### App-to-App (SOA to NPAC SMS)

There do not currently exist range versions for the following scenarios. These will be added as conditional test cases to be executed if the vendor supports the range operation and added to the regression checklist.

- A2A.NSOA.VAL.ACTIVATE.TN-RANGE.SubscriptionVersion
- A2A.SOA.VAL.MODIFY.PEND.TN-RANGE.SubscriptionVersion
- A2A.NSOA.VAL.CONFLICT.RESOLVE.TN-RANGE.SubscriptionVersion

### Updates:

- MOC.SOA.CAP.ACT.InpNotificationRecovery - Require notifications in the "list" and "range" versions, if recovering the "Range" notification type.
- App-to-App: Need to update all test cases that use any of the above "original" notifications with text to indicate that the appropriate notification type should be sent (either Range or Original).
- MOC: Need to update the Severity and Severity Explanation on existing notification test cases that now have "range" versions to indicate the test case is conditional on whether the vendor is supporting the "original" version of the notification.

- Checklists: Update the checklists to allow vendors to execute the Original, Range or both versions of the notifications.
