY;
  BEHAVIOUR lnpNetworkNameBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 18};

lnpNetworkNameBehavior BEHAVIOUR
  DEFINED AS !
    This attribute provides an identifier for the lnpNetwork
    object. Valid values are "lnpNetwork" for the NPAC SMS to Local
    SMS Interface.
!;

-- 19.0 LNP NPAC SMS Name

lnpNPAC-SMS-Name ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.LnpSMS-Name;
  MATCHES FOR EQUALITY;
  BEHAVIOUR lnpNPAC-SMS-NameBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 19};

lnpNPAC-SMS-NameBehavior BEHAVIOUR
  DEFINED AS !
    This attribute provides an identifier for the lnpNPAC-SMS
    object. Valid values for NPAC SMS regional systems can be obtained
    from NPAC personnel.

    The lnpNPAC-SMS-Name values are listed in the IIS document.
!;

-- 20.0 LNP Service Providers Name

lnpServiceProvsName ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.LnpServiceProvsName;
  MATCHES FOR EQUALITY;
  BEHAVIOUR lnpServiceProvsNameBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 20};

lnpServiceProvsNameBehavior BEHAVIOUR
  DEFINED AS !
    This attribute provides an identifier for the
    lnpServiceProvs object. The value for this attribute
    will be "lnpServiceProvs" in the NPAC SMS to Local SMS
    Interface.
!;

-- 21.0 LNP Specific Info

lnpSpecificInfo ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.LnpSpecificInfo;
  MATCHES FOR EQUALITY;
  BEHAVIOUR lnpSpecificInfoBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 21};
```

```
lnpSpecificInfoBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to pass specific error information in the
    case of a cmip processing failure error.
!;

-- 22.0 LNP Subscriptions Name

lnpSubscriptionsName ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.LnpSubscriptionsName;
  MATCHES FOR EQUALITY;
  BEHAVIOUR lnpSubscriptionsNameBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 22};

lnpSubscriptionsNameBehavior BEHAVIOUR
  DEFINED AS !
    This attribute provides an identifier for the
    lnpSubscriptions object. The value for this attribute
    will be "lnpSubscriptions" in the NPAC SMS to Local SMS
    Interface.
!;

-- 23.0 LNP NPAC Contact Number

npacContactNumber ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.PhoneNumber;
  MATCHES FOR EQUALITY;
  BEHAVIOUR npacContactNumberBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 23};

npacContactNumberBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to indicate the NPAC contact number
    to be called concerning an NPAC SMS outage in an NPAC operations
    notification in a log record.
!;

-- 24.0 LNP NPAC Customer Allowable Functions

npacCustomerAllowableFunctions ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.AssociationFunction;
  MATCHES FOR EQUALITY;
  BEHAVIOUR npacCustomerAllowableFunctionsBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 24};

npacCustomerAllowableFunctionsBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify what functions a service provider
    can perform on the SOA to NPAC SMS and NPAC SMS to Local SMS
    interfaces.
!;

-- 25.0 LNP Results Completion Time

resultsCompletionTime ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR resultsCompletionTimeBehavior;
```

---

```
REGISTERED AS {LNP-OIDS.lnp-attribute 25};

resultsCompletionTimeBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to store the completion time of the
    action in the action results notification.
!;

-- 26.0 LNP Service Provider Address

serviceProvAddress ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.AddressInformation;
  MATCHES FOR EQUALITY;
  BEHAVIOUR serviceProvAddressBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 26};

serviceProvAddressBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the address information
    for a service provider.
!;

-- 27.0 LNP Service Provider Billing Address

serviceProvBillingAddress ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.AddressInformation;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR serviceProvBillingAddressBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 27};

serviceProvBillingAddressBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the billing address information
    for a service provider.
!;

-- 28.0 LNP Service Provider Conflict Resolution Contact Address

serviceProvConflictAddress ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.AddressInformation;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR serviceProvConflictAddressBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 28};

serviceProvConflictAddressBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the service provider conflict
    resolution contact address and contact information.
!;

-- 29.0 LNP Service Provider Data Download Reason

serviceProvDownloadReason ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.DownloadReason;
  MATCHES FOR EQUALITY;
  BEHAVIOUR serviceProvDownloadReasonBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 29};

serviceProvDownloadReasonBehavior BEHAVIOUR
```

---

```
DEFINED AS !
    This attribute is used to specify the reason the data was
    downloaded to the Local SMS from NPAC SMS. This attribute only
    has meaning in objects instantiated on the Local SMS.
!;
```

```
-- 30.0 LNP Service Provider ID

serviceProvID ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.ServiceProvId;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR serviceProvID-Behavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 30};

serviceProvID-Behavior BEHAVIOUR
    DEFINED AS !
        This attribute provides an identifier for the
        serviceProvNetwork and serviceProv objects as
        well as an identifier for the service provider who has requested
        an audit on the NPAC SMS. Valid values are the Facilities Id
        (or OCN) of the service provider.
!;
```

```
-- 31.0 LNP Service Provider LRN Creation Time Stamp

serviceProvLRN-CreationTimeStamp ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR serviceProvLRN-CreationTimeStampBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 31};

serviceProvLRN-CreationTimeStampBehavior BEHAVIOUR
    DEFINED AS !
        This attribute provides the timestamp of when the
        serviceProvLRN object was created on the NPAC SMS.
!;
```

```
-- 32.0 LNP Service Provider LRN ID

serviceProvLRN-ID ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.LRN-ID;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR serviceProvLRN-ID-Behavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 32};

serviceProvLRN-ID-Behavior BEHAVIOUR
    DEFINED AS !
        This attribute provides an identifier for the serviceProvLRN
        object. The NPAC SMS determines the value for this attribute.

        The NPAC SMS currently uses a 32-bit signed integer for the
        Naming ID Value. The maximum value is  $([2^{*31}] - 1)$  or 2.14B.
        It is anticipated that all Service Providers will be able to
        successfully handle Naming ID Values up to this maximum.
!;
```

```
-- 33.0 LNP Service Provider LRN Value
```

---

```
serviceProvLRN-Value ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.LRN;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR serviceProvLRN-Value-Behavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 33};

serviceProvLRN-Value-Behavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the value for a service
    provider LRN.

    The data is stored as packed decimal. For example, if the octets
    contained 01 23 45 67 89 then the LRN value would be displayed
    as 0123456789).
!;

-- 34.0 LNP Service Provider LSMS Address

serviceProvLSMS-Address ATTRIBUTE

  REGISTERED AS {LNP-OIDS.lnp-attribute 34};

serviceProvLSMS-AddressBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the service provider LSMS
    address and contact information.
!;

-- 35.0 LNP Service Provider Name

serviceProvName ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.ServiceProvName;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR serviceProvNameBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 35};

serviceProvNameBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is the English name for the service provider.
!;

-- 36.0 LNP Service Provider Network and Communications Address

serviceProvNetAddress ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.AddressInformation;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR serviceProvNetAddressBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 36};

serviceProvNetAddressBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the service provider network
    and communications facilities address and contact information.
!;

-- 37.0 LNP Service Provider NPA-NXX Creation Time Stamp
```

```
serviceProvNPA-NXX-CreationTimeStamp ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR serviceProvNPA-NXX-CreationTimeStampBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 37};

serviceProvNPA-NXX-CreationTimeStampBehavior BEHAVIOUR
  DEFINED AS !
    This attribute provides the timestamp of the creation of the
    serviceProvNPA-NXX object on the NPAC SMS.
!;

-- 38.0 LNP Service Provider NPA-NXX Effective Time Stamp

serviceProvNPA-NXX-EffectiveTimeStamp ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR serviceProvNPA-NXX-EffectiveTimeStampBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 38};

serviceProvNPA-NXX-EffectiveTimeStampBehavior BEHAVIOUR
  DEFINED AS !
    This attribute provides a timestamp as to when the
    NPA-NXX is available for LNP in the service provider networks.
!;

-- 39.0 LNP Service Provider NPA-NXX ID

serviceProvNPA-NXX-ID ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.NPA-NXX-ID;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR serviceProvNPA-NXX-ID-Behavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 39};

serviceProvNPA-NXX-ID-Behavior BEHAVIOUR
  DEFINED AS !
    This attribute provides an identifier for the
    serviceProvNPA-NXX object.
    The NPAC SMS determines the value for this attribute.

    The NPAC SMS currently uses a 32-bit signed integer for the
    Naming ID Value. The maximum value is ([2**31] - 1) or 2.14B.
    It is anticipated that all Service Providers will be able to
    successfully handle Naming ID Values up to this maximum.

!;

-- 40.0 LNP Service Provider NPA-NXX Value

serviceProvNPA-NXX-Value ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.NPA-NXX;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR serviceProvNPA-NXX-ValueBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 40};

serviceProvNPA-NXX-ValueBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify a portable NPA-NXX value.
!;
```

---

```
-- 41.0 LNP Service Provider Operations Address

serviceProvOperationsAddress ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.AddressInformation;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR serviceProvOperationsAddressBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 41};

serviceProvOperationsAddressBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the service provider
        operations contact address and contact information.
!;
```

```
-- 42.0 LNP Service Provider Repair Center Information

serviceProvRepairCenterInfo ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.AddressInformation;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR serviceProvRepairCenterInfoBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 42};

serviceProvRepairCenterInfoBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the repair center information
        for a service provider.
!;
```

```
-- 43.0 LNP Service Provider SOA Address

serviceProvSOA-Address ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.AddressInformation;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR serviceProvSOA-AddressBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 43};

serviceProvSOA-AddressBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the service provider SOA address
        and contact information.
!;
```

```
-- 44.0 LNP Service Provider System Link Information

serviceProvSysLinkInfo ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.NetworkAddressInformation;
    MATCHES FOR EQUALITY;
    BEHAVIOUR serviceProvSysLinkInfoBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 44};

serviceProvSysLinkInfoBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the system link address
        information for service provider for the SOA to NPAC SMS and
        NPAC SMS to Local SMS interfaces.
!;
```

```
-- 46.0 LNP Service Provider User Administration Contact Address
```

---

```
serviceProvUserAdminAddress ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.AddressInformation;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR serviceProvUserAdminAddressBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 46};

serviceProvUserAdminAddressBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the service provider
        user administration contact address and contact information.
    !;

-- 47.0 LNP Service Provider Web Address

serviceProvWebAddress ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.AddressInformation;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR serviceProvWebAddressBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 47};

serviceProvWebAddressBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the service provider Web
        interface address and contact information.
    !;

-- 48.0 LNP Subscription Activation Time Stamp

subscriptionActivationTimeStamp ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR subscriptionActivationTimeStampBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 48};

subscriptionActivationTimeStampBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is set by the NPAC SMS as the current time and date
        that the subscription version activation request was received
        from the new service provider.
    !;

-- 49.0 LNP Subscription Audit Attribute List

subscriptionAuditAttributeList ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.AuditAttributes;
    MATCHES FOR EQUALITY;
    BEHAVIOUR subscriptionAuditAttributeListBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 49};

subscriptionAuditAttributeListBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the list of attributes in
        a subscription version that are to be audited.
    !;

-- 50.0 LNP Subscription Audit ID

subscriptionAuditId ATTRIBUTE
```

---

```
WITH ATTRIBUTE SYNTAX LNP-ASN1.AuditId;
MATCHES FOR EQUALITY, ORDERING;
BEHAVIOUR subscriptionAuditIdBehavior;
REGISTERED AS {LNP-OIDS.lnp-attribute 50};
```

```
subscriptionAuditIdBehavior BEHAVIOUR
DEFINED AS !
```

This attribute provides an identifier for the subscriptionAudit managed objects. The value for this attribute is specified by the NPAC SMS.

The NPAC SMS currently uses a 32-bit signed integer for the Naming ID Value. The maximum value is  $([2^{31}] - 1)$  or 2.14B. It is anticipated that all Service Providers will be able to successfully handle Naming ID Values up to this maximum.

```
!;
```

```
-- 51.0 LNP Subscription Audit Name
```

```
subscriptionAuditName ATTRIBUTE
WITH ATTRIBUTE SYNTAX LNP-ASN1.AuditName;
MATCHES FOR EQUALITY, ORDERING, SUBSTRINGS;
BEHAVIOUR subscriptionAuditNameBehavior;
REGISTERED AS {LNP-OIDS.lnp-attribute 51};
```

```
subscriptionAuditNameBehavior BEHAVIOUR
DEFINED AS !
```

This attribute is used to specify the English name associated with an audit.

```
!;
```

```
-- 52.0 LNP Subscription Audit Number of TNs to be Audited
```

```
subscriptionAuditNumberOfTNs ATTRIBUTE
WITH ATTRIBUTE SYNTAX LNP-ASN1.AuditNumberOfTNs;
MATCHES FOR EQUALITY;
BEHAVIOUR subscriptionAuditNumberOfTNsBehavior;
REGISTERED AS {LNP-OIDS.lnp-attribute 52};
```

```
subscriptionAuditNumberOfTNsBehavior BEHAVIOUR
DEFINED AS !
```

This attribute is used to specify the number of TNs that will be audited based on the audit request criteria.

```
!;
```

```
-- 53.0 LNP Subscription Audit Number of TNs having Completed Audit
```

```
subscriptionAuditNumberOfTNsComplete ATTRIBUTE
WITH ATTRIBUTE SYNTAX LNP-ASN1.AuditNumberOfTNsComplete;
MATCHES FOR EQUALITY;
BEHAVIOUR subscriptionAuditNumberOfTNsCompleteBehavior;
REGISTERED AS {LNP-OIDS.lnp-attribute 53};
```

```
subscriptionAuditNumberOfTNsCompleteBehavior BEHAVIOUR
DEFINED AS !
```

This attribute is used to specify the number of TNs that have completed in an in progress or complete audit.

```
!;
```

---

```
-- 54.0 LNP Subscription Audit Requesting Service Provider

subscriptionAuditRequestingSP ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.ServiceProvId;
    MATCHES FOR EQUALITY;
    BEHAVIOUR subscriptionAuditRequestingSP-Behavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 54};

subscriptionAuditRequestingSP-Behavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the service provider who
        requested the audit.
!;
```

```
-- 55.0 LNP Subscription Audit Service Provider Id Range

subscriptionAuditServiceProvIdRange ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.AuditServiceProvIdRange;
    MATCHES FOR EQUALITY;
    BEHAVIOUR subscriptionAuditServiceProvIdRangeBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 55};

subscriptionAuditServiceProvIdRangeBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify a specific service provider
        or if all service providers should be audited in the subscription
        audit.
!;
```

```
-- 56.0 LNP Subscription Audit Status

subscriptionAuditStatus ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.AuditStatus;
    MATCHES FOR EQUALITY;
    BEHAVIOUR subscriptionAuditStatusBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 56};

subscriptionAuditStatusBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the status of an audit.  Valid
        values are in-progress, suspended, canceled, and complete.
!;
```

```
-- 57.0 LNP Subscription Audit TN Activation Range

subscriptionAuditTN-ActivationRange ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.AuditTN-ActivationRange;
    MATCHES FOR EQUALITY;
    BEHAVIOUR subscriptionAuditTN-ActivationRangeBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 57};

subscriptionAuditTN-ActivationRangeBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the activation date and time
        range for which TNs should be audited in the subscription audit.
!;
```

```
-- 59.0 LNP Subscription Audit TN Range
```

---

```
subscriptionAuditTN-Range ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.TN-Range;
    MATCHES FOR EQUALITY;
    BEHAVIOUR subscriptionAuditTN-RangeBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 59};

subscriptionAuditTN-RangeBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the TN range to be used for
        the subscription audit. The stop TN in the range must be
        greater than or equal to the start TN in the range.
!;
```

```
-- 60.0 LNP Subscription Billing Id

subscriptionBillingId ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.BillingId;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR subscriptionBillingIdBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 60};

subscriptionBillingIdBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the Billing Id for the
        subscription version.
!;
```

```
-- 61.0 LNP Subscription Broadcast Time Stamp

subscriptionBroadcastTimeStamp ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR subscriptionBroadcastTimeStampBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 61};

subscriptionBroadcastTimeStampBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the time stamp of when
        the subscription version was broadcast to the service provider
        Local SMSs.
!;
```

```
-- 62.0 LNP Subscription Cancellation Time Stamp

subscriptionCancellationTimeStamp ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR subscriptionCancellationTimeStampBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 62};

subscriptionCancellationTimeStampBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the cancellation time
        stamp for the subscription version. This field is only valid
        if the subscription version status is cancel.
!;
```

```
-- 63.0 LNP Subscription Version Class Destination Point Code
```

---

```
subscriptionCLASS-DPC ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.DPC;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionCLASS-DPCBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 63};

subscriptionCLASS-DPCBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the subscription version
    CLASS Destination Point Code.

    The data is stored in BCD (e.g. a value of FFFFFFFF would be displayed
    as 255.255.255).
!;

-- 64.0 LNP Subscription Version Class SSN

subscriptionCLASS-SSN ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.SSN;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionCLASS-SSN-Behavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 64};

subscriptionCLASS-SSN-Behavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the subscription version
    CLASS SSN.
!;

-- 65.0 LNP Subscription CNAM Destination Point Code

subscriptionCNAM-DPC ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.DPC;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionCNAM-DPC-Behavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 65};

subscriptionCNAM-DPC-Behavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the CNAM Destination Point
    value for the subscription version.

    The data is stored in BCD (e.g. a value of FFFFFFFF would be displayed
    as 255.255.255).
!;

-- 66.0 LNP Subscription CNAM SSN

subscriptionCNAM-SSN ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.SSN;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionCNAM-SSN-Behavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 66};

subscriptionCNAM-SSN-Behavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the CNAM SSN
    value for the subscription version.
```

```
!;

-- 67.0 LNP Subscription Conflict Time Stamp

subscriptionConflictTimeStamp ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionConflictTimeStampBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 67};

subscriptionConflictTimeStampBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the time stamp of when
    the subscription version was put into conflict.
!;

-- 68.0 LNP Subscription Creation Time Stamp

subscriptionCreationTimeStamp ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionCreationTimeStampBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 68};

subscriptionCreationTimeStampBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the creation date
    and time for a subscription version.
!;

-- 69.0 LNP Subscription Customer Disconnect Date

subscriptionCustomerDisconnectDate ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionCustomerDisconnectDateBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 69};

subscriptionCustomerDisconnectDateBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the time stamp of when the
    Subscription version was disconnected by the service provider.
!;

-- 70.0 LNP Subscription Disconnect Complete Date

subscriptionDisconnectCompleteTimeStamp ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionDisconnectCompleteTimeStampBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 70};

subscriptionDisconnectCompleteTimeStampBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the time stamp of when the
    subscription version disconnect broadcast was complete.
!;

-- 71.0 LNP Subscription Download Reason
```

```
subscriptionDownloadReason ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.DownloadReason;
    MATCHES FOR EQUALITY;
    BEHAVIOUR subscriptionDownloadReasonBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 71};

subscriptionDownloadReasonBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the reason the data was
        downloaded to the Local SMS from NPAC SMS. This attribute
        only has meaning in objects instantiated on the Local SMS and is
        not audited in subscription versions.
!;

-- 72.0 LNP Subscription Effective Release Date

subscriptionEffectiveReleaseDate ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR subscriptionEffectiveReleaseDateBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 72};

subscriptionEffectiveReleaseDateBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the time stamp of when the
        subscription version is to be disconnected. The status
        of the version must be disconnect pending.
!;

-- 73.0 LNP Subscription End User Location Type

subscriptionEndUserLocationType ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.EndUserLocationType;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR subscriptionEndUserLocationTypeBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 73};

subscriptionEndUserLocationTypeBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the End User Location Type
        for the subscription version. This field is included for
        future use.
!;

-- 74.0 LNP Subscription End User Location Value

subscriptionEndUserLocationValue ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.EndUserLocationValue;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR subscriptionEndUserLocationValueBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 74};

subscriptionEndUserLocationValueBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the End User Location Value
        for the subscription version. This field is included for
        future use.
!;
```

---

-- 75.0 LNP Subscription Failed Service Provider List

subscriptionFailed-SP-List ATTRIBUTE

WITH ATTRIBUTE SYNTAX LNP-ASN1.Failed-SP-List;  
MATCHES FOR EQUALITY;  
BEHAVIOUR subscriptionFailed-SP-ListBehavior;  
REGISTERED AS {LNP-OIDS.lnp-attribute 75};

subscriptionFailed-SP-ListBehavior BEHAVIOUR

DEFINED AS !

This attribute is used to store the failed service providers after a subscription version and/or number pool block broadcast results in a failed or partial failure subscription version and/or number pool block status.

A subscription version of LNP type equal to 'pool' will have a subscriptionFailed-SP-List for any non-EDR service providers who failed to receive the subscription version and any EDR service providers who failed to receive the number pool block.

!;

-- 76.0 LNP Subscription ISVM Destination Point Code

subscriptionISVM-DPC ATTRIBUTE

WITH ATTRIBUTE SYNTAX LNP-ASN1.DPC;  
MATCHES FOR EQUALITY, ORDERING;  
BEHAVIOUR subscriptionISVM-DPC-Behavior;  
REGISTERED AS {LNP-OIDS.lnp-attribute 76};

subscriptionISVM-DPC-Behavior BEHAVIOUR

DEFINED AS !

This attribute is used to specify the ISVM Destination Point value for the subscription version.

The data is stored in BCD (e.g. a value of FFFFFFFF would be displayed as 255.255.255).

!;

-- 77.0 LNP Subscription ISVM SSN

subscriptionISVM-SSN ATTRIBUTE

WITH ATTRIBUTE SYNTAX LNP-ASN1.SSN;  
MATCHES FOR EQUALITY, ORDERING;  
BEHAVIOUR subscriptionISVM-SSN-Behavior;  
REGISTERED AS {LNP-OIDS.lnp-attribute 77};

subscriptionISVM-SSN-Behavior BEHAVIOUR

DEFINED AS !

This attribute is used to specify the ISVM SSN value for the subscription version.

!;

-- 78.0 LNP Subscription LIDB Destination Point Code

subscriptionLIDB-DPC ATTRIBUTE

WITH ATTRIBUTE SYNTAX LNP-ASN1.DPC;  
MATCHES FOR EQUALITY, ORDERING;

---

```
BEHAVIOUR subscriptionLIDB-DPC-Behavior;
REGISTERED AS {LNP-OIDS.lnp-attribute 78};

subscriptionLIDB-DPC-Behavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the LIDB Destination Point
    value for the subscription version.

    The data is stored in BCD (e.g. a value of FFFFFFFF would be
    displayed as 255.255.255).
!;

-- 79.0 LNP Subscription LIDB SSN

subscriptionLIDB-SSN ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.SSN;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionLIDB-SSN-Behavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 79};

subscriptionLIDB-SSN-Behavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the LIDB SSN
    value for the subscription version.
!;

-- 80.0 LNP Subscription Local Number Portability Type

subscriptionLNPTType ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.LNPTType;
  MATCHES FOR EQUALITY;
  BEHAVIOUR subscriptionLNPTTypeBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 80};

subscriptionLNPTTypeBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the Local Number Portability
    type for the subscription version.
!;

-- 81.0 LNP Subscription LRN

subscriptionLRN ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.LRN;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionLRNBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 81};

subscriptionLRNBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the subscription LRN
    for a subscription version.

    The data is stored as packed decimal. For example, if the octets
    contained 01 23 45 67 89 then the LRN value would be displayed
    as 0123456789).
!;

-- 82.0 LNP Subscription Modified Time Stamp
```

```
subscriptionModifiedTimeStamp ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionModifiedTimeStampBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 82};

subscriptionModifiedTimeStampBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the last modification date
    for a subscription version.
!;

-- 83.0 LNP Subscription New or Current Service Provider

subscriptionNewCurrentSP ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.ServiceProvId;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionNewCurrentSPBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 83};

subscriptionNewCurrentSPBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the subscription New or Current
    Service Provider for a subscription version.

    This attribute is also used to store the new service provider
    for an old SP concurrence request notification in a log record.
!;

-- 84.0 LNP Subscription New Service Provider Cancellation Time Stamp

subscriptionNewSP-CancellationTimeStamp ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionNewSP-CancellationTimeStampBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 84};

subscriptionNewSP-CancellationTimeStampBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the subscription cancellation
    concurrence time stamp for the subscription in a
    cancel-pending state. This value is specified by the
    concurrence of the new service provider.
!;

-- 85.0 LNP Subscription New Service Provider Conflict Resolution Time Stamp

subscriptionNewSP-ConflictResolutionTimeStamp ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionNewSP-ConflictResolutionTimeStampBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 85};

subscriptionNewSP-ConflictResolutionTimeStampBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify when the subscription
    version was removed from conflict by the new service provider.
!;
```

---

```
-- 86.0 LNP Subscription New Service Provider Creation Time Stamp

subscriptionNewSP-CreationTimeStamp ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionNewSP-CreationTimeStampBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 86};

subscriptionNewSP-CreationTimeStampBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the time stamp of when
    the new service provider creates the cutover for the
    subscription from the old service provider. This timestamp is set
    by the NPAC SMS when the new service provider sends its create
    request.

    This attribute is also used to store the new service provider
    creation time stamp for an old SP concurrence request notification
    in a log record.

!;
```

```
-- 87.0 LNP Subscription New Service Provider Activation Due Date

subscriptionNewSP-DueDate ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionNewSP-DueDateBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 87};

subscriptionNewSP-DueDateBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the subscription due
    date and time for the subscription when they are being ported to
    a new service provider. This value is specified by the new service
    provider.

    If not specified, the time defaults to 00:00.00.

    The seconds field should always be populated with zeros for
    wireless ports. The NPAC SMS will not edit for compliance.

!;
```

```
-- 88.0 LNP Subscription Old Service Provider

subscriptionOldSP ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.ServiceProvId;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionOldSPBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 88};

subscriptionOldSPBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the subscription Old
    Service Provider for a subscription version.

    This attribute is also used to store the old service provider id
    for a new service provider create request notification in a
    log record.
```

```
!;
```

-- 89.0 LNP Subscription Old Service Provider Authorization

```
subscriptionOldSP-Authorization ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.ServiceProvAuthorization;
  MATCHES FOR EQUALITY;
  BEHAVIOUR subscriptionOldSP-AuthorizationBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 89};
```

subscriptionOldSP-AuthorizationBehavior BEHAVIOUR  
DEFINED AS !

This attribute is used to indicate the old service provider authorization or denial of cutover for the subscription to the new service provider.

This attribute is also used to store the old service provider authorization for a new service provider create request notification in a log record.

```
!;
```

-- 90.0 LNP Subscription Old Service Provider Authorization Time Stamp

```
subscriptionOldSP-AuthorizationTimeStamp ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionOldSP-AuthorizationTimeStampBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 90};
```

subscriptionOldSP-AuthorizationTimeStampBehavior BEHAVIOUR  
DEFINED AS !

This attribute is used to specify the time stamp of when the old service provider authorizes or denies the cutover for the subscription to the new service provider. This timestamp is set by the NPAC SMS when the old service provider sends its create request or modifies the authorization information for activation.

This attribute is also used to store the old service provider authorization timestamp for an old service provider concurrence request notification in a log record.

```
!;
```

-- 91.0 LNP Subscription Old Service Provider Cancellation Time Stamp

```
subscriptionOldSP-CancellationTimeStamp ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionOldSP-CancellationTimeStampBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 91};
```

subscriptionOldSP-CancellationTimeStampBehavior BEHAVIOUR  
DEFINED AS !

This attribute is used to specify the subscription cancellation time stamp for the subscription version. This value is set by the NPAC SMS.

```
!;
```

-- 92.0 LNP Subscription Old Service Provider Conflict Resolution Time Stamp

---

```
subscriptionOldSP-ConflictResolutionTimeStamp ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionOldSP-ConflictResolutionTimeStampBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 92};

subscriptionOldSP-ConflictResolutionTimeStampBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify when the subscription
    version was removed from conflict by the old service provider.
  !;

-- 93.0 LNP Subscription Old Service Provider Cutover Due Date

subscriptionOldSP-DueDate ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionOldSP-DueDateBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 93};

subscriptionOldSP-DueDateBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the subscription due
    date and time for the subscription when they are being ported to a new
    service provider from an old service provider.  This value
    is specified by the old service provider.

    The time if not specified with the date is defaulted to 00:00.00.

    The seconds field should always be populated with zeros for
    wireless ports. The NPAC SMS will not edit for compliance.
  !;

-- 94.0 LNP Subscription Old Time Stamp

subscriptionOldTimeStamp ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionOldTimeStampBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 94};

subscriptionOldTimeStampBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the old time
    stamp for the subscription version.  This field is only valid
    if the subscription version status is old.
  !;

-- 95.0 LNP Subscription Porting To Original SP Switch

subscriptionPortingToOriginal-SPSwitch ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.SubscriptionPortingToOriginal-SPSwitch;
  MATCHES FOR EQUALITY;
  BEHAVIOUR subscriptionPortingToOriginal-SPSwitchBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 95};

subscriptionPortingToOriginal-SPSwitchBehavior BEHAVIOUR
```

---

```
DEFINED AS !
    This attribute is used to specify that the subscription version
    created is to be ported back to the original service
    provider switch.
!;

-- 96.0 LNP Subscription Pre-Cancellation Status

subscriptionPreCancellationStatus ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.SubscriptionPreCancellationStatus;
    MATCHES FOR EQUALITY;
    BEHAVIOUR subscriptionPreCancellationStatusBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 96};

subscriptionPreCancellationStatusBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the previous status of a
        canceled subscription version.
!;

-- 97.0 LNP Subscription Version TN

subscriptionTN ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.PhoneNumber;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR subscriptionTN-Behavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 97};

subscriptionTN-Behavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the subscription version TN .

        This attribute is also used to store the subscription version TN
        for a new SP create request and a old service provider concurrence
        request notification in a log record.
!;

-- 98.0 LNP Subscription Version Attribute Value Change Information

subscriptionVersionAttributeValueChangeInfo ATTRIBUTE
    WITH ATTRIBUTE SYNTAX Notification-ASN1Module.AttributeValueChangeInfo;
    MATCHES FOR EQUALITY;

    REGISTERED AS {LNP-OIDS.lnp-attribute 98};

subscriptionVersionAttributeValueChangeInfoBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to store the attribute value change
        information for a subscription version or number pool block
        status attribute value change notification in a log record.
!;

-- 99.0 LNP Subscription Version Id

subscriptionVersionId ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.SubscriptionVersionId;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR subscriptionVersionIdBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 99};
```

```
subscriptionVersionIdBehavior BEHAVIOUR
  DEFINED AS !
    This attribute provides an identifier for the
    lnpSubscriptions and subscriptionVersion objects.  The
    NPAC SMS determines the value for this attribute.

    The NPAC SMS currently uses a 32-bit signed integer for the
    Naming ID Value.  The maximum value is ([2**31] - 1) or 2.14B.
    It is anticipated that all Service Providers will be able to
    successfully handle Naming ID Values up to this maximum.

    This attribute is also used to store the subscription version Id
    in notification log records.
!;

-- 100.0 LNP Subscription Version Status

subscriptionVersionStatus ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.VersionStatus;
  MATCHES FOR EQUALITY;
  BEHAVIOUR subscriptionVersionStatusBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 100};

subscriptionVersionStatusBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the status of the
    subscription version.  Valid values are pending,
    conflict, sending, active, failed, partial failure, old,
    canceled, disconnect-pending, and cancel-pending.
!;

-- 101.0 LNP LSMS Filter NPA-NXX ID

lsmsFilterNPA-NXX-ID ATTRIBUTE

  MATCHES FOR EQUALITY;
  BEHAVIOUR lsmsFilterNPA-NXX-ID-Behavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 101};

lsmsFilterNPA-NXX-ID-Behavior BEHAVIOUR
  DEFINED AS !
    This attribute provides an identifier for the
    lsmsFilterNPA-NXX object.  The NPAC SMS determines the value
    for this attribute.

    The NPAC SMS currently uses a 32-bit signed integer for the
    Naming ID Value.  The maximum value is ([2**31] - 1) or 2.14B.
    It is anticipated that all Service Providers will be able to
    successfully handle Naming ID Values up to this maximum.
!;

-- 102.0 LNP LSMS Filter NPA-NXX Value

lsmsFilterNPA-NXX-Value ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.NPA-NXX;
  MATCHES FOR EQUALITY;
  BEHAVIOUR lsmsFilterNPA-NXX-ValueBehavior;
```

---

```
REGISTERED AS {LNP-OIDS.lnp-attribute 102};

lsmnsFilterNPA-NXX-ValueBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify a portable NPA-NXX value.
!;

-- 103.0 LNP Subscription Status Change Cause Code

subscriptionStatusChangeCauseCode ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.SubscriptionStatusChangeCauseCode;
  MATCHES FOR EQUALITY;
  BEHAVIOUR subscriptionStatusChangeCauseCodeBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 103};

subscriptionStatusChangeCauseCodeBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to indicate the reason for putting a
    subscription version into conflict.
!;

-- 104.0 LNP Service Provider Security Address

serviceProvSecurityAddress ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.AddressInformation;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR serviceProvSecurityAddressBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 104};

serviceProvSecurityAddressBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the security contact information
    for a service provider.
!;

-- 105.0 LNP NPAC Association User Info

npacAssociationUserInfo ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.NpacAssociationUserInfo;
  MATCHES FOR EQUALITY;
  BEHAVIOUR npacAssociationUserInfoBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 105};

npacAssociationUserInfoBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to report the status of a login attempt or
    the current state of the NPAC SMS.
!;

-- 106.0 LNP SOA Name

lnpSOA-Name ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.LnpSMS-Name;
  MATCHES FOR EQUALITY;
  BEHAVIOUR lnpSOA-NameBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 106};

lnpSOA-NameBehavior BEHAVIOUR
  DEFINED AS !
```

---

```
This attribute provides an identifier for the lnpSOA
object. The valid value is the service provider id of the
SOA followed by a dash and then the region name of the
NPAC-SMS specified in the lnpNPAC-SMS-Name for the SOA to
NPAC SMS Interface. For example, if the region name is
"Midwest Regional NPAC SMS" and the service provider id is "1234",
the lnpSOA-Name would be "1234-Midwest Regional NPAC SMS".

!;
```

```
-- 107.0 Subscription Version Timer Type

subscriptionTimerType ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.Integer;
  MATCHES FOR EQUALITY;
  BEHAVIOUR subscriptionTimerTypeBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 107};

subscriptionTimerTypeBehavior BEHAVIOUR
  DEFINED AS !
  This attribute is used to specify the subscription version
  timer type being used to set tunable timers.

  Current valid values are:
  0 for long timers (used primarily for wireline to wireline)
  1 for short timers (anticipated use for wireless to wireless)

  Long timers (0) is set if any of the two service providers
  supports only long timers.

!;
```

```
-- 108.0 Subscription Version Business Type

subscriptionBusinessType ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.Integer;
  MATCHES FOR EQUALITY;
  BEHAVIOUR subscriptionTimerTypeBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 108};

subscriptionBusinessTypeBehavior BEHAVIOUR
  DEFINED AS !
  This attribute is used to specify the subscription version
  business hours/days type being used to set tunable timers.

  Current valid values are:
  0 for short business hours/days
    (used primarily for wireline to wireline)
  1 for long business hours/days
    (anticipated use for wireless to wireless)

  Short business hours (0) is set if any of the two
  service providers supports only short business hours.

!;
```

```
-- 109.0 Subscription Version WSMSC Destination Point Code

subscriptionWSMSC-DPC ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.DPC;
  MATCHES FOR EQUALITY, ORDERING;
```

---

```
BEHAVIOUR subscriptionWSMSC-DPCBehavior;
REGISTERED AS {LNP-OIDS.lnp-attribute 109};

subscriptionWSMSC-DPCBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the subscription version
    WSMSC Destination Point Code.

    The data is stored in BCD (e.g. a value of FFFFFFF would be
    displayed as 255.255.255).
  !;

-- 110.0 LNP Subscription Version WSMSC SSN

subscriptionWSMSC-SSN ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.SSN;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR subscriptionWSMSC-SSN-Behavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 110};

subscriptionWSMSC-SSN-Behavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the subscription version
    WSMSC SSN.
  !;

-- 111.0 LNP Number Pool Block Activation TimeStamp

numberPoolBlockActivationTimeStamp ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR numberPoolBlockActivationTimeStampBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 111};

numberPoolBlockActivationTimeStampBehavior BEHAVIOUR
  DEFINED AS !
    This attribute defines the current date and time when the
    create request is received for the number pool block.
  .
  !;

-- 112.0 LNP Number Pool Block Broadcast TimeStamp

numberPoolBlockBroadcastTimeStamp ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR numberPoolBlockBroadcastTimeStampBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 112};

numberPoolBlockBroadcastTimeStampBehavior BEHAVIOUR
  DEFINED AS !
    This attribute defines the date and time when the NPAC starts any
    broadcast of the number pool block to the LSMs.
  !;

-- 113.0 LNP Number Pool Block Creation TimeStamp

numberPoolBlockCreationTimeStamp ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
```

---

```
MATCHES FOR EQUALITY, ORDERING;
BEHAVIOUR numberPoolBlockCreationTimeStampBehavior;
REGISTERED AS {LNP-OIDS.lnp-attribute 113};

numberPoolBlockCreationTimeStampBehavior BEHAVIOUR
  DEFINED AS !
    This attribute defines the date and time of the number pool block
    creation.
!;
```

```
-- 114.0 LNP Number Pool block Class Destination Point Code

numberPoolBlockCLASS-DPC ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.DPC;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR numberPoolBlockCLASS-DPCBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 114};

numberPoolBlockCLASS-DPCBehavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the numberPoolBlock
    CLASS Destination Point Code.

    The data is stored in BCD (e.g. a value of FFFFFFFF would be displayed
    as 255.255.255). The valid octet values on the NPAC SMS are 000-255.
!;
```

```
-- 115.0 LNP Number Pool Block Class SSN

numberPoolBlockCLASS-SSN ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.SSN;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR numberPoolBlockCLASS-SSN-Behavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 115};

numberPoolBlockCLASS-SSN-Behavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the numberPoolBlock
    CLASS SSN. The valid values on the NPAC SMS are 0-255.
!;
```

```
-- 116.0 LNP Number Pool Block CNAM Destination Point Code

numberPoolBlockCNAM-DPC ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.DPC;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR numberPoolBlockCNAM-DPC-Behavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 116};

numberPoolBlockCNAM-DPC-Behavior BEHAVIOUR
  DEFINED AS !
    This attribute is used to specify the CNAM Destination Point
    Code for the numberPoolBlock.

    The data is stored in BCD (e.g. a value of FFFFFFFF would be displayed
    as 255.255.255). The valid octet values on the NPAC SMS are 000-255.
!;
```

---

```
-- 117.0 LNP Number Pool Block CNAM SSN

numberPoolBlockCNAM-SSN ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.SSN;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR numberPoolBlockCNAM-SSN-Behavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 117};

numberPoolBlockCNAM-SSN-Behavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the CNAM SSN
        value for the numberPoolBlock. The valid values on the
        NPAC SMS are 0-255.
!;

-- 118.0 LNP Number Pool Block Disconnect Complete TimeStamp

numberPoolBlockDisconnectCompleteTimeStamp ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR numberPoolBlockDisconnectCompleteTimeStampBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 118};

numberPoolBlockDisconnectCompleteTimeStampBehavior BEHAVIOUR
    DEFINED AS !
        This attribute defines the date and time the disconnect broadcast
        of the number pool block is complete to the LSMSs. This is set
        once the first successful response is received for the number pool
        block or corresponding subscription version with LNP type equal
        to 'pool'.
!;

-- 119.0 LNP Number Pool Block Data Download Reason

numberPoolBlockDownloadReason ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.DownloadReason;
    MATCHES FOR EQUALITY;
    BEHAVIOUR numberPoolBlockDownloadReasonBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 119};

numberPoolBlockDownloadReasonBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the reason the number pool block was
        downloaded to the Local SMS from NPAC SMS. This attribute only
        has meaning in objects instantiated on the Local SMS.
!;

-- 120.0 LNP Number Pool Block Failed Service Provider List

numberPoolBlockFailed-SP-List ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.Failed-SP-List;
    MATCHES FOR EQUALITY;
    BEHAVIOUR numberPoolBlockFailed-SP-ListBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 120};

numberPoolBlockFailed-SP-ListBehavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to store the failed service providers after
        a subscription version and/or number pool block broadcast results in a
```

---

```
failure to one or more Local SMSs for a subscription version with
LNP type equal to 'pool' and/or number pool block.

A numberPoolBlockFailed-SP-List reflects the EDR service
providers who failed to receive the number pool block and any non-EDR
service provider who failed to receive the corresponding subscription
versions of LNP type equal to 'pool'.

!;

-- 121.0 LNP Number Pool Block Service Provider ID

numberPoolBlockHolderSPID ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.ServiceProvId;
  MATCHES FOR EQUALITY;
  BEHAVIOUR numberPoolBlockHolderSPIDBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 121};

numberPoolBlockHolderSPIDBehavior BEHAVIOUR
  DEFINED AS !
  This attribute defines the service provider ID of the block holder.
!;

-- 122.0 LNP Number Pool Block Id

numberPoolBlockId ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.BlockId;
  MATCHES FOR EQUALITY;
  BEHAVIOUR numberPoolBlockIdBehavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 122};

numberPoolBlockIdBehavior BEHAVIOUR
  DEFINED AS !
  This attribute provides an identifier for the
  numberPoolBlock object. The NPAC SMS determines the value
  for this attribute.

  The NPAC SMS currently uses a 32-bit signed integer for the
  Naming ID Value. The maximum value is ( $2^{31} - 1$ ) or 2.14B.
  It is anticipated that all Service Providers will be able to
  successfully handle Naming ID Values up to this maximum.

!;

-- 123.0 LNP Number Pool Block ISVM Destination Point Code

numberPoolBlockISVM-DPC ATTRIBUTE
  WITH ATTRIBUTE SYNTAX LNP-ASN1.DPC;
  MATCHES FOR EQUALITY, ORDERING;
  BEHAVIOUR numberPoolBlockISVM-DPC-Behavior;
  REGISTERED AS {LNP-OIDS.lnp-attribute 123};

numberPoolBlockISVM-DPC-Behavior BEHAVIOUR
  DEFINED AS !
  This attribute is used to specify the ISVM Destination Point
  Code for the numberPoolBlock.

  The data is stored in BCD (e.g. a value of FFFFFFFF would be
  displayed as 255.255.255). The valid octet values on the NPAC SMS
  are 000-255.

!;
```

```
-- 124.0 LNP Number Pool Block ISVM SSN

numberPoolBlockISVM-SSN ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.SSN;

    BEHAVIOUR numberPoolBlockISVM-SSN-Behavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 124};

numberPoolBlockISVM-SSN-Behavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the ISVM SSN
        value for the numberPoolBlock. The valid values on the
        NPAC SMS are 0-255.
!;

-- 125.0 LNP Number Pool Block LIDB Destination Point Code

numberPoolBlockLIDB-DPC ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.DPC;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR numberPoolBlockLIDB-DPC-Behavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 125};

numberPoolBlockLIDB-DPC-Behavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the LIDB Destination Point
        Code for the numberPoolBlock.

        The data is stored in BCD (e.g. a value of FFFFFFFF would be
        displayed as 255.255.255). The valid octet on the NPAC SMS are 000-
255.
!;

-- 126.0 LNP Number Pool Block LIDB SSN

numberPoolBlockLIDB-SSN ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.SSN;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR numberPoolBlockLIDB-SSN-Behavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 126};

numberPoolBlockLIDB-SSN-Behavior BEHAVIOUR
    DEFINED AS !
        This attribute is used to specify the LIDB SSN
        value for the numberPoolBlock. The valid values on the
        NPAC SMS are 0-255.
!;

-- 127.0 LNP Number Pool Block LRN

numberPoolBlockLRN ATTRIBUTE
    WITH ATTRIBUTE SYNTAX LNP-ASN1.LRN;
    MATCHES FOR EQUALITY, ORDERING;
    BEHAVIOUR numberPoolBlockLRNBehavior;
    REGISTERED AS {LNP-OIDS.lnp-attribute 127};

numberPoolBlockLRNBehavior BEHAVIOUR
    DEFINED AS !
```

---

This attribute is used to specify the numberPoolBlock LRN for a numberPoolBlock.

The data is stored as packed decimal. For example, if the octets contained 01 23 45 67 89 then the LRN value would be displayed as 0123456789).

!;

-- 128.0 LNP Number Pool Block Last Modified TimeStamp

numberPoolBlockModifiedTimeStamp ATTRIBUTE  
WITH ATTRIBUTE SYNTAX LNP-ASN1.GeneralTime;  
MATCHES FOR EQUALITY, ORDERING;  
BEHAVIOUR numberPoolBlockModifiedTimeStampBehavior;  
REGISTERED AS {LNP-OIDS.lnp-attribute 128};

numberPoolBlockModifiedTimeStampBehavior BEHAVIOUR  
DEFINED AS !  
This attribute defines the date and time of the last modification to the numberPoolBlock object.

!;

-- 129.0 LNP Number Pool Block SOA Origination

numberPoolBlockSOA-Origination ATTRIBUTE  
WITH ATTRIBUTE SYNTAX LNP-ASN1.Boolean;  
MATCHES FOR EQUALITY;  
BEHAVIOUR numberPoolBlockSOA-OriginationBehavior;  
REGISTERED AS {LNP-OIDS.lnp-attribute 129};

numberPoolBlockSOA-OriginationBehavior BEHAVIOUR  
DEFINED AS !  
This boolean value indicates whether or not the service provider's SOA initiated the block over the SOA to NPAC SMS interface and whether the SOA will receive notifications for this object.

This attribute will be set by the NPAC SMS at the time of block creation and can be updated only by NPAC SMS personnel.

!;

-- 130.0 LNP Number Pool Block NPA-NXX-X

numberPoolBlockNPA-NXX-X ATTRIBUTE  
WITH ATTRIBUTE SYNTAX LNP-ASN1.NPA-NXX-X;

lnpDownload ACTION
    BEHAVIOUR
        lnpDownloadDefinition,
        lnpDownloadBehavior;
    MODE CONFIRMED;
    WITH INFORMATION SYNTAX LNP-ASN1.DownloadAction;
    WITH REPLY SYNTAX LNP-ASN1.DownloadReply;
    REGISTERED AS {LNP-OIDS.lnp-action 1};

lnpDownloadDefinition BEHAVIOUR
DEFINED AS !
    The lnpDownload action is the action that is used by the Local SMS
    and SOA to specify the objects to be downloaded from the NPAC SMS.
!;

lnpDownloadBehavior BEHAVIOUR
DEFINED AS !
    Preconditions: This action is issued from an lnpSubscriptions
    or an lnpNetwork object and all objects to be downloaded
    are specified in the action request.

    Postconditions: After this action has been executed by the Local
    SMS or SOA specifying which objects to download, the NPAC SMS will
    determine which objects satisfy the download request and return
    them in the download action reply. Creation, deletion, and
    modification information will be included in the reply. All data
```

---

for objects that have been modified is downloaded not just the information that was modified.

Data to be downloaded can be specified by a time range of last modification/creation or by other criteria. Time range requests will be limited to a tunable range specified in the NPAC SMS, and must be specified in Coordinated Universal Time (UTC). All data modified/created in the download time period, regardless of the amount of data, will be downloaded. For download requests not specifying a time range, the amount of data downloaded will be limited to a tunable amount as specified in the NPAC SMS.

Criteria for a subscription download is a time range or a TN or TN range. For TN ranges the stop TN in the range must be greater than the start TN in the range. If the NPAC Customer LSMS EDR Indicator is set in the service provider's profile on the NPAC SMS, no subscription versions with LNP type equal to 'pool' will be returned. NPA-NXX filters are also applied.

Criteria for a number pool block download is time range, NPA-NXX-X range or NPA-NXX-X.

Criteria for a network data download is a time range, service provider id or all service providers, an npa-nxx range or all npa-nxx data, an npa-nxx-x range or all npa-nxx-x data, an LRN range or all LRN data, or all network data. Specifying "all-network-data" includes the serviceProvNPA-NXX-X object if the Local SMS supports the object according to their service provider profile NPAC Customer LSMS NPA-NXX-X Indicator. The SOA supports the object according to their service provider profile NPAC Customer SOA NPA-NXX-X Indicator.

For all download requests, the Local SMS or SOA should behave as follows in response to the possible download M-ACTION response from the NPAC SMS:

Success - process the data received from the NPAC SMS, continue processing.

No-data-selected -- no data was found, continue processing.

Criteria-too-large (using the Maximum Number of Download Records tunable) - break up the request into a smaller time range and re-issue the request to the NPAC SMS (only applies to the subscription version requests).

OR

Criteria-too-large (using the Maximum Number of Download Notifications tunable) - break up the request into a smaller

time

ranges and re-issue the request to the NPAC SMS.

Time-range-invalid (using the Maximum Download Duration tunable) - break up the request into shorter time ranges and re-issue the request to the NPAC SMS.

Failed - go into retry mode. Re-issue the request a configurable number of additional retry attempts with an "x" amount of delay between requests ("x" is a configurable amount of time after receiving the failure for each request). If a failed response

---

is received for the final retry request, abort the association and re-start the recovery process. Note: It is recommended that the Local SMS or SOA use the same value that the NPAC SMS uses for the retry interval. It is also recommended that the Local

SMS use a value of at least two (2) for configurable number of additional retry attempts.

For activities that specify "continue processing", the Local SMS or SOA should send the NPAC SMS, either the next lnpDownload action for a different type of data, or an lnpRecoveryComplete request, depending on where the response appears in the flow.

SOAs can use the lnpDownload action to recover network data. The lnpNotificationRecovery action is used to recover notification data.

Local SMSs can use the lnpDownload action to recover network data and subscription version data. The lnpNotificationRecovery action is used to recover notification data.

The SOA or LSMS is capable of recovering data based on the association functions. The SOA recovers network data using the data download association function (dataDownload). The SOA recovers notification data using the network data management association function (networkDataMgmt).

The LSMS recovers network data and subscription data using the data download association function (dataDownload) and recovers notification data using the network data management association function (networkDataMgmt).

  MODE CONFIRMED;
  WITH INFORMATION SYNTAX LNP-ASN1.RecoveryCompleteAction;
  WITH REPLY SYNTAX LNP-ASN1.RecoveryCompleteReply;
  REGISTERED AS {LNP-OIDS.lnp-action 2};

lnpRecoveryCompleteDefinition BEHAVIOUR
  DEFINED AS !
    The lnpRecoveryComplete action is used by the Local SMS or SOA
    to specify the system has recovered from downtime and the
    transactions performed since the association establishment can now be
    sent from the NPAC SMS.
  !;
```

```
lnpRecoveryCompleteBehavior BEHAVIOUR
```

---

DEFINED AS !

Preconditions: This action is issued from an LSMS or SOA that specified the recovery mode flag in the access control as true at association establishment.

Postconditions: After this action has been executed by the Local SMS or SOA specifying recovery is complete, the NPAC SMS will forward those updates requested which took place for the network subscription and number pool block data as well as any notifications since the association was established. The NPAC SMS will queue up all new events while the Local SMS is in recovery mode and send them to the Local SMS at the next scheduled retry interval after responding with the lnpRecoveryComplete action reply.

If a recovery complete request fails in the NPAC SMS the failure reason will be returned in the reply.

The NPAC SMS will queue up all new events while the Local SMS is in recovery mode, and send them to the Local SMS after responding with the lnpRecoveryComplete action reply.

-- 3.0 LNP Subscription Version Activate Action

subscriptionVersionActivate ACTION

BEHAVIOUR

subscriptionVersionActivateDefinition,  
subscriptionVersionActivateBehavior;

MODE CONFIRMED;

WITH INFORMATION SYNTAX LNP-ASN1.ActivateAction;

WITH REPLY SYNTAX LNP-ASN1.ActivateReply;

REGISTERED AS {LNP-OIDS.lnp-action 3};

subscriptionVersionActivateDefinition BEHAVIOUR

DEFINED AS !

The subscriptionVersionActivate action is the action that can be used by the SOA of the new service provider to activate a subscription version id, tn or a range of tns via the SOA to NPAC SMS interface.

!;

subscriptionVersionActivateBehavior BEHAVIOUR

DEFINED AS !

Preconditions: This action is issued from an lnpSubscriptions object specifying the object or range of objects to be activated by either subscriptionVersionId, the subscriptionTN or range of TNs (where the stop TN in the range is greater than the start TN).

Subscription versions with subscriptionLNPTtype equal to 'pool' cannot be specified in the action.

Postconditions: The service provider has activated the subscription version. An error will be returned if the subscription version can not be activated for any reason.

Only pending subscription versions can be activated. Attempts to

---

```
port subscription versions that have not been authorized by both
service providers will fail unless the due date has been reached.

!;

-- 4.0 LNP Subscription Version Cancel Action

subscriptionVersionCancel ACTION
  BEHAVIOUR
    subscriptionVersionCancelDefinition,
    subscriptionVersionCancelBehavior;
  MODE CONFIRMED;
  WITH INFORMATION SYNTAX LNP-ASN1.CancelAction;
  WITH REPLY SYNTAX LNP-ASN1.CancelReply;
  REGISTERED AS {LNP-OIDS.lnp-action 4};

subscriptionVersionCancelDefinition BEHAVIOUR
  DEFINED AS !
    The subscriptionVersionCancel action is the action that can be
    used by the SOA to cancel a subscription version via the SOA to
    NPAC SMS interface.

!;

subscriptionVersionCancelBehavior BEHAVIOUR
  DEFINED AS !
    Preconditions: This action is issued from an lnpSubscriptions
    object specifying the object or objects to be canceled by either
    the subscriptionVersionId, the subscriptionTN or a range of TNs
    (where the stop TN in the range is greater than the start TN).

    Postconditions: The service provider has set the version status
    to cancel-pending if the other service provider has concurred, or
    to cancel if the other service provider has not concurred. An
    error will be returned if there is no version that can be canceled
    or the service provider is not authorized.

!;

-- 5.0 LNP Subscription Version Disconnect Action

subscriptionVersionDisconnect ACTION
  BEHAVIOUR
    subscriptionVersionDisconnectDefinition,
    subscriptionVersionDisconnectBehavior;
  MODE CONFIRMED;
  WITH INFORMATION SYNTAX LNP-ASN1.DisconnectAction;
  WITH REPLY SYNTAX LNP-ASN1.DisconnectReply;
  REGISTERED AS {LNP-OIDS.lnp-action 5};

subscriptionVersionDisconnectDefinition BEHAVIOUR
  DEFINED AS !
    The subscriptionVersionDisconnect action is the action that is
    used by the SOA to disconnect a subscription version via the SOA to
    NPAC SMS interface.

!;

subscriptionVersionDisconnectBehavior BEHAVIOUR
  DEFINED AS !
    Preconditions: This action is issued from an lnpSubscriptions
    object and specifies the object or objects to be disconnected by
```

either stating the subscriptionVersionId, the subscriptionTN or a range of TNs (where the stop TN in the range is greater than the start TN). In addition, the customer's disconnect date is specified. An optional effective release date can be specified for a time deferred disconnect.

Subscription versions with subscriptionLNPTType equal to 'pool' cannot be specified in the action.

Postconditions: The current service provider can disconnect an active subscription version. An error will be returned to the service provider if there is no active version. If there is a pending version and an active version, the disconnect of the active subscription version will fail.

If the version is active, no outstanding versions exist, and the time stamp for disconnect has not been reached, the subscription version will be modified with a version status of disconnect-pending and the subscriptionEffectiveReleaseDate set to the effective release date specified in the action.

If the version is active, there are no outstanding versions, and the time stamp for effective release has not been specified, the subscription version will be updated with a version status of sending.

When the new subscription version status is set to sending either immediately or at the date and time specified in the subscriptionEffectiveReleaseDate, the broadcast time stamp is set to the current time when the disconnect version sending starts to the Local SMSs via the NPAC SMS to Local SMS interface.

Before the broadcast of deletes begins, the subscriptionVersionDonorSP-CustomerDisconnectDate notification is sent to the donor SOA informing the service provider of the actual customer disconnect date.

If the delete requests are successful for all Local SMSs, the current active version will have its version status marked as old and the subscriptionDisconnectCompleteTimeStamp is set to the current system date and time.

If a delete request fails for the disconnect subscription version after the retry periods have expired, the version status will be set to active if all Local SMSs fail, or set to old if one or more, but not all, Local SMSs fail.

!;

-- 6.0 LNP Subscription Version Local SMS Create Action

```
subscriptionVersionLocalSMS-Create ACTION
  BEHAVIOUR
    subscriptionVersionLocalSMS-CreateDefinition,
    subscriptionVersionLocalSMS-CreateBehavior;
  MODE CONFIRMED;
  WITH INFORMATION SYNTAX LNP-ASN1.LocalSMS-CreateAction;
  WITH REPLY SYNTAX LNP-ASN1.LocalSMS-CreateReply;
  REGISTERED AS {LNP-OIDS.lnp-action 6};
```

---

```
subscriptionVersionLocalSMS-CreateDefinition BEHAVIOUR
```

```
  DEFINED AS !
```

```
    The subscriptionVersionLocalSMS-Create action is the action that is
    used by the NPAC SMS to create multiple subscription versions via the
    Local SMS to NPAC SMS interface.
```

```
  !;
```

```
subscriptionVersionLocalSMS-CreateBehavior BEHAVIOUR
```

```
  DEFINED AS !
```

```
    Preconditions: This action is issued from an lnpSubscriptions
    object specifying the objects in a range to be created by
    the subscriptionVersionId and the subscriptionTN. All attribute
    values required for creation will be supplied.
```

```
    Postconditions: A successful reply indicates the Local SMS can
    decipher the subscription version create action. An error will be
    returned to the NPAC SMS if the Local SMS cannot recognize the
    action data.
```

```
    The Local SMS will attempt to create all the specified subscription
    versions. It will return the subscriptionVersionActionResults
    notification to the NPAC SMS informing it of the success or
    failure of the creation attempts.
```

```
    For Release 1.4 Number Pooling Support:
```

```
    There will be no need on the part of the LSMS to validate
    the TN-range. The LSMS will use the subscriptionVersionObjects
    to create the subscription versions for the TN range in the LSMS.
    This is done to insure that the subscription version ids used
    in the NPAC SMS and the Local SMS are the same.
```

```
  !;
```

```
-- 7.0 LNP Subscription Version Modify Action
```

```
subscriptionVersionModify ACTION
```

```
  BEHAVIOUR
```

```
    subscriptionVersionModifyDefinition,
    subscriptionVersionModifyBehavior;
```

```
  MODE CONFIRMED;
```

```
  WITH INFORMATION SYNTAX LNP-ASN1.ModifyAction;
```

```
  WITH REPLY SYNTAX LNP-ASN1.ModifyReply;
```

```
  REGISTERED AS {LNP-OIDS.lnp-action 7};
```

```
subscriptionVersionModifyDefinition BEHAVIOUR
```

```
  DEFINED AS !
```

```
    The subscriptionVersionModify action is the action that can be
    used by the SOA to modify a subscription version via the SOA to
    NPAC SMS interface.
```

```
  !;
```

```
subscriptionVersionModifyBehavior BEHAVIOUR
```

```
  DEFINED AS !
```

```
    Preconditions: This action is issued from an lnpSubscriptions
    object specifying the object to be modified by specifying
    the subscriptionVersionId or by specifying the subscriptionTN or
    a range of TNs (where the stop TN in the range is greater than
    the start TN) and the status of the subscription version. All
    attribute values to be modified shall also be specified.
```

Postconditions: The NPAC SMS has modified the subscription version. An error will be returned to the service provider if there is no version that is modifiable or if the modification fails due to authorization of the service provider or data validation.

Subscription versions with subscriptionLNPTType equal to 'pool' cannot be specified in the action.

Service Providers can modify attributes associated with active, pending or conflict subscription versions.

Old service providers can only modify the following attributes for pending or conflict subscription versions:

subscriptionOldSP-DueDate  
subscriptionOldSP-Authorization  
subscriptionStatusChangeCauseCode

The subscriptionStatusChangeCauseCode is an optional field and is only specified if the subscriptionOldSP-Authorization is false.

New service providers can only modify the following attributes for pending or conflict subscription versions:

subscriptionLRN  
subscriptionNewSP-DueDate  
subscriptionCLASS-DPC  
subscriptionCLASS-SSN  
subscriptionLIDB-DPC  
subscriptionLIDB-SSN  
subscriptionCNAM-DPC  
subscriptionCNAM-SSN  
subscriptionISVM-DPC  
subscriptionISVM-SSN  
subscriptionEndUserLocationValue  
subscriptionEndUserLocationType  
subscriptionBillingId

New service providers may specify modified valid values for the following attributes, when the service provider's "SOA WSMSC DPC SSN Data" indicator is TRUE, and may NOT specify these values when the indicator is set to FALSE:

subscriptionWSMSC-DPC  
subscriptionWSMSC-SSN

Validation will be done for both old and new service provider data that is specified for pending or conflict subscription versions.

If validation fails no changes will be made and an error will be returned. If validation passes, the version will be modified and remain in a pending or active state.

New service providers can only modify the following attributes for active subscription versions:

subscriptionLRN

---

```

subscriptionCLASS-DPC
subscriptionCLASS-SSN
subscriptionLIDB-DPC
subscriptionLIDB-SSN
subscriptionCNAM-DPC
subscriptionCNAM-SSN
subscriptionISVM-DPC
subscriptionISVM-SSN
subscriptionEndUserLocationValue
subscriptionEndUserLocationType
subscriptionBillingId

```

New service providers may specify modified valid values for the following attributes, when the service provider's "SOA WSMSC DPC SSN Data" indicator is TRUE, and may NOT specify these values when the indicator is set to FALSE:

```

subscriptionWSMSC-DPC
subscriptionWSMSC-SSN

```

If the data specified passes validation, the modified version is immediately broadcast. The modified subscription version will have a status of sending and broadcasts will begin. If validation fails, no changes will be made and an error will be returned in the action reply.

```

subscriptionVersionNewSP-CancellationAcknowledgeDefinition BEHAVIOUR
  DEFINED AS !
    The subscriptionVersionNewSP-CancellationAcknowledge action
    is the action that is used via the SOA to NPAC
    SMS interface by the new service provider to acknowledge
    cancellation of a subscriptionVersionNPAC with a status of
    cancel-pending.

```

```
!;
```

```

subscriptionVersionNewSP-CancellationAcknowledgeBehavior BEHAVIOUR
  DEFINED AS !
    Preconditions: This action was issued from an lnpSubscriptions
    object specifying the object or objects to be acknowledged by either
    the subscriptionVersionId, the subscriptionTN or a range of
    subscriptionTNs (where the stop TN in the range is greater than
    the start TN).

    Postconditions: The service provider has acknowledged the
    subscription version. An error will be returned to the service
    provider if no version exists that can have the cancellation

```

---

acknowledged or if the acknowledgement fails due to the service provider not being authorized to perform the action.

The subscriptionNewSP-CancellationTimeStamps will be updated to the current time if the action is successful and the version status is changed to cancel.

!;

-- 10.0 LNP Subscription Version Remove From Conflict

```
subscriptionVersionRemoveFromConflict ACTION
  BEHAVIOUR
    subscriptionVersionRemoveFromConflictDefinition,
    subscriptionVersionRemoveFromConflictBehavior;
  MODE CONFIRMED;
  WITH INFORMATION SYNTAX LNP-ASN1.RemoveFromConflictAction;
  WITH REPLY SYNTAX LNP-ASN1.RemoveFromConflictReply;
  REGISTERED AS {LNP-OIDS.lnp-action 10};
```

```
subscriptionVersionRemoveFromConflictDefinition BEHAVIOUR
  DEFINED AS !
    The subscriptionVersionRemoveFromConflict action
    is the action that is used via the SOA to NPAC
    SMS interface by either the old or new service provider to set the
    subscription version status from conflict to pending.
```

!;

```
subscriptionVersionRemoveFromConflictBehavior BEHAVIOUR
  DEFINED AS !
    Preconditions: This action was issued from an lnpSubscriptions
    object specifying the object or objects to be updated by either
    the subscriptionVersionId, the subscriptionTN or a range of
    subscriptionTNs (where the stop TN in the range is greater than
    the start TN).

    Postconditions: The NPAC SMS has acknowledged the
    subscription version. An error will be returned to the service
    provider if there is no version that can have the conflict
    status removed or if the service provider is not authorized to
    perform the action.

    If the action is successful, either the
    subscriptionNewSPConflictResolutionTimeStamps or
    subscriptionOldSP-ConflictResolutionTimeStamps will be updated to
    the current time, the version status will be changed from conflict
    to pending, and the subscriptionOldSP-Authorization attribute
    will be modified to true.
```

If the old service provider issues the action, the subscriptionOldSP-AuthorizationTimeStamps is also updated to the current date and time.

!;

-- 11.0 LNP New Service Provider Subscription Version Create

```
subscriptionVersionNewSP-Create ACTION
  BEHAVIOUR
    subscriptionVersionNewSP-CreateDefinition,
    subscriptionVersionNewSP-CreateBehavior;
```

---

```

MODE CONFIRMED;
WITH INFORMATION SYNTAX LNP-ASN1.NewSP-CreateAction;
WITH REPLY SYNTAX LNP-ASN1.NewSP-CreateReply;
REGISTERED AS {LNP-OIDS.lnp-action 11};

```

```

subscriptionVersionNewSP-CreateDefinition BEHAVIOUR
DEFINED AS !
    The subscriptionVersionNewSP-Create action is the action that is
    used via the SOA to NPAC SMS interface by the
    new service provider to create a new subscriptionVersionNPAC.
!;

```

```

subscriptionVersionNewSP-CreateBehavior BEHAVIOUR
DEFINED AS !
    Preconditions: This action is issued from an lnpSubscriptions
    object. Creates can be performed provided there is only one
    currently active subscription or no subscription version in the
    NPAC; otherwise an action failure will be returned.

```

The new service provider must specify valid values for the following attributes:

```

subscriptionTN or a valid subscriptionVersionTN-Range
subscriptionLRN
subscriptionNewCurrentSP
subscriptionOldSP
subscriptionNewSP-DueDate
subscriptionCLASS-DPC
subscriptionCLASS-SSN
subscriptionLIDB-DPC
subscriptionLIDB-SSN
subscriptionCNAM-DPC
subscriptionCNAM-SSN
subscriptionISVM-DPC
subscriptionISVM-SSN
subscriptionLNPTtype
subscriptionPortingToOriginal-SPSwitch

```

The new service provider must specify valid values for the following attributes, when the service provider's "SOA WSMSC DPC SSN Data" indicator is TRUE, and must NOT specify these values when the indicator is set to FALSE:

```

subscriptionWSMSC-DPC
subscriptionWSMSC-SSN

```

The new service provider may specify valid values for the following attributes:

```

subscriptionEndUserLocationValue
subscriptionEndUserLocationType
subscriptionBillingId

```

subscriptionPortingToOriginal-SPSwitch can only be specified as TRUE for a TN that is currently ported and is being ported back to the original service provider. If the value of subscriptionPortingToOriginal-SPSwitch is TRUE, the LRN and GTT data should be specified as NULL. If the variable is TRUE, when the activate occurs for the subscription version, the Local

SMSs will receive a request to delete the old subscription version routing data in their networks. They will not receive any new network routing data for the subscription. Concurrence from the old service provider is required.

If the port of the subscription version is an intra-service provider port, the new service provider can use the subscriptionVersionNewSP-Create action specifying the old service provider equal to the new service provider. In this case, the old service provider create action is not required.

Postconditions: After this action has been executed, if the data specified passes validation, a pending subscription version or range of subscription versions will exist in the NPAC SMS. These validations are done as follows:

subscriptionTN or range of TNs are valid in a range open for porting by the new service provider. TN ranges must be specified where the stop TN in the range is greater than the start TN.

subscriptionLNPTtype is specified to be "LSPP" or "LISP".

subscriptionNewSP-DueDate is a future date. If not specified, the time defaults to 00:00.00.

Old and New SP are valid service providers in the NPAC SMS.

LRN data is associated with the New Service Provider.

If a pre-existing version exists, validation will be done to insure that the new service provider previously specified is the same as the executor of the action.

If the validations succeed and the subscription version does not currently exist, a new subscription version will be created with a status of pending.

If the validations succeed and a pending subscription version exists, the new service provider create information will be applied to the existing pending subscription version.

If the validations fail, a new subscription version will not be created if one does not exist. If one already existed, it will be retained.

The action success or failure and reasons for failure will be returned in the action reply.

!;

-- 12.0 LNP Old Service Provider Cancellation Acknowledge Request

```
subscriptionVersionOldSP-CancellationAcknowledge ACTION
  BEHAVIOUR
    subscriptionVersionOldSP-CancellationAcknowledgeDefinition,
    subscriptionVersionOldSP-CancellationAcknowledgeBehavior;
  MODE CONFIRMED;
  WITH INFORMATION SYNTAX LNP-ASN1.CancellationAcknowledgeAction;
  WITH REPLY SYNTAX LNP-ASN1.CancellationAcknowledgeReply;
  REGISTERED AS {LNP-OIDS.lnp-action 12};
```

subscriptionVersionOldSP-CancellationAcknowledgeDefinition BEHAVIOUR  
DEFINED AS !

The subscriptionVersionOldSP-CancellationAcknowledge action is the action that is used via the SOA to NPAC SMS interface by the old service provider to acknowledge cancellation of a subscriptionVersionNPAC with a status of cancel-pending.

!;

subscriptionVersionOldSP-CancellationAcknowledgeBehavior BEHAVIOUR  
DEFINED AS !

Preconditions: This action was issued from an lnpSubscriptions object specifying the object or objects to be acknowledged by either the subscriptionVersionId, the subscriptionTN or a range of subscriptionTNs (where the stop TN in the range is greater than the start TN) and status.

Postconditions: The service provider has acknowledged the subscription version. An error will be returned to the service provider if there is no version that can have cancellation acknowledged or if the acknowledgement fails due to the service provider not being authorized to perform the action.

The subscriptionOldSP-CancellationTimeStamps will be updated to the current time if the action is successful and the version status will be changed to cancel.

!;

-- 14.0 LNP Old Service Provider Subscription Version Create

subscriptionVersionOldSP-Create ACTION  
BEHAVIOUR  
subscriptionVersionOldSP-CreateDefinition,  
subscriptionVersionOldSP-CreateBehavior;  
MODE CONFIRMED;  
WITH INFORMATION SYNTAX LNP-ASN1.OldSP-CreateAction;  
WITH REPLY SYNTAX LNP-ASN1.OldSP-CreateReply;  
REGISTERED AS {LNP-OIDS.lnp-action 14};

subscriptionVersionOldSP-CreateDefinition BEHAVIOUR  
DEFINED AS !

The subscriptionVersionOldSP-Create action is the action that is used via the SOA to NPAC SMS interface by the old service provider to create a new subscriptionVersionNPAC.

!;

subscriptionVersionOldSP-CreateBehavior BEHAVIOUR  
DEFINED AS !

Preconditions: This action was issued from an lnpSubscriptions object. Creates can be performed provided there is only one currently active subscription or action failure will be returned.

The old service provider must specify valid values for the following attributes:

subscriptionTN or a valid subscriptionVersionTN-Range  
subscriptionNewCurrentSP  
subscriptionOldSP

subscriptionOldSP-DueDate  
 subscriptionOldSP-Authorization  
 subscriptionLNPTType

If the subscriptionOldSP-Authorization is false, the old service provider must specify a subscriptionStatusChangeCauseCode.

Postconditions: After this action has been executed if the data specified passes validation, a pending subscription version will exist in the NPAC SMS. These validations are done as follows:

subscriptionTN or range of TNs are valid in a range open for porting. TN ranges must be specified where the stop TN in the range is greater than the start TN.

subscriptionLNPTType is specified as "LSPP" or "LISP".

subscriptionOldSP-DueDate is a future date. If not specified, the time defaults to 00:00.00.

Old and New SP are valid service providers in the NPAC SMS and the new service provider is not equal to the old service provider.

If a pre-existing version exists, validation will be done to insure that the old service provider previously specified is the same as the executor of the action.

If the validations succeed and a pending subscription version does not exist, a subscription version will be created with a status of pending.

If the validations succeed and a pending subscription version exists, the old service provider create information will be applied to the existing pending subscription version.

If the validations fail, a new subscription version will not be created if one does not exist. If one already existed it will be retained and an error returned.

The action success or failure and reasons for failure will be returned in the action reply.

!;

## -- 15.0 Notification Recovery Action

```
lnpNotificationRecovery ACTION
  BEHAVIOUR
    lnpNotificationRecoveryDefinition,
    lnpNotificationRecoveryBehavior;
  MODE CONFIRMED;
  WITH INFORMATION SYNTAX LNP-ASN1.NetworkNotificationRecoveryAction;
  WITH REPLY SYNTAX LNP-ASN1.NetworkNotificationRecoveryReply;
  REGISTERED AS {LNP-OIDS.lnp-action 15};
```

```
lnpNotificationRecoveryDefinition BEHAVIOUR
  DEFINED AS !
    The lnpNotificationRecovery action is the action that can be
    used by the SOA or LSMS to recover notification information that
```

---

cannot be recovered by other means.

!;

lnpNotificationRecoveryBehavior BEHAVIOUR

DEFINED AS !

Preconditions: This action is issued from an lnpNPAC-SMS object from a SOA or LSMS that specified the recovery mode flag in the access control as true at association establishment.

Postconditions: After this action has been executed by the SOA or LSMS specifying recovery, the NPAC SMS will forward the notifications that occurred in the time range specified for the requesting system (SOA or LSMS) for the primary or associated SPID specified in the access control. Notifications are forwarded in the action reply.

Notifications to be recovered are requested by time range. Time range requests will be limited to a tunable range specified in the NPAC SMS. All data in the download time period, regardless of the amount of data, will be returned.

The recovery of the SOA and LSMS notifications are independent requests. Notifications can be recovered until they are purged from the database. The tunable used to determine when to purge the notifications is "Notify Log Retention Period" which defaults to 90 days.

For all download requests, the Local SMS or SOA should behave as follows in response to the possible download M-ACTION response from the NPAC SMS:

Success - process the data received from the NPAC SMS, continue processing.

No-data-selected -- no data was found, continue processing.

Criteria-too-large (using the MaxNotificationRecovery tunable) - break up the request into a smaller time range and re-issue the request to the NPAC SMS.

Time-range-invalid (using the Maximum Download Duration tunable) - break up the request into shorter time ranges and re-issue the request to the NPAC SMS.

Failed - go into retry mode. Re-issue the request a configurable number of additional retry attempts with an "x" amount of delay between requests ("x" is a configurable amount of time after receiving the failure for each request). If a failed response is received for the final retry request, abort the association and re-start the recovery process. Note: It is recommended that the Local SMS or SOA use the same value that the NPAC SMS uses for the retry interval. It is also recommended that the Local

SMS

use a value of at least two (2) for configurable number of additional retry attempts.

For activities that specify "continue processing", the Local SMS or SOA should send the NPAC SMS, either the next lnpDownload action for a different type of data, or an lnpRecoveryComplete request, depending on where the response appears in the flow.

The SOA or LSMS is capable of recovering data based on the association functions. The SOA recovers network data using the data download association function (dataDownload). The SOA recovers notification data using the network data management association function (networkDataMgmt). The LSMS recovers network data and subscription data using the data download association function (dataDownload) and recovers notification data using the network data management association function (networkDataMgmt).

```
!;
```

```
-- 16.0 LNP Service Provider Number Pool Block Create
```

```
numberPoolBlock-Create ACTION
  BEHAVIOUR
    numberPoolBlock-CreateDefinition,
    numberPoolBlock-CreateBehavior;
  MODE CONFIRMED;
  WITH INFORMATION SYNTAX LNP-ASN1.NumberPoolBlock-CreateAction;
  WITH REPLY SYNTAX LNP-ASN1.NumberPoolBlock-CreateReply;
  REGISTERED AS {LNP-OIDS.lnp-action 16};
```

```
numberPoolBlock-CreateDefinition BEHAVIOUR
  DEFINED AS !
    The numberPoolBlock-Create action is the action that is
    used on the NPAC SMS via the SOA to NPAC SMS interface by the
    block holder SOA to create a new numberPoolBlockNPAC.
  !;
```

```
numberPoolBlock-CreateBehavior BEHAVIOUR
  DEFINED AS !
    Preconditions: This action is issued from an lnpSubscriptions
    object.

    The service provider block holder must specify valid values for the
    following attributes:
```

```
numberPoolBlockNPA-NXX-X
numberPoolBlockHolderSPID
numberPoolBlockLRN
numberPoolBlockCLASS-DPC
numberPoolBlockCLASS-SSN
numberPoolBlockLIDB-DPC
numberPoolBlockLIDB-SSN
numberPoolBlockCNAM-DPC
numberPoolBlockCNAM-SSN
numberPoolBlockISVM-DPC
numberPoolBlockISVM-SSN
```

If the SOA WSMSC DPC SSN Data Indicator is set in the service provider's profile, the following attributes must be provided:

```
numberPoolBlockWSMSC-DPC
numberPoolBlockWSMSC-SSN
```

Postconditions: After this action has been executed, if

---

the data specified passes validation, a number pool block with a status of 'sending' will exist on the NPAC SMS.

The validations performed are as follows:

The serviceProvNPA-NXX-X object exists and the current date and time are greater than or equal to the effective date of the serviceProvNPA-NXX-X object.

The requesting service provider is the block holder and service provider ID on the serviceProvNPA-NXX-X object.

LRN data is associated with the Block Holder Service Provider.

The attributes are all valid and correctly formatted.

If the validations succeed, a new number pool block and corresponding subscription versions will be created with a status of 'sending'. The NPAC SMS sends the object creation notification for the number pool block.

If the validations fail, no new number pool block or subscription versions will be created. If a number pool block already existed, it will be retained.

The action success or failure and reasons for failure will be returned in the action reply.

If the requesting SOA is not the owner of the serviceProvNPA-NXX-X, 'soa-not-authorized' will be selected in the error reply.

If the corresponding serviceProvNPA-NXX-X is not found, 'no-npa-nxx-x-found' will be selected in the error reply.

If one of the attribute values is in error, 'invalid-data-values' will be selected in the error reply and the block-invalid-values will be present.

If the number pool block object already exists, 'number-pool-block-already-exists' will be selected in the error reply.

If the request is sent prior to the effective date, 'prior-to-effective-date' will be selected in the error reply.

If the request is sent and any subscription version objects exist within the TN range with a status of pending, conflict, cancel-pending or failed ("pending-like") and no active subscription version for that TN exists, 'invalid-subscription-versions' will be selected in the error reply.

```

```

subscriptionAudit-DiscrepancyRptBehavior BEHAVIOUR
DEFINED AS !
    This notification contains a report on a discrepancy found during
    an audit. The discrepancy contains the subscription TN and Version
    ID for which the discrepancy was found and the error. Valid
    errors are:

```

```

    audited subscription version fields mismatched between NPAC SMS
    and Local SMS; records missing in Local SMS; extra subscription
    versions on the Local SMS.

```

```

    If field mismatches are found, the attribute(s) for which the
    mismatch, the Local SMS value(s), and the NPAC SMS value(s)
    will be returned as well as the Service Provider Id associated
    with the Local SMS.

```

```

    When audit discrepancy notifications are sent by the NPAC SMS,
    the Local SMS create, modification, or deletion requests to correct
    the discrepancy will be done by the NPAC SMS.

    access-control accessControl;
REGISTERED AS {LNP-OIDS.lnp-notification 3};

```

```

subscriptionAuditResultsBehavior BEHAVIOUR
DEFINED AS !

```

This notification contains the results of an audit. It contains the name of the audit, the number of discrepancies found during the audit, the success or failure of the audit, and the time of audit completion or failure.

The audit status will be returned with the following priority on the return values:

```

    Highest - failed due to discrepancies
    High - failed on Local SMS
    Low - no audit performed
    Lowest - success

```

A higher priority status condition will override a lower. For example, any error will override a 'no audit performed', and 'failed due to discrepancies' will override all other status conditions.

access-control accessControl;  
REGISTERED AS {LNP-OIDS.lnp-notification 13};
```

```
numberPoolBlockStatusAttributeValueChangeBehavior BEHAVIOUR  
DEFINED AS !
```

This notification is used to report changes to the numberPoolBlockStatus field. It is identical to an attribute value change notification as defined in M.3100 except for the addition of the list of failed service providers.

The failed service provider list reflects the EDR service providers who failed to receive the number pool block and any non-EDR service provider who failed to receive the corresponding subscription versions of LNP type equal to 'pool'.

Failed lists will be potentially sent for number pool blocks with statuses of active, failed, partial failure and old. This notification will be sent to the SOAs when the numberPoolBlockSOA-Origination is true for the number pool block object.

## 7 General ASN.1 Definitions

### 7.1 Overview

The ASN.1 definitions (asn1\_v3\_0\_2\_041700) provided below support the GDMO definitions in Section 6. Included below are the ASN.1 object identifier definitions and the syntax definitions for the interface attributes, notifications, and actions.

Note: The exact lengths must be specified for ASN.1 data send across the interface. This will prevent trailing null characters that may not be accepted by some CMIP vendor products.

### 7.2 LNP ASN.1 Object Identifier Definitions

```
--#include    "smi.asn"

LNP-OIDS
  {iso(1) org(3) dod(6) internet(1) private(4) enterprises(1)
   lockheedMartin(103) cis(7) npac(0) iis(0) oids(0)}

DEFINITIONS ::=

# 8 Subscription Version Status

Subscription Version Status Interaction Descriptions			
#	Interaction Name	Type	Description
	Conflict to Canceled	NPAC SMS Internal	NPAC SMS automatically sets a Subscription Version in conflict directly to canceled after it has been in conflict for a tunable number of calendar days.
		SOA to NPAC SMS Interface or NPAC Operations Interface - NPAC Personnel	The old Service Provider User (or NPAC personnel acting on behalf of the Service Provider) sends a cancellation request for a Subscription Version created by that Service Provider with a status of conflict that has not been concurred by the other new Service Provider.
	Conflict to Cancel Pending	NPAC Operations Interface - NPAC Personnel	User cancels a Subscription Version in conflict or cancels a Subscription Version that was created by or concurred to by both Service Providers.
		SOA to NPAC SMS	User sends a cancellation request for a Subscription Version

Subscription Version Status Interaction Descriptions			
#	Interaction Name	Type	Description
		Interface	
	Cancel Pending to Conflict	NPAC Operations Interface - NPAC Personnel	User sets a Subscription Version with a status of cancel pending to conflict.
		NPAC SMS Internal	NPAC SMS automatically sets a Subscription Version with a status of cancel pending to conflict if cancel pending acknowledgment has not been received from the new Service Provider within a tunable timeframe.
	Conflict to Pending	NPAC Operations Interface - NPAC Personnel and SOA to NPAC SMS Interface - Old Service Provider	User removes a Subscription Version from conflict.
		SOA to NPAC SMS Interface - New Service Provider	New Service Provider User removes a Subscription Version from conflict. This action can only occur if a tunable number of hours have elapsed since the Subscription Version was placed in conflict.
	Pending to Conflict	NPAC Operations Interface - NPAC Personnel	1. User sets a Subscription Version with a status of pending to conflict. 2. User creates a Subscription Version for an existing pending Subscription Version for the old Service Provider and does not provide authorization for the transfer of service.
		SOA to NPAC SMS Interface - Old Service Provider	Old Service Provider sends a Subscription Version creation or modification request for a Subscription Version with a status of pending, which revokes the old Service Provider's authorization for transfer of service. This action can only be taken once, and must be taken a tunable number of hours prior to the new Service Provider due date.
	Pending to Canceled	NPAC Operations Interface - NPAC Personnel	User cancels a Subscription Version with a status of pending that has not been concurred by both service providers.
		SOA to NPAC SMS Interface	Service Provider User sends a cancellation request for a Subscription Version created by that Service Provider with a status of pending that has not been concurred by the other Service Provider.
		NPAC SMS Internal	1. NPAC SMS automatically sets a pending Subscription Version to canceled after authorization for the transfer of service has not been received from the new Service Provider within a tunable timeframe. 2. NPAC SMS automatically sets a pending Subscription Version to canceled if an activation request is not received a tunable amount of time after new Service Provider due date.
	Pending to Cancel Pending	NPAC Operations Interface - NPAC Personnel	User cancels a Subscription Version with a status of pending that has been created/concurred by both Service Providers.
		SOA to NPAC SMS Interface	Service Provider User sends a cancellation request for a Subscription Version with a status of pending that has been concurred by the other Service Provider.
	Cancel Pending to Canceled	NPAC SMS Internal	NPAC SMS automatically sets a cancel pending Subscription Version to canceled after receiving cancel pending acknowledgment from the concurring Service Provider, or the final cancellation concurrence window has expired without cancel concurrence from the old Service Provider.
	Creation - Set to Conflict	NPAC Operations Interface - NPAC Personnel	User creates a Subscription Version for the old Service Provider and does not provide authorization for the transfer of service.

## Subscription Version Status Interaction Descriptions

#	Interaction Name	Type	Description
		SOA to NPAC SMS Interface - Old Service Provider	User sends an old Service Provider Subscription Version creation request and does not provide authorization for the transfer of service.
10	Creation - Set to Pending	NPAC Operations Interface - NPAC Personnel	User creates a Subscription Version for either the new or old Service Provider. If the create is for the old Service Provider and authorization for the transfer of service is not provided, refer to # 9, <i>Creation - Set to Conflict, NPAC Operations Interface</i> .
		SOA to NPAC SMS Interface	User sends a Subscription Version creation request for either the new or old Service Provider. If the create is for the old Service Provider, and authorization for the transfer of service is not provided, refer to # 9, <i>Creation - Set to Conflict, SOA to NPAC SMS Interface</i> .
11	Disconnect Pending to Sending	NPAC SMS Internal	NPAC SMS automatically sets a deferred disconnect pending Subscription Version to sending after the effective release date is reached.
13	Pending to Sending	NPAC Operations Interface - NPAC Personnel	User activates a pending Subscription Version for a Subscription Version with a new Service Provider due date less than or equal to today.
		SOA to NPAC SMS Interface - New Service Provider	New Service Provider User sends an activation message for a pending Subscription Version for a Subscription Version with a new Service Provider due date less than or equal to today.
14	Sending to Failed	NPAC SMS Internal	NPAC SMS automatically sets a Subscription Version from sending to failed after all Local SMSs fail Subscription Version activation after the tunable retry period expires.
15	Failed to Sending	NPAC Operations Interface - NPAC Personnel	User re-sends a failed Subscription Version.
16	Partially Failed to Sending	NPAC Operations Interface - NPAC Personnel	User re-sends a partial failure Subscription Version.
17	Sending to Partially Failed	NPAC SMS Internal	NPAC SMS automatically sets a Subscription Version from sending to partial failure after one or more, but not all, of the Local SMSs fail the Subscription Version activation after the tunable retry period expires.
18	Sending to Old	NPAC SMS Internal	NPAC SMS automatically sets a sending Subscription Version to old after a disconnect or "porting to original" port to all Local SMSs successfully completes. Disconnects that fail on one or more, but not all, Local SMSs will also be set to old.
19	Sending to Active	NPAC SMS Internal	<ol style="list-style-type: none"> <li>1. NPAC SMS automatically sets a sending Subscription Version to active after the Subscription Version activation is successful in all of the Local SMSs.</li> <li>2. NPAC SMS automatically sets a sending Subscription Version to active after the Subscription Version modification is successfully broadcast to any of the Local SMSs after all have responded.</li> <li>3. NPAC SMS automatically sets a sending Subscription Version to active after a failure to all Local SMSs on a disconnect.</li> </ol>
20	Active to Sending	NPAC Operations Interface - NPAC Personnel	User disconnects an active Subscription Version and does not supply an effective release date, or User modifies an active Subscription Version or resends a failed disconnect or modify.
		SOA to NPAC SMS Interface - Current Service Provider	User sends a disconnect request for an active Subscription Version and does not supply an effective release date, or User modifies an active Subscription Version.
21	Active to Old	NPAC SMS Internal	NPAC SMS automatically sets the currently active Subscription Version to old once a currently active

## Subscription Version Status Interaction Descriptions

#	Interaction Name	Type	Description
			subscription version is superceded by a pending subscription version, due to the fact that the current version is set to old when an activate occurs. The new pending version is set to sending and then to active, partially failed, or old. On a disconnect the sending state occurs before the old.
22	Disconnect Pending to Active	NPAC Operations Interface - NPAC Personnel	User cancels a Subscription Version with a disconnect pending status.
		SOA to NPAC SMS Interface - New Service Provider	User sends a cancellation request for a disconnect pending Subscription Version.
23	Active to Disconnect Pending	NPAC Operations Interface - NPAC Personnel	User disconnects an active Subscription Version and supplies a future effective release date.
		SOA to NPAC SMS Interface - Current Service Provider	User sends a disconnect request for an active Subscription Version and supplies a future effective release date.
24	Old to Sending	NPA Operations Interface – NPAC Personnel	User re-sends a partial failure of a disconnect or partial failure or failure of a port-to-original Subscription Version.
25	Old to Old	NPAC SMS Internal	NPAC SMS automatically sets a Subscription Version from old to old after one or more previously failed Local SMSs successfully disconnect a Subscription Version, as a result of an audit or LSMS recovery. The Failed_SP_List is updated to reflect the updates to the previously failed SPs.
26	Partially Failed to Active	NPAC SMS Internal	NPAC SMS automatically sets a Subscription Version from partial failure to active after all previously failed Local SMSs successfully activate a Subscription Version, as a result of an audit or LSMS recovery. The Failed_SP_List is updated to reflect the updates to the previously failed SPs.
27	Partially Failed to Partially Failed	NPAC SMS Internal	NPAC SMS automatically sets a Subscription Version from partial failure to partial failure after one or more, but not all previously failed Local SMSs successfully activate a Subscription Version, as a result of an audit or LSMS recovery. The Failed_SP_List is updated to reflect the updates to the previously failed SPs.

# 9

## 9 Number Pool Block Status

In the following table, the reference to “Number Pool Block” data when broadcasting to an LSMS is based on that

Service Provider’s EDR Indicator (i.e., Number Pool Block object or Subscription Versions with LNP Type of POOL).

Number Pool Block Version Status Interaction Descriptions			
#	Interaction Name	Type	Description
	Creation - Set to Sending	NPAC SMS Internal	NPAC SMS creates a Number Pool Block for the Block Holder Service Provider.
		NPAC Operations Interface - NPAC Personnel	User sends a Number Pool Block creation request for the Block Holder Service Provider.
		SOA to NPAC SMS Interface - Block Holder Service Provider	The Service Provider User sends a Number Pool Block creation request for itself (the Block Holder Service Provider).
	Sending to Partial Failure	NPAC SMS Internal	NPAC SMS automatically sets a Number Pool Block from sending to partial failure after one or more, but not all, of the Local SMSs fail the Number Pool Block activation after the tunable retry period expires.
	Partial Failure to Sending	NPAC Operations Interface - NPAC Personnel	User re-sends a partial failure Number Pool Block.
	Sending to	NPAC SMS Internal	NPAC SMS automatically sets a Number Pool Block from

<b>Number Pool Block Version Status Interaction Descriptions</b>			
<b>#</b>	<b>Interaction Name</b>	<b>Type</b>	<b>Description</b>
	Failed		sending to failed after all Local SMSs fail Number Pool Block activation after the tunable retry period expires.
	Failed to Sending	NPAC Operations Interface - NPAC Personnel	User re-sends a failed Number Pool Block.
	Sending to Active	NPAC SMS Internal	<ol style="list-style-type: none"> <li>1. NPAC SMS automatically sets a sending Number Pool Block to active after the Number Pool Block activation is successful in all of the Local SMSs.</li> <li>2. NPAC SMS automatically sets a sending Number Pool Block to active after the Number Pool Block modification is broadcast to all of the Local SMSs and either all have responded or retries have been exhausted.</li> <li>3. NPAC SMS automatically sets a sending Number Pool Block to active after a failure to all Local SMSs on a de-pool.</li> </ol>
	Active to Sending	NPAC Operations Interface - NPAC Personnel	<ol style="list-style-type: none"> <li>1. User de-pools an active Number Pool Block.</li> <li>2. User modifies an active Number Pool Block.</li> <li>3. User resends a failed de-pool or modify Number Pool Block.</li> </ol>
		SOA to NPAC SMS Interface - Block Holder Service Provider	User modifies an active Number Pool Block.
	Sending to Old	NPAC SMS Internal	<ol style="list-style-type: none"> <li>1. NPAC SMS automatically sets a sending Number Pool Block to old after a de-pool to all Local SMSs successfully completes.</li> <li>2. NPAC SMS automatically sets a sending Number Pool Block to old after a de-pool that fails on one or more, but not all Local SMSs.</li> </ol>
	Old to Sending	NPA Operations Interface – NPAC Personnel	User re-sends a partial failure of a de-pool.
10	Partial Failure to Partial Failure	NPAC SMS Internal	NPAC SMS automatically sets a Number Pool Block from partial failure to partial failure after one or more, but not all previously failed Local SMSs successfully activate a Number Pool Block, as a result of an audit or LSMS recovery. The Failed_SP_List is updated to reflect the updates to the previously failed SPs.
11	Partial Failure to Active	NPAC SMS Internal	NPAC SMS automatically sets a Number Pool Block from partial failure to active after all previously failed Local SMSs successfully activate a Number Pool Block, as a result of an audit or LSMS recovery. The Failed_SP_List is updated to reflect the updates to the previously failed SPs.
12	Old to Old	NPAC SMS Internal	NPAC SMS automatically sets a Number Pool Block from old to old after one or more previously failed Local SMSs successfully de-pools a Number Pool Block, as a result of an audit or LSMS recovery. The Failed_SP_List is updated to reflect the updates to the previously failed SPs.
