Unique Sets of Timers  
\par  
\par }{\f1\fs22 Wireless to wireless porting needs tunable values/timers  
defined that are independent from wire line tunable values/timers by region. It  
was discussed that to support the wireless need in a generic manner that a  
unique set of tunable timers be defined.}{  
\par  
\par }{\f1\fs22 Two approaches were discussed:

\par

\par }{\b\fs22 The NANC T&O Group selected SOLUTION 2.}\fs22

\par

\par }{\fs22\ul Solution 1}\fs22 - Maximum Flexibility for Unique Timer Set Support

\par

\par } \pard \plain \s28 \nowidctlpar \widctlpar \adjustright \fs22 \cgrid {In this option the service provider would specify the timers to be used on each subscription version port request.

\par } \pard \plain \nowidctlpar \widctlpar \adjustright \fs20 \cgrid {\fs22

\par Cons:

\par

\par } \pard \li720 \nowidctlpar \widctlpar \adjustright {\fs22 Nothing to prevent a Service Provider from using shortened timers inappropriately. If short timers are used inappropriately the port could occur before the other Service Provider has an opportunity to stop it. This could result in customer service issues for call completion/service.

\par

\par A proposed solution is to force Service Provider concurrence.

\par } \pard \nowidctlpar \widctlpar \adjustright {\fs22

\par Pro:

\par

\par } \pard \plain \s23 \li720 \nowidctlpar \widctlpar \adjustright \fs20 \cgrid {\fs22 Maximum Flexibility for selecting timers to be used on a subscription version port.

\par } \pard \plain \nowidctlpar \widctlpar \adjustright \fs20 \cgrid {\fs22

\par }{\fs22\ul Solution 2}\fs22 \endash Service Provider ID Associated with Timer Type

\par

\par A service provider profile would specify the set of timers the NPAC SMS would use for subscription version porting (in and out) for this service provider.

\par

\par Con:

\par

\par } \pard \plain \s23 \li720 \nowidctlpar \widctlpar \adjustright \fs20 \cgrid {\fs22 This approach limits service provider flexibility. One Service Provider can only use one set of timers for porting in and porting out.

\par

\par }\pard\plain \s23\nowidctlpar\widctlpar\adjustright \fs20\cgrid {\b\f1\fs22 NOTE:}\f1\fs22 Support of two additional timer types, medium 1 and medium 2 was discussed to potentially support wire line to wireless and wireless to wire line porting. The requirements developed do not include these two timer types due to the fact that the values or these timer sets are not yet defined. The requirements developed do not preclude inclusion of the additional timer types.

\par

\par Service providers can specify in their profile as defined below the timers to be used for porting in when they are the new service provider or porting out were they are the old service provider. Due to this fact the NPAC will have to use the longer timer of the timers supported by the service provider. (Another option discussed was to reject the message if the timers supported did not

match.) This selection of the longer timers by the NPAC SMS may result in longer timers being used when a service provider expects short timers to be used.

\par

\par \page The following table illustrates the outcome of timers to be used based on the combinations possible.

 \par  
 \par subscriptionVersionNPAC-Behavior BEHAVIOUR  
 \par DEFINED AS ! { \f2 \fs18 \revised \revauth1 \revdtm1 177064011 \cgrid0  
 \par NPAC SMS Managed Object for the SOA to NPAC SMS and the Local SMS  
 \par to NPAC SMS interface.  
 \par  
 \par A Local SMS can M-GET any subscriptionVersionNPAC objects  
 \par from the NPAC SMS via the Local SMS Interface (Data Download  
 \par Association Function).  
 \par  
 \par A Service Provider SOA can M-GET any subscriptionVersionNPAC  
 \par objects from the NPAC SMS via the SOA Interface (SOA Management  
 \par Association Function).  
 \par  
 \par If a Service Provider SOA or Local SMS does a scoped filtered  
 \par M-GET for subscription versions, this request will only be  
 \par successful if a the number of records to be returned is less  
 \par than or equal to the NPAC SMS tunable parameter,  
 \par "Max Subscriber Query", in the Service Data table.

\par

\par When the status of an object is changed to "cancel-pending",  
\par subscriptionPreCancellationStatus is first set to the current status.

\par

\par The subscriptionCreationTimeStamp is set to the current system  
\par time when the object is created.

\par

\par When the subscription version is modified for any reason, the  
\par subscriptionModifiedTimeStamp is updated with the current system  
time.

\par

\par When the subscription version is broadcast to Local SMSs via  
\par the NPAC to Local SMS interface, the

subscriptionBroadcastTimeStamp

\par is updated with the current system time.

\par

\par When the subscription version has its version status set to old,  
\par the subscriptionOldTimeStamp is updated with the current system  
time.

\par

\par When the subscription version has its version status set to cancel,  
\par the subscriptionCancellationTimeStamp is updated with the  
current system time.

\par

\par When the subscription version has its version status set to  
\par conflict, the subscriptionConflictTimeStamp is updated with the  
current system time.

\par

\par When the subscription version is disconnected and the version  
\par status is set to old, the subscriptionDisconnectCompleteTimeStamp  
is updated with the current system time.

\par

\par When the subscription version status is set to disconnect pending  
\par the subscriptionEffectiveReleaseDate is set to the date the  
disconnect should be broadcast.

\par

\par When the subscription version in a cancel-pending  
\par state is acknowledged by an old service provider SOA, the  
\par subscriptionOldSP-CancellationTimeStamp is updated with the  
current system time.

\par

\par  
 \par When the subscription version in a cancel-pending  
 \par state is acknowledged by a new service provider SOA, the  
 \par subscriptionNewSP-CancellationTimeStamp is updated with the  
 \par current system time.  
 \par  
 \par When the subscription version in a conflict state is removed  
 \par from conflict by the old service provider SOA, the  
 \par subscriptionOldSP-ConflictResolutionTimeStamp is updated with the  
 \par current system time.  
 \par  
 \par When the subscription version in a conflict state is removed  
 \par from conflict by the new service provider SOA, the  
 \par subscriptionNewSP-ConflictResolutionTimeStamp is updated with  
 \par the current system time.  
 \par  
 \par When the subscription version status is failed or partially-failed,  
 \par the subscriptionFailed-SP-List is populated with a list of the  
 \par failed service providers.}

 {\f2\fs18\revised\revauth1\revdtm1177064011\cgrid0

\par The Service Provider SOA can M-GET and M-SET  
subscriptionVersionNPAC  
\par objects via the SOA to NPAC SMS interface (SOA Management  
Association  
\par Function). Rules for M-SET are described below.  
\par  
\par For M-GET requests, the filter will support all attributes for  
\par a specified ported TN.  
\par  
\par Any service provider SOA can view any subscription version for any  
\par ported TN (SOA Management Association Function).  
\par  
\par Subscription versions are created on the NPAC SMS via actions over  
\par the SOA to NPAC SMS interface to the InpSubscriptions object (SOA  
\par Management Association Function). New service provider SOAs must  
use  
\par the subscriptionVersionNewSP-Create action and old service  
\par provider SOAs must use the subscriptionVersionOldSP-Create action.  
\par Creates can only be performed provided there is only one  
\par currently active subscription version for the TN.  
\par  
\par subscriptionPortingToOriginal-SPSwitch can only be specified as  
\par TRUE for a TN that is currently ported and is being ported back  
\par to the original service provider. If the value of  
\par subscriptionPortingToOriginal-SPSwitch is TRUE, the LRN and GTT  
data  
\par should not be specified. This data is not specified because  
\par when the activate occurs for the subscription version, the Local  
\par SMS will receive requests to delete the old subscription version  
\par routing data in their networks and they will not receive any  
\par new network routing data for the subscription. Concurrence from the  
\par old service provider is required.  
\par  
\par If the port of the subscription version is an intra-service  
\par provider port, the new service provider SOA can use the  
\par subscriptionVersionNewSP-Create action specifying the old service  
\par provider equal to the new service provider. In this case, the  
\par old service provider create action is not required and processing  
\par proceeds after a valid pending version is created in the same  
\par manner as it does for inter-service provider porting.

\par

\par Once a version has been created that passes validation, the  
\par subscriptionVersionNPAC object subscriptionVersionStatus will  
\par be set to pending and an object creation notification will be sent  
\par to both old and new service provider SOAs. If a version  
\par previously existed, attribute value change notifications will be  
\par sent to both old and new service provider SOAs.

\par

\par If there is a pending version that does not have concurrence during  
\par the "Service Provider Concurrence Window" specified in the Service  
\par Data table, a subscriptionVersionNoConcurrence notification will be  
\par sent to the service provider SOA that has not responded. The  
\par subscriptionVersionStatus will be set to cancel-pending if the new  
\par service provider SOA has not responded or to conflict if the old  
\par service provider SOA has not responded after the "Service Provider  
\par Concurrence Failure Window" specified in the Service Data table.  
\par An attribute value change will be sent to the service provider  
\par SOA that sent the original create request.

\par

\par The Service Provider SOA can M-SET attributes associated with  
\par pending, or conflict subscription versions (SOA Management  
Association

\par Function).

\par

\par Attempts to modify an active, sending, failed, canceled, cancel-  
pending,

\par disconnect-pending or old version using M-SET will result in  
\par an access denied error.

\par

\par Modification of an active subscription can only be done by the  
\par current/new service provider SOA using the  
subscriptionVersionModify

\par action.

\par

\par The modify action can be used by both old and new service  
\par provider SOAs to update pending or conflict subscription versions.

\par

\par Old service provider SOAs can only modify the following attributes:

\par

\par subscriptionOldSP-DueDate

\par subscriptionOldSP-Authorization  
\par subscriptionStatusChangeCauseCode

\par

\par New service provider SOAs can only modify the following attributes:

\par

\par subscriptionLRN  
\par subscriptionNewSP-DueDate

\par subscriptionCLASS-DPC

\par subscriptionCLASS-SSN

\par subscriptionLIDB-DPC

\par subscriptionLIDB-SSN

\par subscriptionCNAM-DPC

\par subscriptionCNAM-SSN

\par subscriptionISVM-DPC

\par subscriptionISVM-SSN

\par subscriptionEndUserLocationValue

\par subscriptionEndUserLocationType

\par subscriptionBillingId

\par

\par The subscriptionOldSP-DueDate and subscriptionVewSP-DueDate  
must

\par match. Validation will be done for both old and new service  
\par provider data that is specified on an M-SET. If validation fails,  
\par no changes will be made and a processing failure will be returned.  
\par If the version passes validation, the version status will be  
\par set to pending. An error message will be returned to the service  
\par provider if the status is not pending when they attempt to change  
\par the version status to cancel-pending.

\par

\par Once a pending version has been created, the new service provider  
\par can activate the subscription version if authorization for the port  
\par has been received by the old service provider within  
\par the "Service Provider Concurrence Cancellation Window".

\par

\par Once the version is activated, the version status is set to  
\par sending, the broadcast time stamp is updated, and creates  
\par are sent to the Local SMSs.

\par

\par If the create requests are successful for all Local SMSs, the  
\par version status will be marked as active and the previously active

\par subscription version will have its version status set to old.

\par

\par If create requests fail for a subscription version after the  
\par retry periods have expired, the version status will be set  
\par to failed or partially-failed based on if the download failed  
\par in all or some of the Local SMSs respectively.

\par

\par A status version attribute value change will be sent to both old  
\par and new service providers when the subscriptionVersionStatus is  
\par modified. If the version status is failed or partially-failed then  
\par a list of failed service providers is provided in the  
\par subscriptionVersionStatus notification.

\par

\par A subscription version can be put into conflict by either the NPAC  
\par SMS or by the old service provider explicitly setting the  
\par subscriptionOldSP-Authorization off or by not responding with the  
\par subscriptionVersionOldSP-Create action.

\par

\par If the old service provider explicitly sets the  
\par subscriptionOldSP-Authorization off, the  
\par subscriptionStatusChangeCauseCode must be given.

\par

\par The old service provider can only put a subscription version into  
\par conflict once and only by explicitly setting the  
\par subscriptionOldSP-Authorization off.

\par

\par A service provider should acknowledge the conflict resolution pending  
\par state within a tunable time frame specified on the NPAC SMS  
\par with a conflict resolution acknowledgement action.

\par

\par A service provider should acknowledge the cancel pending  
\par state within a tunable time frame specified on the NPAC SMS  
\par with a cancel acknowledgement action.

\par

\par If a service provider SOA fails to acknowledge the cancel pending  
\par state, a subscriptionVersionCancellationAcknowledgeRequest is  
\par sent to the service provider SOA. If they do not respond to this  
\par acknowledgement in a tunable time frame specified on the NPAC

SMS,

\par the version status will be set to conflict.

\par  
\par Attribute value change notifications will be sent to both service  
\par provider SOAs when the following attribute values change for  
\par a pending, cancel-pending, conflict or disconnect-pending  
subscription

\par versions:

\par

\par subscriptionNewSP-DueDate

\par subscriptionNewSP-CreationTimeStamp

\par subscriptionOldSP-DueDate

\par subscriptionOldSP-Authorization

\par subscriptionOldSP-AuthorizationTimeStamp

\par subscriptionStatusChangeCauseCode

\par subscriptionVersionStatus

\par

\par Object creation notifications will be sent to both old and

\par new service provider SOAs when a subscriptionVersionNPAC

associated

\par with their Service Provider id is created. Object deletion

\par notifications will not be used. Objects will only be deleted by the

\par NPAC SMS as a result of housekeeping processing.

\par

\par Prior to when the subscription version status is set to disconnect

\par pending or old, the subscriptionVersionDonorSP-

CustomerDisconnectDate

\par is sent to the donor SOA informing the service provider of the

\par actual customer disconnect date.}

\par Two approaches were discussed:

\par

\par }{\b\f1\fs22 The NANC T&O Group selected SOLUTION 2.

\par }{\f1\fs22

\par }{\f1\fs22\ul Solution 1}{\f1\fs22 - Maximum Flexibility for Unique  
Business Days/Hours Support

\par

\par }\pard\plain \s28\nowidctlpar\widctlpar\adjustright \f1\fs22\cgrid {In  
this option the service provider would specify the business days/hours to be  
used on each subscription version port request.

\par }\pard\plain \nowidctlpar\widctlpar\adjustright \fs20\cgrid {\f1\fs22

\par Cons:

\par

\par }\pard\plain \s23\li720\nowidctlpar\widctlpar\adjustright \fs20\cgrid  
{\f1\fs22 Nothing to prevent a Service Provider from using longer business  
days/hours inappropriately. If long timers are used inappropriately the port  
could occur before the other Service Provider has an opportunity to stop it.

This could result in customer service issues for call completion/service.

A proposed solution is to force Service Provider concurrence.

Pro:

**Maximum Flexibility for selecting business days/hours to be used on a subscription version port.**

**Solution 2** – Service Provider ID

Associated with Business Days/Hours Type

A service provider profile would specify the business days/hours the NPAC SMS would use for subscription version porting for this service provider.

Con:

**This approach limits service provider flexibility. One Service Provider can only use one set of business days/hours.**

Pro:

**This approach prevents use of inappropriate business days/hours without changes to the business process flows or the NPAC SMS interface.**

**FRS Modifications**

**1. The following requirements would need to be updated to add the business hours/days type:**

Requirements would need to be added/modified for the new business hours/days types:

10\ Business Hours and Days

NPAC SMS shall support definition and processing of long and short business hours and days for operations involving business time calculation.

11.1\ Business Day Definition -Short

NPAC SMS short business days shall be Monday through Friday excluding NPAC operations-defined holidays.

11.2\ Business Day Definition -Long

NPAC SMS long business days shall be Monday through Saturday excluding NPAC operations-defined holidays.

12.1\ Business Day Duration - Tunable Parameter

NPAC SMS shall provide a short and long Business Day Duration tunable parameter, which is defined as the number of hours from the tunable business day start time.

\par ;  
\par  
\par subscriptionVersionNPAC-Definition BEHAVIOUR  
\par DEFINED AS !  
\par The subscriptionVersionNPAC class is the managed object  
\par that represents a subscription version on the NPAC SMS.  
\par !;  
\par  
\par subscriptionVersionNPAC-Behavior BEHAVIOUR  
\par DEFINED AS !  
\par NPAC SMS Managed Object for the SOA to NPAC SMS and the Local SMS  
\par to NPAC SMS interface.  
\par  
\par A Local SMS can M-GET any subscriptionVersionNPAC objects  
\par from the NPAC SMS via the Local SMS Interface (Data Download  
\par Association Function).  
\par  
\par A Service Provider SOA can M-GET any subscriptionVersionNPAC  
\par objects from the NPAC SMS via the SOA Interface (SOA Management  
\par Association Function).  
\par  
\par If a Service Provider SOA or Local SMS does a scoped filtered  
\par M-GET for subscription versions, this request will only be  
\par successful if a the number of records to be returned is less  
\par than or equal to the NPAC SMS tunable parameter,  
\par "Max Subscriber Query", in the Service Data table.  
\par  
\par When the status of an object is changed to "cancel-pending",  
\par subscriptionPreCancellationStatus is first set to the current status.  
\par  
\par The subscriptionCreationTimeStamp is set to the current system  
\par time when the object is created.  
\par  
\par When the subscription version is modified for any reason, the  
\par subscriptionModifiedTimeStamp is updated with the current system  
time.  
\par  
\par When the subscription version is broadcast to Local SMSs via  
\par the NPAC to Local SMS interface, the  
subscriptionBroadcastTimeStamp

\par is updated with the current system time.

\par

\par When the subscription version has its version status set to old,  
\par the subscriptionOldTimeStamp is updated with the current system  
\par time.

\par

\par When the subscription version has its version status set to cancel,  
\par the subscriptionCancellationTimeStamp is updated with the  
\par current system time.

\par

\par When the subscription version has its version status set to  
\par conflict, the subscriptionConflictTimeStamp is updated with the  
\par current system time.

\par

\par When the subscription version is disconnected and the version  
\par status is set to old, the subscriptionDisconnectCompleteTimeStamp  
\par is updated with the current system time.

\par

\par When the subscription version status is set to disconnect pending  
\par the subscriptionEffectiveReleaseDate is set to the date the  
\par disconnect should be broadcast.

\par

\par When the subscription version in a cancel-pending  
\par state is acknowledged by an old service provider SOA, the  
\par subscriptionOldSP-CancellationTimeStamp is updated with the  
\par current system time.

\par

\par When the subscription version in a cancel-pending  
\par state is acknowledged by a new service provider SOA, the  
\par subscriptionNewSP-CancellationTimeStamp is updated with the  
\par current system time.

\par

\par When the subscription version in a conflict state is removed  
\par from conflict by the old service provider SOA, the  
\par subscriptionOldSP-ConflictResolutionTimeStamp is updated with the  
\par current system time.

\par

\par When the subscription version in a conflict state is removed  
\par from conflict by the new service provider SOA, the  
\par subscriptionNewSP-ConflictResolutionTimeStamp is updated with

\par the current system time.

\par

\par When the subscription version status is failed or partially-failed,

\par the subscriptionFailed-SP-List is populated with a list of the

\par failed service providers.}

{\f2\fs18\revised\revauth1\revdtm1177064020\cgrid0

\par The Service Provider SOA can M-GET and M-SET

subscriptionVersionNPAC

\par objects via the SOA to NPAC SMS interface (SOA Management

Association

\par Function). Rules for M-SET are described below.

\par

\par For M-GET requests, the filter will support all attributes for

\par a specified ported TN.

\par

\par Any service provider SOA can view any subscription version for any

\par ported TN (SOA Management Association Function).

\par

\par Subscription versions are created on the NPAC SMS via actions over

\par the SOA to NPAC SMS interface to the InpSubscriptions object (SOA  
\par Management Association Function). New service provider SOAs must  
use

\par the subscriptionVersionNewSP-Create action and old service  
\par provider SOAs must use the subscriptionVersionOldSP-Create action.  
\par Creates can only be performed provided there is only one  
\par currently active subscription version for the TN.

\par subscriptionPortingToOriginal-SPSwitch can only be specified as  
\par TRUE for a TN that is currently ported and is being ported back  
\par to the original service provider. If the value of  
\par subscriptionPortingToOriginal-SPSwitch is TRUE, the LRN and GTT

data  
\par should not be specified. This data is not specified because  
\par when the activate occurs for the subscription version, the Local  
\par SMS will receive requests to delete the old subscription version  
\par routing data in their networks and they will not receive any  
\par new network routing data for the subscription. Concurrence from the  
\par old service provider is required.

\par If the port of the subscription version is an intra-service  
\par provider port, the new service provider SOA can use the  
\par subscriptionVersionNewSP-Create action specifying the old service  
\par provider equal to the new service provider. In this case, the  
\par old service provider create action is not required and processing  
\par proceeds after a valid pending version is created in the same  
\par manner as it does for inter-service provider porting.

\par Once a version has been created that passes validation, the  
\par subscriptionVersionNPAC object subscriptionVersionStatus will  
\par be set to pending and an object creation notification will be sent  
\par to both old and new service provider SOAs. If a version  
\par previously existed, attribute value change notifications will be  
\par sent to both old and new service provider SOAs.

\par If there is a pending version that does not have concurrence during  
\par the "Service Provider Concurrence Window" specified in the Service  
\par Data table, a subscriptionVersionNoConcurrence notification will be  
\par sent to the service provider SOA that has not responded. The  
\par subscriptionVersionStatus will be set to cancel-pending if the new

\par service provider SOA has not responded or to conflict if the old  
\par service provider SOA has not responded after the "Service Provider  
\par Concurrence Failure Window" specified in the Service Data table.  
\par An attribute value change will be sent to the service provider  
\par SOA that sent the original create request.

\par The Service Provider SOA can M-SET attributes associated with  
\par pending, or conflict subscription versions (SOA Management  
Association  
Function).

\par Attempts to modify an active, sending, failed, canceled, cancel-  
pending,  
\par disconnect-pending or old version using M-SET will result in  
\par an access denied error.

\par Modification of an active subscription can only be done by the  
\par current/new service provider SOA using the  
subscriptionVersionModify  
action.

\par The modify action can be used by both old and new service  
\par provider SOAs to update pending or conflict subscription versions.

\par Old service provider SOAs can only modify the following attributes:

\par subscriptionOldSP-DueDate  
\par subscriptionOldSP-Authorization  
\par subscriptionStatusChangeCauseCode

\par New service provider SOAs can only modify the following attributes:

\par subscriptionLRN  
\par subscriptionNewSP-DueDate  
\par subscriptionCLASS-DPC  
\par subscriptionCLASS-SSN  
\par subscriptionLIDB-DPC  
\par subscriptionLIDB-SSN  
\par subscriptionCNAM-DPC  
\par subscriptionCNAM-SSN

\par subscriptionISVM-DPC  
\par subscriptionISVM-SSN  
\par subscriptionEndUserLocationValue  
\par subscriptionEndUserLocationType  
\par subscriptionBillingId

\par The subscriptionOldSP-DueDate and subscriptionVewSP-DueDate  
must  
\par match. Validation will be done for both old and new service  
\par provider data that is specified on an M-SET. If validation fails,  
\par no changes will be made and a processing failure will be returned.  
\par If the version passes validation, the version status will be  
\par set to pending. An error message will be returned to the service  
\par provider if the status is not pending when they attempt to change  
\par the version status to cancel-pending.

\par Once a pending version has been created, the new service provider  
\par can activate the subscription version if authorization for the port  
\par has been received by the old service provider within  
\par the "Service Provider Concurrence Cancellation Window".

\par Once the version is activated, the version status is set to  
\par sending, the broadcast time stamp is updated, and creates  
\par are sent to the Local SMSs.

\par If the create requests are successful for all Local SMSs, the  
\par version status will be marked as active and the previously active  
\par subscription version will have its version status set to old.

\par If create requests fail for a subscription version after the  
\par retry periods have expired, the version status will be set  
\par to failed or partially-failed based on if the download failed  
\par in all or some of the Local SMSs respectively.

\par A status version attribute value change will be sent to both old  
\par and new service providers when the subscriptionVersionStatus is  
\par modified. If the version status is failed or partially-failed then  
\par a list of failed service providers is provided in the  
\par subscriptionVersionStatus notification.

\par

\par A subscription version can be put into conflict by either the NPAC  
\par SMS or by the old service provider explicitly setting the  
\par subscriptionOldSP-Authorization off or by not responding with the  
\par subscriptionVersionOldSP-Create action.

\par If the old service provider explicitly sets the  
\par subscriptionOldSP-Authorization off, the  
\par subscriptionStatusChangeCauseCode must be given.

\par The old service provider can only put a subscription version into  
\par conflict once and only by explicitly setting the  
\par subscriptionOldSP-Authorization off.

\par A service provider should acknowledge the conflict resolution pending  
\par state within a tunable time frame specified on the NPAC SMS  
\par with a conflict resolution acknowledgement action.

\par A service provider should acknowledge the cancel pending  
\par state within a tunable time frame specified on the NPAC SMS  
\par with a cancel acknowledgement action.

\par If a service provider SOA fails to acknowledge the cancel pending  
\par state, a subscriptionVersionCancellationAcknowledgeRequest is  
\par sent to the service provider SOA. If they do not respond to this  
\par acknowledgement in a tunable time frame specified on the NPAC  
SMS,  
\par the version status will be set to conflict.

\par Attribute value change notifications will be sent to both service  
\par provider SOAs when the following attribute values change for  
\par a pending, cancel-pending, conflict or disconnect-pending  
subscription

\par versions:

\par subscriptionNewSP-DueDate  
\par subscriptionNewSP-CreationTimeStamp  
\par subscriptionOldSP-DueDate  
\par subscriptionOldSP-Authorization  
\par subscriptionOldSP-AuthorizationTimeStamp  
\par subscriptionStatusChangeCauseCode

\par subscriptionVersionStatus  
 \par  
 \par Object creation notifications will be sent to both old and  
 \par new service provider SOAs when a subscriptionVersionNPAC  
 associated  
 \par with their Service Provider id is created. Object deletion  
 \par notifications will not be used. Objects will only be deleted by the  
 \par NPAC SMS as a result of housekeeping processing.  
 \par  
 \par Prior to when the subscription version status is set to disconnect  
 \par pending or old, the subscriptionVersionDonorSP-  
 CustomerDisconnectDate  
 \par is sent to the donor SOA informing the service provider of the  
 \par actual customer disconnect date.
